I have the TH235. I don't think you can charge the standard NiCd
battery any other way except with the wall-wart. 25 hours is a
ridiculous length of time; it's the only real shortcoming the rig has.

However, since I don't use the rig a lot, I rely entirely on the BT-10
pack, filled with alkalines. I guess you could put in AA NiCd's, but
the alkalines offer more capacity, and they don't self-discharge. I
have had a set of C size alkalines in a flashlight for five years now.
It gets used less than an hour per year (primarily during Field Day)
and the light output is still pretty good. That's a long shelf life.

Given the amount of use my HT gets, I'm sure I'll get a year or more
from the alkalines, as opposed to having to remember to charge the
NiCd's every three months or so, even if I don't use the HT at all.
Also, I just bought an alkaline battery pack for my wife's cell phone
for the same reason.

Duracell just announced a new alkaline with 50% more capacity for 20%
more price, tipping the balance even more in their favor.

Opinion: Alkalines rule. NiCd's suck. :-)

Has anyone else encountered the squirrely display that is intermittent.
Mine powers up fine some times, other times it display all the characters on
the screen or bits & pieces of the display.
A good whack will clear it up once in a
while.....

I have heard Kenwood has never been able to identify the problem and/or fix
it.

So, has anyone else figured out how 2 fix it?????

It's beginning to be a pain in the BUTT!

Thanx,

Dennis

For Tom,
Just wanted to say that I have custom built many of these amplifiers and
they are very good. I have several people on the air with them mobile for
the last 4 years or so and not one of them has ever broken down. I highly
recommend the optional bandpass filters though. They require about 30 watts
drive for about 500 watts. Good luck on your choice there.... 73 de W7AX,

Sorry, Larry, but 56K is quite fast enough for an internet connection.
There are several repeaters and systems up in my area running today, and
the long term goal is for a full T1 connection via radio (at about 5.7
GHZ).

I said cheap shot because its always easier to come along ten years later,
make improvements based on what has been learned with an earlier
experience, and then crow about your "superior" system - both of which
will likely be supplanted by new wider digital formats anyway. As for the
Amercians doing nothing, they've been working on high definition new
formats for at least the past decade, which I'm sure you know already. And
I haven't done anything about it because I'm not American, nor do I work
in the broadcasting industry.

>I notice whenever anyone has the effrontery to criticise anything
>American, it's always "a cheap shot".

Naw, the Americans can look after themselves, but it was a cheap shot
nonetheless.

I have told this story before. Someone wrote and asked me to re-run it
from time to time. this seems like a good time, so here goes:

A few years ago a young man was at VE at a test session taking the 13 WPM
test. He was legally blind, could have easily obtained a waiver, he did
not want, or need one. As the code tape was playing he had a legal pad and
a felt tip pen with which he wrote the code down, 3-4 characters a page
while all the while flipping pages in the pad. When the tape was over, I
read a question to him, he flipped through the pages until he found what
he was looking for and I would re-read the question along with the choice
of answers, it was multiple choice. He would write the # of the question
and his answer on a page of the legal pad. When he was through I had no
trouble reading his answers, or going through the code he copied and
reading it. He got 8 of 10. He moved after that but I heard he upgraded to
Advanced.

After that, we coordinated on 2 meters while he walked me through in
connecting with his computer, an IBM Compatible, through the phone lines.
My computer back then was a Tandy 2000. It was my first modem connection.A
very brillant young man, who did not let his lack of vision slow him down.

And indeed DTV terrestrial broadcasting starts here in October of this year,
which will neatly leapfrog your primitive analog system. But tell us, Walt, what
sort of color TV did you have in 1954? We had NTSC, you had zip. Being first
sometimes means you don't get to take advantage of an incremental improvement
like PAL due to installed base.

>Maybe some day, too, you will have a 100% digital telephone trunk

We've had cat converters and lead-free gas for 25 years. The only place
you can find leaded gas in the US today is at an airport. Seems you don't
know what you're talking about.

>on cars don't flame me :)))

The only real benefit to leaded gas is reduced valve wear in certain
older engines. For the past 25 years, we've used hardened valves
and seats which no longer require lead as a lubricant. There are
other ways to boost octane for the high compression engines which
need it than by adding tetraethyl lead.

What your mechanic was probably trying to say is that engine
efficiency is directly related to compression ratio. The higher
the compression ratio, the better the engine's efficiency *can
be* (though it isn't always better in practice, depending on other
design tradeoffs). When lead free gas was introduced, most
engine makers dropped the compression ratio of their engines
from 10:1 to 8:1 because of fears of pre-ignition. But compression
ratios have gradually moved back up as reformulated fuels and
better combustion management systems have become available.

For a given compression ratio, you get best performance by
using the *lowest octane* fuel which does not cause pre-ignition
(knocking and pinging). That's because lower octane fuel has
more BTUs per pound than higher octane fuel. That's something
the fuel companies really don't advertise because they'd like you
to pay extra for higher octane fuel you don't need in the mistaken
belief that it'll make your car run better. It won't.

The best person to go to is yourself. Use a good threaded newsreader with
a regular expression filter capability and you won't see this sort of thing. A
good newsreader allows you to customize what you see so that *you*
determine what you get from a newsgroup, or collection of newsgroups.
Rather than depending on someone else to be your nanny, you can make
your own choices. Freedom, what a concept!

Actually, most supposedly linear amplifiers could use some feedback,
negative feedback to be precise. Running a supposedly linear amplifier
open loop isn't a very good idea.

Set your scope to trigger off the AC line. I think you'll find these
spikes will then stand still. You've got a nasty ground loop in
your setup somewhere, and it is causing the slicer to false
on peaks.

Nobody is disputing it. I think Walt's point was that (a) PAL is
significantly less prone to messing up the colo[u]r, and (b) the extra
100 lines make a significant difference to the vertical resolution.

I will refrain from comment on SECAM.

Actually, we did. A number of initiatives going under the heading of ATV
(Advanced Television) have been implemented over the last 20 years
which have markedly improved our analog TV system. The most important
of those is probably the mandatory adoption of RS-170A as a synchronizing
standard. In addition, the near universal adoption of comb filtering to remove
the herringbone rainbow artifact has been a large improvement. And we've
inserted the VIR pulse in the vertical interval so receivers can maintain
correct hue and saturation of broadcast pictures. There have been a
number of other improvements as well, but those three have changed
NTSC from Never Twice the Same Color to Now Truly the Same Color.

But of course DTV will obsolete all of that.

Whatever became of the comeback of Atlas which restarted a couple of years ago?

I know they were taking orders for their new transceiver, but that was the
last I heard of Atlas.

Thanks

Tom

Gas as far as I remember never had lead in it. The good thing about gas is that
is is so much cheaper than other fuels for central heating. Much of the UK
electricity supply comes from burning gas as we have large reserves.

Wow! Awesome review! Thanks!
Since I don't yet understand the technology this may be a ridiculous question, but could one run two one the same line and thus remove a second source of severe noise as you describe?
I understand that these devices do cause a measurable loss when they are inserted, but then they make it possible to hear a signal that even without the loss was unreadable - I presume there is a bypass switch that removes the device and also any loss if desired? Thanks again & 73, DavidC

In article <tPtH.91$sL3.1339022@news.inreach.com> (posted to rec.radio.amateur.equipment on Sat, 21 Feb 1998 05:42:49 GMT), "Greg Ottria" <Gottria@Inreach.com> writes:

= I noticed that when the 32 is fully reset that the 440mhz is on the left
= side and the 144 mhz is on the right side. I know that they can be switched
= by holding down the Band button and turning on the power. But I noticed
= that in the specifications section that the "Original band is less that
= 0.16uV" and "Opposite Band is less than .032uV" Well is the "Original band"
= the default settings of 440 on the left and 144 on the right? Does the
= sensitivity go down if their switched? Or do they just mean selecting a
= band (using the band button) other than what was set for that side?
= Understand??? Cause I don't

The IC-W32A appears to have two essentially independent transceivers--

a first transceiver optimized for VHF use (the one that covers the air band, the weather channels, the 2m ham band and vicinity (136--200 MHz), and the 70cm ham band and vicinity (435-455 MHz)), which is by default assigned to the right-hand display and "dial", and

a second transceiver optimized for UHF use (the one that covers the the 2m ham band and vicinity (136-200 MHz), the 300-400 MHz band, the 70cm ham band and vicinity (400-600 MHz), and the 600-1000 MHz band), which is by default assigned to the left-hand display and "dial".

Note that both the VHF-optimized and UHF-optimized transceivers cover both the 2m and 70cm ham bands. Although, by default, the left display and "dial" corresponds to the UHF-optimized transceiver and the right display and "dial" corresponds to the VHF-optimized transceiver, you can swap these by using the "Exchanging the Displays" feature described on p. 13 of the manual. If you don't remember which side is VHF and which side is UHF, you can always tell which transceiver you're controlling by which additional bands are available when you press the BAND key, and by the beep tone you get when you use the keyboard (when you're controlling the UHF-optimized transceiver, the beep tone is higher in frequency).

I believe the reduced sensitivity spec corresponds only to using the VHF-optimized transceiver in the 70cm band or the UHF-optimized transceiver in the 2m band. I don't think it matters at all whether you've used the "Exchanging the Displays"

feature described on p. 13 of the manual.

As a practical note, in my experience both the UHF-optimized and VHF-optimized transceivers seem to hear equally well in the 2m ham band. I haven't compared them at other frequencies, nor have I tried to measure the sensitivity.

I find it interesting that ICOM specifies two different first IFs--30.85 MHz for VHF and 46.05 MHz for UHF. I suppose this could mean either (1) the 30.85 MHz IF always corresponds to the VHF-optimized transceiver and the 46.05 MHz IF always corresponds to the UHF-optimized transceiver, or (2) the 30.85 MHz IF is always used when receiving VHF frequencies and the 46.05 MHz IF is always used when receiving UHF frequencies. I wonder which? I tried to find out by listening for some IF leakage using another radio , but couldn't hear any. I suppose I can find out by looking for images. It might matter because if it's the former, you might be able to eliminate an intermod or image problem appearing on one transceiver by selecting the other one.

From: "Richard C. Mumm" <rmumm@orednet.org>
Message-ID: <34F13763.6098B8B8@orednet.org>
Source record: 152565

Hello,

I am considering buying either short wave or ham radio equipment. I was first interested in short wave, mainly to list to international news broadcasts, but am curious to know if the same frequencies can be listened to from Ham equipment, with the obvious additional advantage of being able to communicate with others.

I have sent for a book reviewing short wave radio sets, and probably will end up spending around $250 for a good radio receiver.

I guess my question is, how much $ would it cost at minimum to get set up to do Ham radio?

Thanks.

No! the insult is the ARRL insistence that anyone who applies for an exemption is a cheat and to justify that, they demand full access to a persons medical records without any guarantee they will not be made public by the ARRL or used in a manner detrimental to that person later down the line. Ever paid for a full set of copies regarding a severe medical condition? I have and it cost hundreds of dollars. If you are disabled you will know what I mean. David Sumner is merely the Hachette man for the Board of Directors and is doing exactly what he is told by the board to do.

Receivers using comb filtering and the VIR pulse don't mess up the
colors either. The alternate line phase of PAL was once an advantage
in editing, but today with the universal use of RS-170A that's no longer
a problem for NTSC. And the extra resolution of PAL is more illusion
than reality. The 4 MHz video bandpass only allows 232 pixels per line
horizontal in either system, and NTSC has 262.5 vertical lines in a 3:4
aspect ratio, so we already have more vertical resolution than horizontal
resolution. The major difference is PAL's 25 Hz frame rate (flicker flicker)
as opposed to our 30 Hz frame rate. That's very noticable, and annoying.

2400. Icom IC-207H or triband - thoughts?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-23 00:00:00 UTC
From: ralph@hemi.com
Message-ID: <6csggl$4d@news.hemi.com>
Source record: 152584

Hello! I am considering the purchase of an Icom 207H for use in my Pathfinder. The main reason for this radio is not the features it has (or doesn't have) but the tiny detachable display that would fit perfectly on my dash and make for a very clean install. (Alas, it doesn't cover 200MHz but I can work around that somehow...)

I was wondering if any of you use/own one of these, and if so do you like it? My other option is a tri-bander of some kind, but Kenwood seems to be the only company that makes one of these (the 642A I think). If you know of any other tri-band radio's out there let me know on that too...

Thanks a bunch!

- Ralph Forsythe, KC0CSO

>
> Where did I EVER say that?

On many occasions back in June 1997, when you first dragged this dead horse
out, you were repeatedly asked when was the last VE session you administered.
You never answered. In fact, your response was, that you didn't know there
was a time factor and before the time factor was revealed you volunteered that
several other VE's had not administered a testing and they had not lost their
VE status. Interesting that you would on one hand make such comments and yet
never once answer a direct question posed to you.
>
> >No VEC may accredit a person as a VE if the person does not meet minimum

Hello all,

Have the following package with pre-owned radio and accessories For Sale (Great for the new 'ham' just starting out):

1 Kenwood TH-22ATH 5 watt 2 meter HT. Unit is in Great Condition. 9 on a scale of 1-10. Has been modified for CAP/MARS operation if needed. Includes PB-34 (5w) battery, antenna, and standard drop-in charger.

1 Kenwood PB-34 (5w) Battery (extra one)

1 Super SMC-34 Speaker Mic

1 Kendoo KSC-14 Quick Charger. Dual slot

1 Kenwood Cigarette lighter cord w/ filter

The above radio and accessories makes up the entire package. $300 (U.S.) for the package with shipping included to your door.

If interested or if you require addn'l info., please email me directly. Thanks.

GreyFox001@aol.com

2405. FS Kenwood 732 in Mint condition

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-23 00:00:00 UTC
From: Jeff Fischer <jfischer@crosslink.net>
Message-ID: <34F1CE69.1EE7FCD4@crosslink.net>
Source record: 152589

I have a Kenwood 732 with the TSU-6 Decode Tone board installed in it, and extended transmit and receive mods done to it. The radio is Mint, never been mobile, was brought home, puts some rubber feet on it and used as home radio only. Extremely clean and in excellent cosmetic, and operational conditions. I would like to get $375 for it, and will ship to lower 48 states for that price.
Leave me a note if interested, Jeff KB4MKL

I ain't laffin, I'm seconding it as fast and cheep.
HERE ARE COME CAUTIONS LEARNED:
I did it with a 10 KW transmitter and 5 gallon can, but found that it cavitated.
That is it boiled so fast near the wire that it jumped in vswr a lot way before the water seemed to really boil. A good test for antenna arcing protection though.
The fix is of course bigger electrode, and less salt. (or less power)

> If you want a cheap one that works good (only up thru 10 meters) then you
> can build one with a gallon paint can (metal) and some copper wire.
> I used to use one that I made and it worked great for years without any
> change in the resistance.

Replace the water by adding to make up for evaporation.
Do not seal or explodes!
Do not store in spot where the salt-water will cause the whole lab to be mad at you when it eats thru the can, in a couple months.

> 1. mount a chassis mount SO239 connector in the center of the paint can

> > Would like to build a 50 ohm dummy load - the kind that is made from a
> > gallon paint can, some transformer oil and a resistor.

Yeah, I bought a 50 ohm globar, but used water instead of the mineral
oil that commercials used. Oil cost to much , took too much time, and
was flamable.
But found the vswr was horrible,
Removing the resistor gave better swr, and thus the discovery it was the
water's dirt, and that adding salt was fine to home in on 50 ohms.

Hi,

Thank you for reading this message.

I am interested in the Kenwood TH-K7 transceiver and would like to
hear from anybody that has experience with this radio or any views on
it please.

Hello there,

I have for sale (or trade) the following cellular phone.

Motorola DPC-550 Cellular Flip Phone, it comes with the following accessories:

1. Two batteries, one is High Capacity, other is "Slim Line" type.
2. Car DC power/charge cord
3. Dual OverNight Charger (charges two batteries, and powers phone at the same time)
4. Original Packaging, full ESN/MSN (both are clean) info, original phone #, etc.
5. Phone is in excellent condition!!!! It is virtually new!!! (no joke)

I also have a "Test Mode" jumper installed (which can be easily removed) which enables the unit to also function as a reciever on all the allocated cellular freqs. Lots of docs are included with the phone about this. Price: $65 or trade.
If you are interested, please email me back. Thanks for reading this.

>on AM receive (seems very bassy).

The RF front end on my FT301 is outstanding, better than most newer rigs. Sensitivity is one of the best, and IMD seems quite low. Wonder what you are expecting of yours, unless it is defective? Also, AM response is fine on mine too. AM may naturally be more "bassy" depending on the TX characteristics of the transmitting station you are listening to.

The unit is manufactured in Japan under contract by Yupiteru, makers of
some of the best wideband scanners on the market. By all accounts the Rf
performance of the Relm unit is superb, not even taking its CTCSs
capabilities into account.

2418. Re: Ham Reviews of The MFJ-1026 Signal Enhancing Noise Canceller?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-23 00:00:00 UTC
From: matti@istar.ca
Message-ID: <oB5I.201$OL.658013@NewsRead.Toronto.iSTAR.net>
Source record: 152612

Hi David -

I just purchased an MFJ-1026 and spent a weekend using it. I love it!

To answer your questions: the unit can only handle 100 watts, and the manual recommends against relying on the RF sense circuitry, so I control the switching with the TR relay output from my transceiver.

I haven't used the ANC-4 unit so I can't compare, but I notice the MFJ has at least one advantage. You can control antenna gain on both the Main and Auxiliary (noise) antenna separately. I use the MFJ box as kind of an "antenna mixing board" with the Main antenna being my transmitting inverted-V, and the Auxiliary hooked up to an amplified shielded loop I made. That way I can select whichever antenna has lowest noise for receiving, and if both antennas have noise I can mix them together at appropriate levels and adjust the phase for best results.

How does it work? I couldn't believe the results! I suffer from my neighbours halogen light fixture wiping out 40 meters, a constant grinding on 20 meters that I haven't tracked down, and some other intermittent but severe problems. On 40 meters I was able to reduce S9+20 noise to S5 which is the normal noise floor here in the evening. I can make the 20m grinding disappear. On the weekend I operated a bit of the ARRL DX contest on 15m thanks to this box. HF was a real problem for me before, since I live in a high-density urban neighbourhood.

There are some limitations. I can't null multiple noise sources at once. For example, when I get rid of the halogen light noise on 40, I can still hear my computer monitor harmonics loudly since they require a different setting to null out. This is not a big deal, since I can just change the refresh frequency of my monitor to shift the interference as required. Also I can't reduce my high S5 evening noise floor on 40, which I suspect comes from the 500+ TV's/halogen lights within a block of me.

I opened the box up to change a jumper, and the construction seems to be very solid and high quality, a pleasant change from some rather dissapointing MFJ products I purchased many years ago.

If you have any questions please ask. This box has made DXing a real possibility for this urban dweller, and I worked lots of great stuff this weekend.

73,

Matti VE7BDX

HOWEVER, the unit is only a double-conversion unit-so image reception will
be a problem in signal-rich environments.
Of course, the CTCSS/DCS decode function can make the above less annoying,
but it won't eliminate it.
I'd like to see a triple conversion version of the HS200, at about the
same price.

If you intend to use it with OS/2 as a WIN-OS2 operation, while you are digging for things be sure you get a copy of the OSTSR time slice release utility. This one is free ware. At least install it with your setup, otherwise PPWIN will clobber your CPU load.

The best utility for bringing it under control in OS/2, to my experience, is the TAME320 utility, but that one will cost you a few bucks to register. It is more versatile than OSTSR and has let me do some things I needed that OSTSR wouldn't do...

Source record: 152635

Well, My opinion is that if you want one like the store bought with a resistor and oil, you would be better off to go out and buy it.
If you want a cheap one that works good (only up thru 10 meters) then you can build one with a gallon paint can (metal) and some copper wire.
I used to use one that I made and it worked great for years without any change in the resistance.
1. mount a chassis mount SO239 connector in the center of the paint can lid.
2. insert a straight piece of #12 copper wire (stripped house wire works fine) in the center conductor of the SO239 on the inside of the lid. Make it long enough so that it likes about 1" reaching the bottom of the can.
3. Form a coil of #12 bare copper (stripped house wire works fine) about 2" in diameter and 5 to 7 (not critical) turns and make it long enough that it will like about 1" reaching the bottom of the can. Hook this to one of the screws that holds the SO239 in place. Place the coil such that the straight wire from the SO239 runs down thru the center of the coil.
4. Fill the can with WATER up to within about 1" of the top of the can.
5. In a separate container, mix you some pretty strong SALT WATER about a tablespoon of salt to a half cup of water. Make sure the salt is dissolved good.
6. Place the lid on the can and attach your HF rig with the SWR meter inline.
7. Apply some Transmit power and check the SWR on 10 meters. It should be high at this point.
8. Start adding small amounts of the SALT WATER to the water already in the paint can and mix well. Return the lid and check the SWR again. You should see the SWR start to drop very soon. It doesn't take much of the SALT WATER. It's been a long time sense I did this but best I remember it took less than a tablespoon. I guess it depends on how strong you mix your SALT WATER. I would recommend using an eye dropper to add the SALT WATER.

If anybody out there is laughing by now. I hope you will give this a try before you laugh too much.
IT WORKS GREAT.

Hey!

I have a Yaesu FT-911 but it has no 1750 for opening repeaters here in Europe. I have a vague memory of all it requires is to move a soldering jumper on the CPU-board. But this information was for the FT-411. Can anybody help me out on this? I know that it is the "monitor" switch that is used. But how do I transform it from monitor to toneburst operation?

Source record: 152638
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

For Sale: Johnson Viking Adventurer c.w. transmitter.

This unit is in excellent condition. Looks more like ten years old than 30 to 40. Although it won't be mistaken for new by any means, the cosmetic flaws are easily dealt with for restoration. Looks complete, front panel unchanged. The only change I can see is the substitution of an SO238 for the original RCA socket antenna connector.

I cannot attest to the circuit. I do have a copy of the "Assembly Details" (assembly and operating instructions, circuit description, assembly diagrams and photos). Also a copy of the Assembly and Operating instructions for the modulator (I do not have a modulator -- only the instruction sheet) will be included.

This should be a very easy restoration and a little c.w. transmitter that will load anything from bedsprings to door knobs.

In the next day or so, I will post some digital photos at alt.binaries.pictures.radio

$150.00 plus $12.50 UPS for stateside delivery.

Thanks,

David, WA7ZYQ

Cross-posted to: rec.radio.amateur.equipment,ba.forsale

```
Qty Description
--- -----------
Hand held radios:
(2) Kenwood TH-21AT hand held radios w/leatherette cases
(2) Kenwood HMC-1 headsets with VOX for TH-21
(2) Kenwood DC-21 mobile battery eliminators for TH-21
(2) AC chargers for TH-21, one good, one questionable

Mobile radios:
(2) Icom IC-22S, one works, one needs repair, with diagram.
(1) Mobile mounting bracket for IC-22S.
(1) Cal-Amer 10-80 mobile SSB/FM amplifier (5-15W in, 80W out)

Details:
TH-21AT is a 144-148MHz synthesized mini FM transceiver with 1W
output (150mW on low power). With touch-tone keypad on front.
Approximate dimensions are 2.6" wide x 5.0" high x 1.3" deep.
Frequency entry is via thumbwheels on top.

IC-22S is a diode-matrix programmed 22 channel FM mobile. I
believe these have 10W output. Good solid radios. I liked the
first one so much that I bought another. One died, and I have
not taken the time to look at it. These have rubber feet for
base station use.

All work great (exept as noted), and all are in excellent
physical condition. I'm moving, and need the money more than
the radio gear.

Asking price: $200 for everything (includes shipping/C.O.D.)

Just about everything's illegal in Canada.

I've been led to believe that, provided all the traffic
passed over any (theoretical) Internet/Amateur Radio
interface is originated by and destined for licenced
Radio Amateurs, then such an interface would not
be illegal.

Then should it happen that BT is so ill advised as to
drop local call charges, I hope the ISPs do introduce
connect-time charges.

2453. For Sale: 10 meter rig

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-24 00:00:00 UTC
From: zbecker@mailhost.net.nospam
Message-ID: <6cvjj2$e2g@news.wesleyan.edu>
Source record: 152347

For sale in CT:

Radio Shack HTX 10 meter rig
-USB/LSB/CW
-25w and 5w output
-All solid state
-Comes with mobile-mount bracket
-Requires 12 volt DC power supply

Features 10 channel memory and microphone with up/down selector.

Asking $175/bo. Will deliver free locally or you pay to ship via your choice. Used only briefly, but worked some great DX. Still in great condition; an excellent starter rig, or addition to the vacation shack, as well as a mobile rig. Great for working DX as the sunspot cycle gets into high gear again. Reply via email for more info.

To reply remove ".nospam" from address.

2454. FS: Yaesu FRG-100 Shortwave Receiver

Greetings,

I have for sale a Yaesu FRG-100 general coverage table-model shortwave receiver. Radio covers 50 KHz - 30 MHz in AM, USB, LSB, CW. Will also receive HF FM signals with optional FM board (not included).

Radio was purchased new by me approx 2 years ago. It is in excellent condition with no scratches or blemishes. It has seen minimal usage. Radio can be computer controlled with Yaesu CAT interface (not included in this sale).

Comes with original box, manual, 12 VDC power supply, and schematics.

Asking $475.00 plus COD shipping, cash or money order. If interested, please respond to my E-mail address only. Thanks for reading.

2456. Has anyone connected a TNC to an Icom 706 Mk II?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-24 00:00:00 UTC
From: kr4wm@bigfoot.com
Message-ID: <MPG.f5d436ffc1646f9896a8@news.infoave.net>
Source record: 152350

I see in the book that they show all connections being made through the microphone connector. I wonder if you could connect your TNC to the mike connector on the rear, and the mike to the connector on the front, and not have to switch anything? (keep both hooked up all the time?)

I once tried connecting my TNC to my Icom 735 through the ACC connector on the back, and could not get enough audio to drive the TNC. So, I'm skeptical that the ACC connector on the 706 or the mike connector (either one) will have enough oomph to drive the TNC, and that I may have to draw audio from the speaker jack in any case. Is that the way this is going to have to work?

Input appreciated- snake's already bitten me once- don't want it to happen again- these RJ-45's are too much trouble to put on to be installed incorrectly! I want to do it right the first time, unlike the trial and error I had with my 735.

Thanks! -Web

Yep, this seems to be some kind of problem with them. I have some notes at
http://www.al-williams.com/wd5gnr about this and how to exactly replace it.

One of the guys around here said that if the replacement is done correctly,
the battery won't fail again. I have also heard the problem comes from
turning off the external power and not the power switch. Don't know if
either of those stamtements is true!

I sold mine about 3 years ago for $2250. It was mint and had come back from Alpha for the third time and was up to "Alpha 89 specs", no charge. I heard it went back again about a year ago and is now really up to 89 specs, again no charge. Go figure. I would say that since it has a lifetime warranty, it's still worth around $2000 to $2300. If you're buying one you might check with Alpha Power on status of the unwritten lifetime warranty on these turkeys.

Diesel the fuel of the future? Not likely....Hydrogen is far more likely
as a fuel of the future than any fossil fuel, especially when the only
byproduct is water.

Actually, there is argument for completely flat rates at the national
level for telecommunications - i.e. no toll charges for long distance at
all both in Europe and America.

I find it difficult to understand your hostility to flat rate local calls,
though. What is your basic objection?

It seems to work just fine in North America.

>They're totally anti-diesel over there as well.
>I'm told you can't buy it unless you own a lorry
>(truck).

What a silly idea! Of course we can buy diesel wherever we want. There are some of the older VW Rabbit diesels running around here, plus the odd Mercedes. Where on earth do you guys get these far-fetched notions about North America?

The reason diesel isn't very popular is because:

1. It stinks more than gasoline when the engine is running,
2. Diesel engines produce less power than equivalent sized gasoline engines (in
cars, anyway),
3. Diesel engines are harder to start in cold weather,
4. Diesel fuel here costs about the same as gasoline
5. Diesel engines are generally noisier than gas ones.

I suspect point 4 is the deciding one, though.

Dennis,

My understanding of the problem is that corrosion develops in the
ribbon cable connector to the front panel. A squirt of Deoxit should
take care of the problem in short order.

Good Luck & 73,

Tony N8SNC

Its the crummy connector between the display and radio. Its surface
mount. Its a difficult fix, but I jumped across the connector
with 2" span of wirewrap wire. Never a trashed display now.

> in editing, but today with the universal use of RS-170A that's no longer

Down here in Europe we say Never Twice the Same Colors vs Perfect Art Lines ;-)
Pse no flames, just kidding... We don't even have PAL in France, but SECAM...
Well my SONY camcorder uses PAL and my TV set can understand both.

> a problem for NTSC. And the extra resolution of PAL is more illusion
> than reality. The 4 MHz video bandpass only allows 232 pixels per line
> horizontal in either system, and NTSC has 262.5 vertical lines in a 3:4
> aspect ratio, so we already have more vertical resolution than horizontal

Hmm, 100 vertical lines are 100 lines more !

> resolution. The major difference is PAL's 25 Hz frame rate (flicker flicker)
> as opposed to our 30 Hz frame rate. That's very noticable, and annoying.
>
Hence the 100 Hz digital TVsets which double the image scan rate, no more
flickering at 100 Hz, 60 Hz is not even enough, 50 Hz is terrible...

It seems that the TV standards scan rate used to be matched with the mains AC
frequency to cope with the electromagnetic field produced by the transformer
and generating beat distorsion in the images. At least with matched scan
rate, the distorsion was stable...
I guess it is no more a provblem as of today, considering the multiple
scan rates of PCs. Transformers are probably well shielded.

These days, TVs and monitors don't use 60 Hz transformers at all.

A TV or fixed-frequency computer monitor typically runs the horizontal sweep off rectified line voltage, and derives all of the other voltages it needs from extra windings off the horizontal sweep transformer. So any magnetic interference is phase-locked to H sweep - no beat frequencies possible.

Multiscan monitors are a bit more complex since the H sweep has to operate over a wide range of frequencies. They typically use a separate oscillator, still at relatively high frequency, for the power supply.

Even back in the very early days of video, depending on the vertical sweep to be the same as the line frequency couldn't have worked for network programming. The local electric grids in various parts of a country as large as the US or Canada are not locked together, yet all TVs were locked to the sync generator at the studio where the TV cameras were located.

Dave

Looking for comparative comments for the
Yaesu FT-900CAT
Icom 706MKII
Kenwood 570D

Assume for the moment that 6m and 2m isn't important,
and that the rig is to be used only for base operation.
The rigs are comparably priced, with some differences
in features: antenna tuners, DSP, etc.

How do these rigs compare? (receiver performance,
ease/comfort of operation, quality/reliability, etc.)
If you have experience with more than one of the above,
I'd like to hear from you.

Thanks.

Mark Molus

What problems (apart from not being licensed for use in UK) would a American transmitter/ receiver handhelds operating between UHF 462.5625 - 467.7125 have. I see no reason why they won't work in the UK - but is there any 'registered' traffic already using this frequency.

The units in question are made by Motorola and have a range of upto 2 miles - and are in quite common use by walkers, bikers and skiers .

Please excuse my ignorance, this is all new to me.

Thanks

During about 10 years have lost money with the Radio
the emissions were all cultural.
In SPAIN do not have COMPANY FREEDOM and by so many can not mount A commercial
network by administrative and bureaucratic problems.
This is due to the fact that to obtain a frequency one must go through a
contest I publish And here it is when appear The problems.
The speculators, those which do business without having interest in the radio
emissions, alone want the grant for power to sell it, even to coast of bidding
farewell to all The insole of a network that operate well, it is preferable
that all controlled este by the large chains and thus to remove the natural
right to the FREE EXPRESSION and COMPANY FREEDOM.
It is easier to control to a chain than hundred Independent radio, the radio
networks Are considered but a form of washing the brains that a form of social
expression.
In this country to nobody is pursued to himher you by their its political
ideas, is not given to himheryou frequency And is remained without issuing
in radio, without work and if protests put you a fine of 67.000 $dollars And
if do not pay to the jail, that if this is a democracy and all is going well,
very well.
So that then they arrive to you the rumors of the fact that before of the
contest publishes, the frequencies already it Has been given and to the
friends of always, if this finally is going to seem a republic ++Bananera.
We have lost the @@expensa of reissuing in a way commercial and power to live
of our Work, hard work and not always well-paid, but we are some professionals
of the radio And we do not know to make nothing but, alone radio and
television, but finishes esta is worse still.
We are professional of the communication cloral and our goal is the prompt
breach.
During the radio emission of makes some months a key beam on the repeater of
the destruction network our unit of power, to prescribe it of the liaison
and the antenna of the same, remained destroyed,
The cost of the nevosa equipment is superior to 8.000 dollars.
We do not have money for power to pay the new equipment and we leave with 38

courtyards in cute Forcing to the network so that this, draw all what could, with noises provoked by The regulation upon having the issuer to less of 5 meters of the audio equipment.
Please if you can help us sends us at least 10 dollars, if not the commissions
of the Banks is quedarian with all money and not us llegaria given, if you are many Could buy a new issuing of radio in fm (88 - 108 mhz) commercial band.
Not pens&#65533;is that we want to earn money, with this proposal, we would prefer an equipment such as the one which were having before, compound by
Codificador st&#65533;reo
Commercial issuer of 30 watts commercial band 88 - 108 @@mhz power Unit of 1000 watts
Liaison unit (network and receiving) commercial band 890 @@mhz 4 dipolos of vertical polarization - horizontal with 8 db of profit.
That we can offer you, few thing but if someone wants that theirits your his maqueta, theirits your his disk Theirits your his cultural association, to spread some ideas, theirits your his form of thinking make known some movement, cultural trend ect as long as this ideas will be LEGAL, we can help you we.
We have opened I number an of account in a bank, where be able to do The income, almost that it will be will be well received.
If @@disponeis of radio equipment, much better
They are accepted from 10 dollars (recommended at least 15 or 20), we need 8.000 @@dolares or a new equipment.

<snip>

My comment was aimed at the poorer fuel consumption experience after
the introduction of catalytic converters (not at the use of unleaded
fuel)....my original posting underlined the cat converter with the
^^^^^ symbol but it did not come out that way on the newsgroup!

When questioning the dealer who supplied our latest car (a 1.2 litre
General Motors thing) about the poor mpg (only 32 in the city and a
bare 40 to 42 on the motorway) and comparing this performance to our
previous car, a Fiat of the same capacity (44 in town and 56 mpg on
the open road) we were informed that catalytic converters degraded
mpgs by as much as 30 percent or so...

Anyway, what's this to do with amateur radio? :))

Well you may very well end up transmitting through a police personal
radio system - that part of the spectum is where the input channels for
said system are (amongst other things).

I would suggest *not* using that equipment on those frequencies within
the UK.

Thank you very much for taking the time to read this.

I have recently purchased a second hand AMP (FL7000) and it is running off my FT990.

I need someone to help me out regarding certain points eg the tuner.

There are a few things that I just cannotunderstand Iwould be extremely grateful if you have the same gear as me and would,nt mind answering just a few qustions.

I look forward for your help.

Jim ZL2BMH.

2509. Looking for hams using Ilyama Visionmaster Pro 17 and Dell 300

Going to be purchasing the IIyamva Visionmaster Pro 17 and was concern about how much RFI it produces on the ham/shortwave bands. I know some monitors are better then others. Being in an apartment I'm limited to inside antennas.

Also probably will be looking at the Dell computers also.

Thanks
Steve

HUH?

Leaded gas was very cheap petroleum distillate (low octane=~70 or so)
spiked with tetraethyl lead -- (CH_3CH_2)_4Pb -- as a cheap way of
bumping the octane up. 15 drops of tetraethyl lead added to a gallon
of 70 octane gasoline would bump the octane up to 100. This was great
until the lead started damaging the environment. Then we had to pay
more for higher quality gasoline with more expensive additives (like
Methyl-tert-butyl ether -- MTBE).

As far as I know (still a student pilot) 100LL Av Gas (100 octane low
lead) has no lead in it at all, but the name is still used from when
there were several varieties of Av Gas available (At least that's what
the guys at the air service tell me).

I don't think gasoline was ever made from coal -- at least not in any
commercial quantity. It was considered back in the 70's when gas
prices were skyrocketing, but petroleum based gasoline would have had
to go up to $3.00/gal (1970's US dollars) to be cost effective.

God gave you a free will, and the "democracy" you complain about not having is, in fact, exactly what you do have and is persecuting you. Why haven't you simply moved to another country? You could qualify for a station license with hard work and only the usual amount of beauraucatic politics, and wouldn't have to look for handouts to have a voice.

Interesting point that. In fact our local Sainsburys has started selling
'low sulphur - City Diesel' I asked what this was all about and was told
that it is being introduced across the country, although this is the
first time I have seen it. Price is 1p/ltr on top of normal price. Small
price to pay for lower emissions? I really wanted to know what 'exactly'
is the composition of it? On my Open Uni degree course this year we have
been looking at alternative fuels and one of them is an alternative
diesel fuel derived from rape seed oil. Apparently called 'bio-diesel'
it has very low sulphur emissions, low particulate discharge but stinks
like rotten cabbage when used! I also wondered about performance so such
fuels? Although the local bus company is using this low sulphur diesel
to such an effect that all the taxi drivers are using it, but it seems
that they think it gives better MPG than normal diesel.

Natural gas burns much cleaner than any other fossil fuel (CO2 and SO2)

Predictions are that current 'known' reserves will last until at least
2025

Nothing wrong with the A40. I used to have one of those.
Petrol prices then were at about the silly level they are
in the USA today so the MPG didn't matter quite so much!

My present one uses the fuel of the future - diesel.
It returns 50 mpg from a 2-litre direct-injection
engine (with a catalytic converter).

Remove both top and bottom covers.
Unplug the speaker and set the covers aside.
Lift up on the 6 tabs on the top and bottom of the front of the radio
and remove it.
We should now be looking at the back of the faceplate receptical.
Position it so that the voice modual is at the top while looking down
on it.
Below and to the left of the modual is a V shaped copper spring.
The resistor we want to remove is in the 0 (zero) position
Remove nothing else.
Do a full reset per the instruction manual
You should now have 300 to 470mhz receive on UHF
410 to 470 mhz transmit.
118 to 174 mhz receive
and 136 to 174 mhz transmit.

I'd be surprised if this amp called for having the plate dipped! Select the switch position for PWR OUT, and tune for max. Then, check the GRID range. If its over 500ma, reduce the drive from the exciter. In key-down CW, 500 ma. is max..For telephany, keep the plate below 250ma.

: devices will help. URLs or schematics.... anything..

Holy Cow, Daryl, how many groups did you post this to?? Sorry...but I trimmed the response to just r.r.a.homebrew...hope that works...it seems like the right one.

You could do it two different ways...either put a transmitter on the cat, or a receiver...well, you could put a receiver-transmitter (transponder), I suppose, instead.

Transmitter on cat: you use a direction finding antenna to find the cat. You really don't need much power for this, as long as the cat isn't in the habit of burrowing underground or crawling into culverts. 1 milliwatt should be PLENTY. There's a cute Motorola IC that can do this sort of thing, crystal controlled...you could add a tiny 555 to pulse it on occasionally. Would involve some construction. 445MHz would be a reasonable frequency. And you might get interested enough in fox hunting to get involved (or start??) a local group!

Receiver on cat: (smiley face on...) You could try to whisper sweet nothings into the cat's ear through the receiver, but if he doesn't come to your calls now, he probably wouldn't then. But you could also hook it up to give him a good shock, so he'd let out a loud MMEOWLLL when you key your transmitter...making him easy to find. (Sorry...smiley face off)

Transponder on cat: Kinda like the transmitter on the cat, but there are ways you can get more info. You could get round-trip times for the RF and get an idea of range. (Tough to do very accurately!!) You could put a GPS on the cat and have it report back the location when queried. ...

OK, OK, only the transmitter seems to make much sense. Power budget: 10mW. Package it in a 9V rechargeable battery case, using 3 of the 6 cells for power (removing the others to make room for the transmitter). 100mAH...should run for quite a few hours per charge. Pulse it to extend the life further...say 5 seconds on, 10 off. Antenna can be the collar that holds the transmitter on the cat. You can arrange to recharge thru the same terminals as you use for the antenna...and those are just the battery term's.

Source record: 152465

Well first day at work with my new Icom W32A and it worked OK. But as soon as I got a call in San Francisco the damn radio was deaf. Not a thing. So I tried my mini mag antenna, even worse now I couldn't even hear the repeater!!! Went on a T-hunt Saturday night and we tried the W32 as the doppler radio and tuned it to the weather channel and it was very very weak. The Standard he used worked much better for a doppler radio. I tried the weather channel later that night and it worked fine. It seems that if the W32 is near any interference or stray RF or whatever it completely wipes out the receiver. Overload, intermod??? I have no Idea, all I know is that the radio works GREAT at home and about, but get it near RF and the dang thing is COMPLETELY DEAF!!!

Hello,

I recently attempted the expanded TX mod on my FT-8000. When I got inside the radio, I found one of the internal screws that holds the front cover on was stripped and could not be loosened. Any of you mechanical minded folks know how to loosen a phillips screw that has a stripped/worn head? This screw is preventing me from getting to the area where the mod is done.

Thanks for any advice.

2540. MY INPUT

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-24 00:00:00 UTC
From: gene <wm9h@execpc.com>
Message-ID: <6ctmfo$ecu@newsops.execpc.com>
Source record: 152469
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment

I have been reading postings in this news group for quite a while now and I have to put my input here on some unhappy results people get when they buy from someone here.

First I will say that probably 95+ percent are honest people who just want to upgrade thier equipment and sell thier old gear. The gear that gave them years of trouble free service. Maybe the new radio "bug" bit them too deep and the results are out with the old, in with the new.

Then, you have the ones who CAN'T WAIT to get thier "untrained" paws inside the rig and attempt to tweak this or that to maybe get another 10 watts output, which would be next to inpossible to notice ANYWAY. All they are doing is putting unessesary stain on some componants and creating a danger for major damage.

Oh yes, then there is the "ol-stand-by", the phrase that will me even the poorest ham come running with thier money flopping in the wind. "MY RIG IS MARS READY", all that tells me is someone put thier hands in where they shouldn't be in the first place, and if they had it in for that, who knows what ever else has been clipped, knicked, or cut from inexperiance.

I guess the bottom line is....be carefull who and where you buy your used rig from. I think almost ALL hams are honest people who take care of their equipment like it was one of thier family. Its the ones who think they know everything there is to know from day one of electronic, get into trouble with it. And in some cases, get fryed in the process. Then when they got it screwed up so bad they come on here and tell us. VERY LITTLE USE, ITS A 9.5 ON A SCALE OF 10. and so on and so on. I would NEVER buy a 1 or 2 thousand dollar pce of radio from a total stranger here and have them ship it to me. I would either have to know the person, or someone who knows them so I can find out if he/she can be trusted. And not someone who had philips screwdrivers for fingers, and wire cutters for thumbs.

like the ol saying says BUYER BEWARE.
have a good day...GENE/WM9H

No, it is not enforceable. The few court attempts have failed.
E-mail and bulk mail is NOT fax material, so the fax statutes
do not apply - even though they say that any device "capable"
of receiving faxes is included.

Until the legislators decode to do something decent, and make
such bulk mail illegal, you are going to see more and more of
the trash mail. The mailers are now good enough that it takes
a concerted effort from numerous sites to determine the actual
originating site.

Until such time - notices like the above are just a waste of
bandwidth.

From: Tom Repstad <rcc@together.net>
Message-ID: <34F26086.5B806CE8@together.net>
Source record: 152471

This is a known problem with the TM-241A, there is apparently a poor solder connection to the ribbon cable that goes from the main board to the display. Occassionally the ribbon cable may need to be replaced. If you don't want to try to fix it yourself, I think Cliff at Aavid quoted me $50-60 for the repair.

Basically the difference is "Features" Kenwood puts more bells & whistles into the higher number models,
i.e. 400 series has less features than 900 series. The '30', '40', '50's are successive models in the same line. I purchased a used TS-930S/AT .... very satisfied with it... quite a nice performer... and was fully loaded for a rig manufactured at that time.

I am posting this for a friend who has 2, like new, Yaesu FT-990's.

#1 Was purchased at Dayton last year and was meant as a backup for the other 990. It has been in the box and since the first one never failed, this one was never used. It doesn't have any options installed and the price is firm at $1360 plus shipping.

#2 Was purchased about 6 months prior to Dayton last year. It has the optional 2 khz filter installed and the price is firm at $1400 plus shipping for this one. I think this one has a piece of dust on it or something, since the filter is $140 option.

He is selling them because he wants a FT-1000 MP ... ???

Email if you are interested and I will pass the information on

I have a Kenwood TR-9000 2-meter all mode transceiver, but have misplaced all the manuals.

I am looking for the power output on the low and high setting. My meter is not well calibrated and reads about 7 watts on low (this could be 5 or 10, or even worse.)

I am considering this rig for running a 6 meter transverter, so the low power setting is of utmost importance to me.

Thanx for your help.

One of the most requested scanners of ALL TIME is here and available for your bidding pleasure!!! This is one of the Realistic PRO-2022 scanner that is sooo heavily requested because of its cellular mod ability, well you get the mod already with this scanner!! ALREADY READY TO GO!! Complete with the original box (shown) and antanna... and in EXCELLENT CONDITION!! 200 channel programmibility (20 channels in 10 banks) and TONS OF FEATURES!! You dont see em here too often, so get one while you can.. Folks, Please use this scanner only for legal testing purposes!! Winner pays shipping FOB Miami, Florida.. GOOD LUCK!!

SEE IT AT:http://iguana.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=6880799

2555. SGC 2020 Good Buy?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-24 00:00:00 UTC
From: "H.Silvia" <hsilvia@flinet.com>
Message-ID: <34F2CF80.4476@flinet.com>
Source record: 152484

I've been considering a protable HF rig for a while now and have noticed SGC's recent entry into the market, the model 2020. Has any one had any experience with this radio? Maybe it was shown at Dayton or Miami.

Hopefully this is a good laymans answer to the 706 series.

Henry

2557. FS: Icom IC-25H 2m Mobile

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-24 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <34f2d279.67146992@news.supernews.net>
Source record: 152486
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Icom IC-25H 2m Mobile:

* 45 / 5 watts output
* 5 memories, 2 VFOs, scanning
* Icom IC-BU1 Battery backup unit for memories
* Quick-release mobile mounting bracket
* Hand mike with DTMF pad
* Original box and manual
* Communications Specialists SS-32A Programmable PL Tone Encoder installed

This is an older 2m mobile rig without a lot of bells and whistles. Has been mobile most of its life so has some wear but is in very good shape. The rig works great - I've used for the last year or so with no problems. The PL Tone encoder can be changed to any of the standard subaudible tones via dip switch settings.

Would make a good starter rig or could be used as a backup or base packet station.

$150 shipped in the lower 48.

E-mail if interested

That's correct David, that's exactly my problem. What bugs me the most is
that I know the circuitry to do this is already in the radio, I just can't
seem to find a way to activate it in the VHF/UHF mode. How do I know?, well,
if you put the radio in the VHF/VHF or UHF/UHF mode (both VFOs in the same
band), the radio will blank the receiving side while xmitting (they have to
since it would take real duplexers to handle the RF with one antenna within
the same band).

Very frustrating!

Cross-posted to: alt.radio.scanner.uk,alt.radio.uk,rec.radio.amateur.equipment,ukradio.amateur

What problems (apart from not being licensed for use in UK) would a American transmitter/ receiver handhelds operating between UHF 462.5625 - 467.7125 have. I see no reason why they won't work in the UK - but is there any "registered" traffic already using this frequency.

The units in question are made by Motorola and have a range of upto 2 miles - and are in quite common use by walkers, bikers and skiers .

Please excuse my ignorance, this is all new to me.

Thanks

2561. Re: Building a Dummy Load?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-24 00:00:00 UTC
From: Al Williams <alw@al-williams.com>
Message-ID: <egX1FCTQ9GA.275@ntawwabp.compuserve.com>
Source record: 152490

The old Heath Cantenna used a really big noninductive resistor made of some carbon composite material, if memory serves. Of course, in those days xformer oil was full of PCBs....

I have heard people having success with the noninductive wirewound resistors, but note that ordinary wirewound resistors are not suitable. NI resistors have their windings alternated to cancel inductance (hmmm... wonder why they don't do that for antenna loading coils).

1KW for 30 seconds is a lot of heat. You need to make sure there is enough dissapation to handle it either oil, or forced air, or whatever. Also, you want to make sure the complex impedence of the load is as close to 50+j0 as possible. At HF, ordinary wiring and the like won't be a problem, but at VHF/UHF even a little run of wire may have significant reactance.

Regards,

Al Williams

that's your problem.

4 As here in UK, but not so in the rest of Europe
where diesel is considerably cheaper.

5 Granted. Slightly more noisy.

This isn't North America. We don't _have_ to do everything
you Yanks do.

We don't have the capacity to support all the great unwashed
being on-line 24+ hours a day. I'd rather pay for local calls
(which are dirt cheap anyway) than suffer the problems caused
by under capacity at the telephone- and ISP-levels.

Thanks 4 reading this!
I have a FT50 with ADMS 1 program and cable.
Now i bought a VX1R. It is the same cable, but a different program called ADMS 1D. When i contacted my local Yaesu dealer he said that i have to buy a new cable with the right program (just to get the right program) the cable is the same. Im asking now if any one has the ADMS 1D and let me buy, or if u could send a copy of it me at my E-Mail adress.

Thanks once again......

Christer.

Young Man,
One more temper tantrum like that and your Mommie might send you to your
room without any supper.

Naw, your not going to filter me out. You would be afraid you will miss something.

chr (34)s are free, you might want to use some where appropriate.

Far from it. Most gas stations that service the public have at least
one Diesel pump, and they certainly don't ask whether you're fueling
your car or your Kenworth truck.

The Cornell Amateur Radio Club, W2CXM is selling a Motorola R-390A/URR.
The radio is in good working condition. It is serial number 882 (from
the front tag).

You can see the radio at http://www.ebay.com

it is item unmber 6957323

Or you can search for R-390A

Bid high, and bid often, you are helping a good cause!

I don't own one yet, but I have done a search of past postings using
DejaNews. The bottom line is there are a lot of Hams out there
the love their Tentec Scout Rig. You can read it yourself by going to
this link:

http://www.dejanews.com/

If you do a Power Search you can search the current and "old" messages.
Be sure to search for both "Tentec Scout" and Ten-tec Scout".

If you plan on buying all the band modules, that would push the total
price up to around $800 (new). A new Alinco DX-70T sells for about
that price.

On the other hand, if you're a Tech Plus, like me, all you need is 10m,
15M, 40M, and 80M. That would put the total price to under $700.

I'm sorry, but I don't have the Tentec Scout price list with me so these
aren't exact figures.

73,

Bob

>Too many have died in Europe this century cleaning up
>your messes. Next time we should stay home and let
>you settle it among yourselves.

A lot of people would rather you guys stayed home from a lot of places -
Nicaraugua, Grenada, Cuba, etc. I wouldn't be too terribly smug about
WWII, either. America's lack of support for the League of Nations
certainly didn't help prevent it, either.

>And that goes for the Middle East too. We should sell
>them all the arms they have cash to buy and let them
>go at it until they all kill each other. After the glass
>cools down a bit, Bechtel can go back in and reopen

>> cars, anyway),

>True - but most diesel cars have bigger engines/turbos than petrol

>>3. Diesel engines are harder to start in cold weather,

>Wrong, thats why they have heaters! My landrover at work starts day in
>day out without a problem and thats in some of the worst weather in the
>country!

Excuse me, Simon, but I don't think you get -50 degrees C for three weeks
at a stretch in England. You do in northern BC. To get even gasoline
engines to start means plugging in circulating water heaters, battery
warmers, etc.

>>4. Diesel fuel here costs about the same as gasoline

>Cheaper here

>>5. Diesel engines are generally noisier than gas ones.

>Not true. Modern diesels are just as noisey as a 5 year old average

>your family saloon climb a 3000ft mountain road in winter!

You obviously haven't heard a Cummings Diesel in a Dodge pickup. It's
really LOUD. What's so hard, though about driving up a three thousand foot
mountain? That's not very big, as mountains go.

>>
>>I suspect point 4 is the deciding one, though.

>I have changed over to diesel in the UK because of the cost. I believe
>recent figures show an upward trend in EU towards diesel.

Many years ago, diesel fuel here was substantially cheaper than gasoline.
At one time, back in the 70's, using diesel was considerably cheaper than
gasoline. Not any more, though, so why bother with the extra cost of
buying and servicing diesels?

Hi.

My problem with IC-706:
- 2m TX not working properly (power output)
- 2m RX is too low
- All other amateur bands are working properly

The antenna is working properly. I tried with two antennas. I could use it for HTX-242 so the antenna shouldn't be a problem. Now, it must be somewhere inside, but I can't figure it out. (the cables are connected properly...)

Thanks for your help.

From: John Miles <jmiles@pop.removethistomailme.net>
Message-ID: <34F4FB67.5F46@pop.removethistomailme.net>
Source record: 152282

HP 141T configuration for sale w/the following accessories:

- HP141T analog storage mainframe
- HP8552B IF section
- HP8554B RF section (coverage to 1250 MHz)
- HP8444A tracking generator for HP8554B, 100 kHz - 1.25 GHz
- HP8553B HF section (high-resolution coverage to 110 MHz)
- HP8556A LF section (high-resolution coverage to 300 kHz w/built-in LF tracking generator)
- All operating and service manuals
- Spare storage CRT in original sealed HP carton

All units are in excellent operating condition w/good appearance, noting minor paint scratches on 8552B, 8444A, and 141T panels, and missing HP logo on 8444A. .JPG photos available on request.

This package delivers complete analysis and tracking coverage between 20 Hz and 1.25 GHz. Asking $1900 for everything, plus shipping from Austin, Texas. Unit available in Austin, TX for inspection by interested parties. (Come to Austin and pick it up, and you can have it for $1800. :)

Message-ID: <6d31u7$9ue@bolivia.earthlink.net>
Source record: 152283
Body handling: HTML body converted to readable text

The Scout uses an LC oscillator for frequency control. When it drifts a counter waits until it has drifted a prescribed amount and then sends a correction signal to the LC oscillator. On CW this results in a periodic jump in frequency that is noticeable both in the receiver and in the transmitted signal. The early Scouts were pretty bad but the later models are much improved. However I could always tell I was working a Scout even before the guy told me. I started in the days of drifty tube rigs so this never bothered me but might be annoying to those used to modern rock solid phase loop control rigs. (This only applies to CW as the jump is small and not noticeable on SSB.)

Very Neat little radio but the ones we imported do not do the 12.5kHz steps on the VHF ham band only though.....somewhat puzzling. Must be a problem with the programming inside the CPU. Does airband as well as 76-99MHz FM band but uses the supplied earphone as the antenna on the FM Band. The audio is pretty low so the earphone is the best option. Very light and a pleasure to carry around. Nice for working in conjuction with a dual-band mobile radio with cross-band repeat for increasing your distance.
Recommended for true portability.

Hope this sheds some light.

Regards,

Rob ZS5LA.

Actually, quite a few current TV sets have mains transformers in them -
somewhat to my surprise.

I don't know about SM supplies being "cheap and reliable" - to
manufacture maybe, not so much for us poor engineers who have to fix
them!

RIGHT while I have had the flue over the last few days and have not checked this little posting (which is growing into a monster !!!!) for a little while, I was amazed to see it has grown from my inital posting to 89 thus far!!!!!!!! Going from Internet access via Packet radio, somthing about govermnet should pay for everything, to TV, to Vehicles GAS etc etc etc HUH!!!!!! MAN!!!!!

OK well I found out what I wanted to find out, best help was from David TSE, and a link to force9 etc, i was able to find out that the technology IS available to actcheive FULL internet connection via Packet Radio. NOW wheather the HAM laws on Packet radio contents will allow internet access in England, and IF things might be changing (loads thing changing in this country NEW labour) new laws etc etc and wheather there is a line of site gateway from my location within say 60-100 miles of me, has all yet to be determined.

But my initial thoughts of wheather the technology exits has been answered YES IT IS. I Have found that it is Possible.

It may interest all who have responed to my initail posting that i
have found another way of connecting to the net which if is successful
will give me 120hours/month FULL internet access VIA ISP through a
MOBILE PHONE FOR JUST £32/month, which price also INCLUDES an ISP
monthly charge of £12...YES I KNOW BUT IT IS TRUE.

ITS not full free access but 120 hours FULL Internet access for £32
all in aint bad at all PLUS its legal.

So 89 Posting upto now....I wonder what the world record is on postings to a NewsNET posting is? Anyone know? Wanna Join this Fast growing Posting?

DO TRY AND KEEP IT TO DIFFERENT WAYS OF CONNECTING TO THE NET, USING ANY FORM OF TECH. RADIO, MICROWAVE, CABLE, TELEPHONE, SAT, ETC ETC ETC WHATEVER. IT MIGHT TURN INTO A USEFUL GUIDE YOU NEVER KNOW.

IF YOU CAN GATHER YOUR DATA AND POST ALL WILL BENEFIT, COULD BE GOOD THIS.WILL HAVE TO WAIT AND SEE.

DREAD TO THINK WHAT WILL HAPPEN AFTER THIS POSTING!!!!!!! hehehee

TO ALL

Cheers

IAN

I Have For Sale A Icom 251A 2-Meter All Mode Radio With Vox & With IC-HM7 Amplified Microphone.
This Radio Operates Perfect, Just Recently Used It In My First ARRL VHF Contest.
The Radio Is Very Clean & Comes With The Box, Manuals, & Schematics.
Only Problem Is That The S-Meter Is Stuck In The Middle & Was Like That When I Bought The Radio Last Year. This Radio Has A Very Sensative Receiver & Is Very Impressive On The Air. I Am Selling Because I Purchased A New Kenwood This Last Weekend. I Would Rate This Radio 8.5-9
The Price Is 375.00 PrePaid Plus Shipping.

Right, I'd say I'm glad to belong to the technology aware Ham community,
the arguments are generally based on rational physical reasons and this
is the kind of discussion I like. As opposed to the kind of discussion
some people have when arguing about the last soccer match and giving
exclusively subjective arguments (they seem to know it, and they seem
to like it).

Though I noticed in this thread some "mine's bigger" arguments, tssk, tssk...

Economy of scale, in various ways. You can get more efficiency
in a power station running at a constant and predictable average power
than in a domestic heater cycling on and off. Wherever you burn the gas it
will produce the same amount of pollution, but if the process is inefficient
you need to burn more. But it's *not* simply to produce *heat and light*
somewhere else: when was the last time you saw a gas-powered vacuum cleaner?

Does anyone know where I can get a bandswitch Clipperton-L made by Dentron. Or do you know where I can get the last wafer which is 1 5/8" between the mounting posts and 1 5/8 tall. It has 6 terminals on the top side of the lugs and one on the right hand side below the posts (looking from the fron). It has a shorting type selector that is half moon shaped and shorts 6 terminals. The ceramic wafer is 5/32 " thick.

>similar rigs I should consider? Thanks!

I had a Scout, which I used mostly mobile, and I liked it very much.
The power output is only 50 Watts maximum, but I ran mine QRP most of
the time, so that was no matter. It's a good performing rig, and if
you don't "need" all of the modern bells 'n whistles, it's possibly
the rig for you. I see a lot of them for sale used, with several
band modules, NB, mic, etc. I'd look into them, rather than buying
a new one and shelling out all the extra money.

The Scout is a good CW rig with its built-in keyer and continuously
variable Jones-type i-f filtering. Ten-Tec's QSK is legendary with
CW operators. Ten-Tec's customer service is probably the best in
the business, always something to consider when buying a rig.

As for other rigs, there are no other rigs that directly compare with
the Scout. The Scout is so simple, and all the others are complex.

Amateur radio will survive Burt and his ramblings without any problems because he comes across as a crackpot and will be treated as such by the press. The thing that bothers me is that Burt claims to be a teacher. I have to wonder how he is effecting his students with his views. I also wonder if the school administrators and parents know the type of personality that is in a position to influence young and impressionable minds?

The hydrogen fuel cell is quite amazing, but as Walt puts it nicely,

Duh! A bit confusing!

The concept fuel cell is working fine in Australia and there are a
number of websites carrying info on hydrogen fuel cells but I wonder how
much the petroleum companies would like that be put to bed!

The problem with all fossil fuels in the release of CO2 that was fixated
from the atmosphere millions of years ago in the plants and animals that
ended up as crude. We are currently releasing it much faster than it was
fixed in the first place and thats the problem.

Dunno if the hydrogen cell will ever take off but its a start!

True - but most diesel cars have bigger engines/turbos than petrol

>3. Diesel engines are harder to start in cold weather,

Wrong, thats why they have heaters! My landrover at work starts day in
day out without a problem and thats in some of the worst weather in the
country!

>4. Diesel fuel here costs about the same as gasoline

Cheaper here

>5. Diesel engines are generally noisier than gas ones.

Not true. Modern diesels are just as noisey as a 5 year old average
family saloon. And having seen some of the wrecks wandering around here,
better! Can't say my landrover is quieter though! But I would like to
see your family saloon climb a 3000ft mountain road in winter!

>
>I suspect point 4 is the deciding one, though.

I have changed over to diesel in the UK because of the cost. I believe
recent figures show an upward trend in EU towards diesel.

Natural gas is lead free! Its mostly a a mixture of methane and ethane,
it burns cleanly with minimal sulphur emssions (0.7 mg per Mjoule
compared to 910 mg for coal)

The coal gasification process that was used for town gas was terrible!
It was full of horrors and thats one of the reasons for its demise! It
wasn't really cleaner than coal but seemed that way at the time!

Reserves sizes are never fixed because:

1. Better technology to discover/exploit reserves
2. Increased price = increased profits = more investment for 1.
3. Technology increases allow exploitation of lower grade ores etc
4. Third world countries now cashing in physical resources

BTW current 'mineable' world reserves are estimated at 500 years, not
unless you want to start digging up areas of national parks etc and the
US has approx 26% of world totals giving you something around 100 years.
Certainly not the 1000 years you estimate. You are correct in the
reducing useage of coal. But only until that becomes too expensive to
mine, or the environmentalists get you!
>
>If anyone seriously cared about the environment, we'd stop greenhouse

>somewhere and put a fence around.

Yep thats right good old nuclear. What is it about americans and their
fixation with atomic anything. Its not just a few hundred pounds of hot
stuff either, its thousands upon thousands of kilos of lowgrade waste

like clothing/tools etc that need to be disposed of. And then what about the stations when they reach the end of their life, you going to bury that as well! sic. We already have enough waste to worry about. Oh and atomic energy is safe? 3 mile island and Chernobyl prove that its not and when things go wrong - as they do - then you end up contaminating billions of sqaure kilometres. Some farmers in the highlands and lakes are still not allow to sell lamb because of the high levels of Strontium 90 in the meat, caused by Chernobyl fallout.

>
>But that won't happen because 1 in 7 jobs revolves around fossil fuel
>production, distribution, and consumption. There's too much money
>and too much vested interest in keeping that system going to its last
>gasp.

Agreed.

But the US don't want to do anything about it. The 1992 earth summit proved that. The Bush administration of that time attempted to torpedoe the whole damm thing by vetoing adoption of targets and timetables for CO2 reductions even though studies showed that it was easily met. They even embarressed Willaim Reily - the US delegate - by leaking his memo to Bush saying that they could easily meet the target and could he agree to the CO2 and Biodiversity treaties.

Your latest government is pretty much of the same.

Instead of looking at nuclear/fossil fuels - we need to be looking at renewables, wind/wave/tidal/solar/biomass. They all have their own problems (environmental too) but they can cut global warming by reducing CO2/NO2/SO2 emissions. No power source can at the moment be perfect but we can improve matters, it just needs co-operation and governmental agreements, something which does not seem to happen from your side of the pond

2635. Question: Autek QF-1A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-25 00:00:00 UTC
From: Michael Melland <badger@vbe.com>
Message-ID: <34F43BA7.5185@vbe.com>
Source record: 152317

I just bought a QF-1A and tried it out last night. Not DSP but I was real surprised at how well it worked with my old rig. I notice that when I plugged in my Heil headset only one side worked. It appears that the Autek uses a mono plug into the rig and has a mono jack out to the phones or speaker. I see that Heil uses a stereo plug so I assume that this is why I only am getting sound out of one side (works fine when connected direct to rig or outboard speaker). Is this correct ?

Thanks Mike

Author: Daniel WCC, 9V1ZV
Date: 4 February 1994
Subject: Band extension mod for FRG-9600/965

Foreword

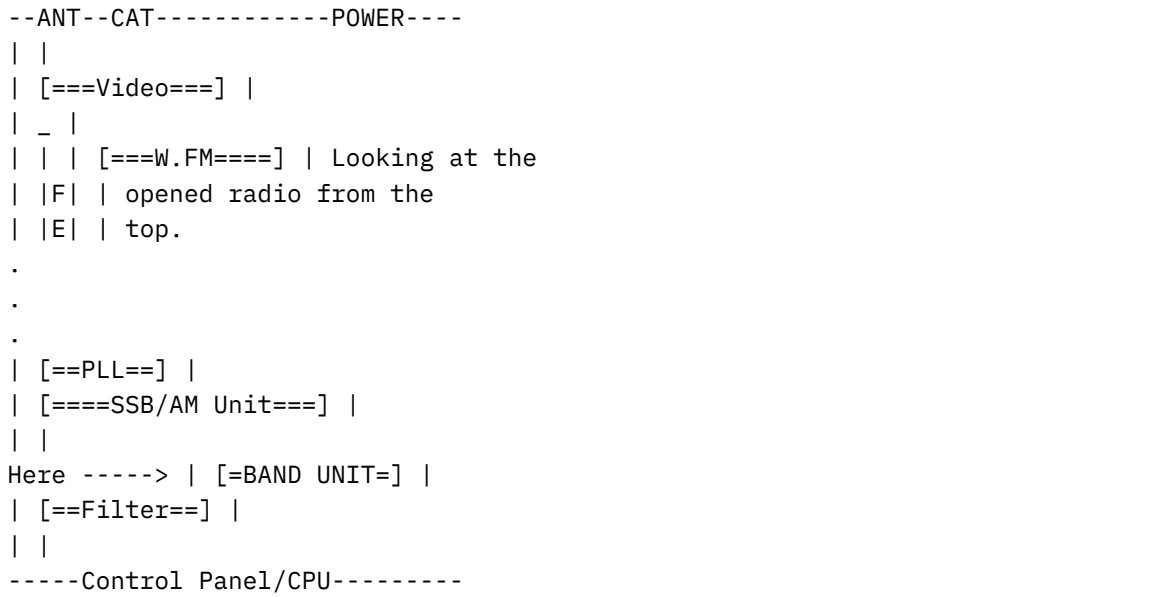
Since I bought my second hand FRG-9600, I have been fervently looking for mods for the radio. I have seen mods for so many other scanners, I could not believe there was not even one for the FRG-9600. This was quite disappointing as I liked the idea of making mods to radio. Recently I received my service manual for the radio and the result of which is this simple mod. All you FRG-9600 people out there, use your creativity. I am not sure if opening up the radio and performing the mod will void your warranty so you may want to check it out first. I can only say that this mod works perfectly for me but will not accept responsibility if you destroy your radio by your own mistakes.

Description

The original range of the FRG-9600/965 was from 60 mHz to 905 mHz. Looking at the circuit, however, revealed that YAESU had originally designed the radio to cover HF as well. Not only that, it also had coverage up to 950 mHz. I suspect that there had originally been intended a module for HF frequencies which is supposed to fit into the empty slot (J8001/J9001) next to the VHF/UHF front-end unit. For some reason, this option never materialized, maybe for commercial reasons! Anyway, it seems that some provision had been made on the Band Unit module to go ahead and make use of these bands anyway without the dedicated HF front-end. Thus, we can now enable reception from 20 mHz to 950 mHz with no gaps in between. Unfortunately, the sensitivity is not fantastic at the fringe frequencies but nevertheless signals can still be received. If you have a computer on, the RF emmission from the PC is likely to drown out most of the 30 mHz band anyways so you may want to go manual on these bands. The 905-950 band is more acceptable and works fine pulling in cellular on those channels. You will probably hear some of the RFI generated by the radio's on-borad CPU here and there also.

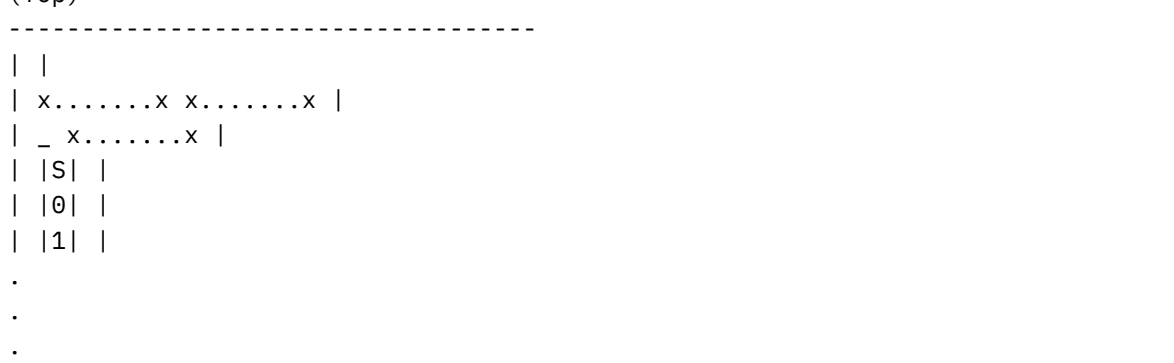
Modification

The mod itself involves soldering in 3 jumper wires onto the Band-Unit.
The Band-Unit is the closest module to you on the left. Carefully remove the cover of the radio by unscrewing the 4 screws holding down the top cover. In order to remove the cover, you need to push it back about 15 mm before lifting it so be sure not to apply undue force. Be sure to remove the power supply before beginning.



This gives you the idea of where the Band Unit module is located. The actual module names are printed on the main PCB so take a closer peek and you will see which one is which easily.

Now that you have identified the module, look carefully at it. You should
see that there are some holes near the top which are drilled but unoccupied.



The above diagram shows the component side of the Band Unit which is what you should see looking at it from the front of your radio. Note that the slot marked S01 is unoccupied. If your's has a switch on it, make sure it's open because it disables the 450-950 mHz bands if closed. If your radio does not have these bands, check this switch and also check to see if it has been hard-wired in the closed position.

The "x" indicated where the unoccupied holes are and the "........" indicates the jumpers you must make. If the jumper is already there, then you need not do anything to the radio. The jumper on the top left is to enable 905-950 mHz. The one on the top right is to enable the top right enables the 30-60 mHz range and finally the bottom right jumper enables the 20-30 mHz range. Note, I am not too sure if the mid HF transition is at 30 mHz, could be something else too. You can try for yourself, it is not critical since I put in all three jumpers for my radio. The holes are covered by solder already so you cannot easily insert your jumper wires. Ideally, use a solder-sucker or a solder-wick to remove excess solder from the holes to uncover it first. Do not apply too much heat as the surface mounted transistor nearby may melt or be destroyed. Once you have cleared the hole, slowly insert the pre-bent jumper wires into the holes starting with the one at the bottom right. Remember to clip off excess wire and do not let the wire drop into the radio and possibly short something. Use thin solder and do not apply too much. Make sure that your jumper wires are clean so that the solder will adhere to it easily.

The circuit of the Band Unit suggests that it is actually possible to enable a range even lower that 20 mHz. This is quite pointless however since the front-end is really not suitable for such low frequencies and it is unlike that you can hear anything useful even if enable. If you are interested however, contact me by e-mail. I'll give you more details.

Conclusion

Replace the cover after making sure that no bits of wire or solder are left inside the radio. Now you are ready for fun (provided you did it right). Try tuning from 19.999 (no sound) upwards and see if you get anything interesting. Usually you'll just get RFI. But when you reach about 40 mHz, you may be picking up cordless phones and walky-talkies. Once you are satisfied that works, try tuning from 905 mHz up and see if you get any cellular. Have fun while I study the circuits for more possible mods. I have received news that some FRG-9600s will not permit you to tune manually or by frequency entry, out-of-band frequencies. These frequencies can be accessed using the CAT controller program SCANNER.COM (or SCAN88.COM for XTs) with the very easy to construct interface. Meanwhile I will look into enabling tuning using the dial and keypad. This should be the next mod if its possible.

If you own one of these radios, you may want to check out my controller program and interface (easy construction) for the CAT control of the radio. The program brings FRG-9600 back into competition with the newest scanners.

I've received feedback that although the above mod allowed the radio to tune the entire range, the dial seems restricted. This restriction can be overcome by using the interface for tuning. Alternatively, you might try to reset the machine by turning off the battery for a couple of minutes to see if upon restarting, the MPU recognizes the new bands. This can be done by switching off the internal battery using the switch at the top right hand side of the front panel, under the top cover. There is a tiny slide switch there.

Have fun.

Thanks for the suggestions for the FRG-9600.

I have a problem with my 9600 in that it is "microphonic" at times. When this happens, a sharp slap on the side stops it.

Anybody have an idea what component might be causing this or has anybody had this problem??

Thanks for the info!

Bob

Hi,

Can anyone advise me as to the fair market value/pricing for new old stock Telefunken Premium Diamond White Label "md" 12AU7 tubes? These test superbly with my calibrated TV-7D/U and Hickok and are the best balanced tubes I've seen in recent memory.

I just put up four for sale and sold them for $12 each to I guess a very happy fellow. Good luck to him--he paid the asking price, no problem there.

However, I have some more of these 12AU7's made in Western Germany and would like to get fair market value. You see I'm an old full time student and buy and sell items to finance my hobbies while I'm in school so I can keep wife off my back for toy expenditures until I get a real job again :-)

Any advice on fair market prices of these premium tubes would be appreciated, because I got a very good email response, so I know I drastically underpriced them. Again, no problem with the four I sold, but I'd like to do better with the rest.

Thank you for whatever advice on pricing you care to offer.

Lance a.k.a. Bostonian

2644. New ADI HF Radio!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-25 00:00:00 UTC
From: ke6qmj@hotmail.com
Message-ID: <6d1q9ildl1@nnrp1.dejanews.com>
Source record: 152326
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.dx

Amazing News!

A friend of mine called the fine folks at ADI-Premier Communications today to ask some questions about their products. The tech on the phone told him about some of what they have coming out. He was excited to learn, and I was too, that they have a new radio about to hit the streets -- a low cost HF rig!

I was told that the radio would have all 9 HF bands, general coverage receive, and be very easy to use. The folks at ADI also said that the radio would be very simple, and would not have many of the more advanced features of other radios. The price? UNDER $500!

I can't wait to see the new radio! With the sunspots coming back, and ADI's new low cost HR radio coming out, maybe some guys like me will finally be able to afford to get on HF!

I've had my FT980 for about 10 Years now. I can honestly say I would not want to buy another rig for the HF bands (Tentec excluded of course!).

I have never had anything but good reports about the audio quality. And the CW side is something else with the narrow filters included.

I cannot recommend this rig highly enough. I love it. However, there is one problem, and that is getting any of the options that are not fitted. But, that is here in Southampton, in the UK.

Good luck if you buy it.

Good day to you.

Hello?

I have just finished a part of my home page about the Voluntary Intercepters of WWII, and I would appreciate any comments anyone has got about it.

As far as I know, there isn't anything else like it on the Web. It is unique as it tells the story of British radio amateurs during the War Years that has never really been published by any organization that I know of.

I would especially love to hear from any V.I's who were involved in these activities during WWII. Or anyone who has any information about Frank Forbes, G2BFC.

Good day to you.

>

You are right about the illegality.

462.5625 would be the mobile Tx paired with 457.0625
467.7125 would be the mobile Tx paired with 461.2125

The first pair would and still may be a used pair; the second pair may
be a mobile pair but were used for UHF links which are now no more.

You could cause untold damage if you use them, apart from the
possibility (slight) of being caught.

I would like to appologize to all the folks on rec. amateur.equipment for this--but it must be done!
Hey curtis, First---there are a lot of people who own New Digital 870's---your oppinion of 870 Kenwoods are only because you can't afford to own one! Being unemployed does limmit your choices.
Second.Why don't you find yourself a woman . You need something to occupy your time---I don't think you'll be able to find one though.I doubt that you could find a woman to accept money to mess with your ugly ass!!!!!!! I have to admit---it took allot of guts to put your ugly face on the internet so you could troll for hosebags. I bet some of the whores you've been talking dirty to on the internet are really guys. I wonder what Sid would say to that? "And now something for the ladies"----what a jerk. Do you think that by putting pictures of flowers on your web site will attract women to you? Curtis--face the facts---you are one old ugly acerbic unemployed fool! .I doubt there is a woman out in cyberland that would want your rotten old carcass.
And by the way---I've been getting 40 over signal reports from California with that piece of junk you say it is!!!!!!
Looks like your not getting any more replies to your 3950 postings on rec. radio.shortwave. Most people have been filtering you and kk7ho's postings--I'll be doing the same--they and I don't want to deal with trite inane tedious dribblings of an unemployed navy know nothing who just went into the military so he would not have to work after 20 years.Not all military people are that way--but I know you are.What was it I heard you say on 3950---something like-"I think that I should have not retired so early. I think it was a mistake." Hope Clinton cuts off your retirement money. That way you'll have to go out & get a job flipping burgers----or spend more of your time doing things that really matter instead of harrassing people on these newsgroups. Anyway curtis--I've wasted enough time responding to your posting---you have a nice day. And get a life.

The radio you are referring to is for the license free Family Radio Service
or FRS. The FRS is a USA only service.

Here's a list of the FRS frequencies.

1 - 462.5625 *
2 - 462.5875 *
3 - 462.6125 *
4 - 462.6375 *
5 - 462.6625 *
6 - 462.6875 *
7 - 462.7125 *
8 - 467.5625
9 - 467.5875
10 - 467.6125
11 - 467.6375
12 - 467.6625
13 - 467.6875
14 - 467.7125
* = Frequency shared with the General Mobile Radio Service (GMRS)

For more information check out the FCC web site.
http://www.fcc.gov/wtb/prs/famrad.html

Hope this helps,
Mike

Source record: 152339

The problem is those filters are also used for FM. Put a 6khz filter in and
you would be too narrow for NBFM. Try this: Set up your AM narrow
position to use the 2.8 khz 455 filter and the 15khz 9mhz filter. Then
adjust
your 455khz (the small knob) passband tuner to the far left or right. I
find
this to work pretty well with voice on 75 meters. Not real high fidelity
on broadcast style music, but nice and narrow for voice without distortion.

Yes, ham HF equipment will let you listen to the shortwave braodcasters.

>I have sent for a book reviewing short wave radio sets, and probably
>will end up spending around $250 for a good radio receiver.

That's about the right price although you could spend a little less if need
be.

>I guess my question is, how much $ would it cost at minimum to get set
>up to do Ham radio?

Depends on what you want to do. Good used HF rigs go for approx. $400-$600
or so. A decent antenna like a G5RV will cost about $25 and give you between
160 meters and 10 meters. To TALK on HF you'll need at the minimum a
Technician plus license or higher. To use morse code on some HF bands any ham
license would do. The higher class license you have, the more bands and
frequencies you'll have to play on. I'll recommend going to radio shack and
getting the book called "Now your talking". Attached is info to help get you
started to learning more about ham radio.

ARRL makes getting started in ham radio easy. New and prospective hams may
call 1-800-32-NEW HAM (800-326-3942).]

HOW TO GET STARTED IN AMATEUR RADIO

Getting started in Amateur Radio has never been easier! You can
usually find a ham radio class in your area sponsored by friendly
volunteers who will help you learn the "ropes."

Two Entry-Level Licenses To Choose From

The Novice Class license lets you talk by radio using voice, Morse
code or computers. You'll take a relatively easy exam on radio
operating practices, FCC rules and basic electrical theory. You'll
also pass a 5 words-per-minute Morse code test. Novice Class
operating privileges include FM voice, digital packet,
single-sideband voice and Morse code. Novice operators can use
many of the popular shortwave frequencies (below 30 Megahertz) to

communicate worldwide using Morse code, and on one shortwave
frequency band they can even use voice.

The Technician Class license NO LONGER REQUIRES A MORSE CODE
EXAMINATION, and gives you all ham radio privileges above 30
Megahertz. You'll pass a relatively easy exam on radio operating
practices, FCC rules and basic electrical theory. Technician Class
operating privileges include FM voice, digital packet, satellite,
television, single-sideband voice and several other interesting
modes. You can make international radio contacts via satellites,
using relatively simple equipment.

Where Do I Start?

The American Radio Relay League (ARRL) and others publish ham radio
license study guides to help you learn the things you'll need to
pass your exam and have fun with Amateur Radio. ARRL can also
assist you in finding ham operators in your area who'd like to help
you get started.

The ARRL Educational Activities Department (EAD) distributes a
"Prospective Ham Package" that is sent at no cost to you. The
material describes Amateur Radio, popular ARRL study guides, and
includes a list of your local ham radio clubs, ham radio classes
and volunteer examiners in your area. Contact us for a
"Prospective Ham Package", today!:

TOLL-FREE -- 1-800-32-NEW HAM (our New Prospect "Hot Line")
mail -- ARRL EAD, 225 Main St, Newington CT 06111
phone -- (203) 666-1541
fax -- (203) 665-7531
e-mail -- pbudnik@arrl.org

(Make sure to include a specific request for the "Prospective Ham
Package" and include your postal address because there is too much
material to send via e-mail or fax.)

Added Notes from KB2SMS:

Radio Shack (as well as ham radio stores of coarse!) sells the EXCELLENT
ARRL book called "Now your talking" which will teach you everything you
need to know to get your Technician class license.
Call the toll free number above to get the "Prospective ham package" however.

Visit the ARRL web site at http://www.arrl.org for more info as well.

FS/FT: Cushcraft R5 Vertical

I have a like new Cushcraft R5 vertical antenna for sale. Excellent limited space no radials antenna.

This antenna was used for just over a year, and been in storage for the last five years. Extremely clean, almost like brand new. Complete with all hardware and documentation, in the original box and packing materials.

Work 10, 12, 15, 17, and 20 meter with this highly efficient vertical radiator only 17 feet tall.

I want $200 + shipping.

Yeah, but it was cat converters that forced adoption of lead free gas.
The lead poisoned the platinum catalyst. Turns out there are other
benefits to removing the lead, however, such as much longer spark
plug life. The valve wear problem was the only real downside, and
that's a solved problem.

>When questioning the dealer who supplied our latest car (a 1.2 litre
>General Motors thing) about the poor mpg (only 32 in the city and a
>bare 40 to 42 on the motorway) and comparing this performance to our
>previous car, a Fiat of the same capacity (44 in town and 56 mpg on
>the open road) we were informed that catalytic converters degraded
>mpgs by as much as 30 percent or so...

Then GM Europe is trying to cut corners. We've had low backpressure
cat converters over here for years. Our big V8s and V10s wouldn't be
happy with restricted breathing. The MPG for our vehicles has increased
since the introduction of cats. Of course a low backpressure cat is pretty
large, probably wouldn't fit under the shoeboxes sold in Europe, but a pair
of them go nicely under a 4x4 pickup (which our government just informed
us in a backhanded way is 25 times less likely to result in a fatality for its
occupants than an econobox in a collision). There are good reasons why
we like to drive heavy iron besides the fact that it makes a wonderful
counterpoise for our HF antennas.

>Anyway, what's this to do with amateur radio? :))

Nothing. But it is a nice break from the code/no code wars.

Don't know how "protable" it is, but it certainly looks portable! :^)

In any case, according to their web site, http://www.sgcworld.com the
unit is just now being shipped, if at all yet, so don't expect any reviews
quite yet. I've been waiting to see one first hand, myself.

>Alexandra Palace, you had zip.

Oh I don't know about that. We had fully electronic television (525 line 60 Hz)
starting with round the clock broadcasts from the New York World's Fair in the
30s. And by 1948 we had a national network (NBC) running a full schedule
offering newscasts and entertainment programming. CBS joined in soon
after, and ABC came in with a full schedule 10 years later. How long did it
take before you had 3 full schedule (7AM to 1AM) competitive national networks?

>making incremental improvements over the years.

Yeah, but then you didn't have an installed base of 100 million sets
in the 1950s either. We did. When we went color, we had to stay
compatible with that base. Of course our TV has always been
private enterprise and has had to maintain a customer base. Your
government owned monopoly could care less.

>Here in Europe, we were leaders in the field of direct broadcast
>satellites with small (less than 1 metre diameter) receiving dishes.
>Meanwhile in North America, you were still playing around with clumsy
>10m diameter dishes like miniature radio telescopes in your backyards.

Actually that was 3 meter dishes. 10 meter dishes were only needed for
uplink stations. Now nearly every suburban rooftop seems to be sprouting
a 45 cm dish for DSS (500 channels). But there are still a lot of the older
3m dishes in rural America. DSS has a monthly charge. Most of the C
band programming is still free (or dirt cheap) because it is advertiser
supported. I have a 3m dish and enjoy watching a lot of the raw pre-feeds

on the back haul channels, and have been since distribution went to satellite in 1984. Have you been getting satellite TV that long?

Greenhouse gases. Oh the horror!!!

>Predictions are that current 'known' reserves will last until at least
>2025

And we've operated under a projected 25-30 year reserve every year
since 1900. In 2025 they'll probably be telling us we have enough reserves
to go until 2050, at a higher price of course. Meanwhile we have right here
in the US alone enough proven coal reserves to meet the world's energy
demands at current levels for 1,000 years. Of course we aren't using much
of that right now. Most of our generation has switched to natural gas, gotta
eat up that 25 year reserve you know so the gas companies can increase
their prices.

If anyone seriously cared about the environment, we'd stop greenhouse
gas production cold and switch to a fully nuclear powered energy system.
We have tens of thousands of years worth of proven reserves for that.
Instead of gigatons of CO2 and megatons of fly ash to dispose of every
year, we'd have a few hundred pounds of hot stuff to pile out in a desert
somewhere and put a fence around.

But that won't happen because 1 in 7 jobs revolves around fossil fuel
production, distribution, and consumption. There's too much money
and too much vested interest in keeping that system going to its last
gasp.

2674. GE Exec specs?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-25 00:00:00 UTC
From: Dan Keizer <ve4drk@mbnet.mb.ca>
Message-ID: <34F3A094.A33ED228@mbnet.mb.ca>
Source record: 152382

Greetings ...
my ham brother passed on to me a radio a few months prior that he wasn't making any use of that he picked up from a friend a while back. He doesn't know much about it, and no manual, so I'm looking for some helpful insights.

It's a GE EXEC, nameplate info is as follows:

EXEC MOBILE RT-42767
EU = RG64TAS33
ET=72-A
ER=46-A
SERIAL=5031628
DOT=101391002

If the GE Mastr II info page is pertinent to this radio, the info indicates it's a 41-80 watt radio, 20khz channel spacing, tone remote, 1 xmit freq, 1 recv freq, standard options, 42.50MHZ.
It's currently crystalled on 46.96 simplex.
The info doesn't exactly coincide with the code on this radio and I'm not sure if it's the same radio...

Two tubes in the final section are: 7984 and 8106.

Any helpful insights??

Thanks & 73, de Dan ve4drk

I think that the TS-x50 series was a replacement to the TS-x40 series
product line. Therefore the TS-450 replaced the TS-440, and the
TS-950 replaced the TS-940. In addition, Kenwood introduced a class
of rig that was in between the TS-450 and the TS-950, which was the
TS-850 at the same time.

Since the TS-850 is one class higher than the TS-450, which is one
generation newer than the TS-440, so the price different is a little
bit more substantial.

Ah, well. Germany is reunited now. I hear they have
some pretty good tanks. Tell me, what's the life
expectancy of an archduke in Sarajevo these days?

If it were up to me, all our boys would be home right now.
Too many have died in Europe this century cleaning up
your messes. Next time we should stay home and let
you settle it among yourselves.

And that goes for the Middle East too. We should sell
them all the arms they have cash to buy and let them
go at it until they all kill each other. After the glass
cools down a bit, Bechtel can go back in and reopen
the wells.

I've used both connectors and it works. I use the back connector
to connect to a remote base controller (so I can operate the
706 from my HT) and the front connector for the mic. The
easist way to do is is to buy a short CAT 5 patch cable and
cut it in half. The you have the connector already wire for
you... you just have to take a ohmmeter and make sure you
know which colors are connected to which pins. You don't
get much of a shield that way, but as nearly as I can tell,
there's no way the shield could be grounded at the radio
anyway with this type of connector.

Ah, you get that also. I recall ordering a bottle of Loewenbrau in
Atlanta 20 years ago and thinking I had received something from a bad
batch until I looked at the label and saw it was brewed here in the
states.

Caveat emptor.

> >>how very little fundamental knowledge is really NEW!

True, octane doesn't give a measure of raw power of 1 gallon of gas, but it does determine how much use a gasoline internal combustion engine can get out of it. If you try getting the same horsepower from two fuels of different octane, but gasoline all the same, you are going to fry or blow holes in your pistons, not to mention crack heads and blow cylinder gaskets, and even wrinkle rods and bend crankshafts. Detonation cannot be tolerated, so to up the power of a gasoline engine, you MUST run higher octane. Sure you have detonation sensors, but all they do is back the timing (aka power) off until a safe level of detonation is achieved. Detonation sensors therefore allow more power for a given amount of gas under certain conditions, but not that much. They are also required hardware in a turbo motor (gasoline types).

But turn production up to the level needed for enough batteries to keep the world in cars, and the small percentage margins from those mines will grow with the increased mining. Then you have processing, battery assembly, dead batteries that somehow missed the recycling center, etc.....

I'd much rather have a plutonium breeder reactor literally in my backyard (these are capable of supercritical bomb masses on meltdown, for the uninformed), than a lead anything plant 20 miles away.

If there is a good road, why not? Most luxury cars are built well here in the USA. If there quality isn't even always up to par, typically the power still is, and since Japan scared the crud out of the American manufacturers, America has even got its quality back up ....

You can buy a Yaesu FT-8500 brand new for $379.95 at most any of the Ham radio stores. You can get one from HRO at that price and they will pay the shipping. I just purchased one two weeks ago and I just love it. It displays both vhf and uhf. It will do cross band repeater. You want the one with the MH-39 mic. Go to the web page and check it out. http://www.yaesu.com/ft8500.html

I have a SB-200. All I ever did was set the meter to REL PWR and tuned for maximum power out with the tune and load control. Don't key it for more than 10 to 15 seconds at a time. I also have a muffin fan on top of the amp. I built the SB-200 myself about 15 years ago and it still has the original 572s in it.

1936, and the BBC had to use Philo Farnsworth's camera, cause theirs
didn't work. Farnsworth's whole system pretty much made Baird throw
in the towel.

The early US systems were 400some lines. The horizontal sweep derived
high voltage must have come after they went to 525, because at 12 kHz,
the flyback squeal would have driven everybody nuts.

> is currently buried in a field or slung in the sea?

You may be suprised, but there are plants on the board right now, that if implemented, can come pretty near 100% safe/100% leak free. And in America, they most likely will end up implemented. Now, getting rid of gas powered cars is going to be another thing entirely. No batteries can yet match the storage capacity per pound of a gallon of 93 octane gas. If they did, I would drive an electric car, but until I have enough power to waste power in my car, I'm not driving a boring electric one, maybe thats just an American thing, but hey, I am what I am. I also will NOT support lead acid battery powered car efforts. I'd rather breathe ash, deal with green house effects, or absorb nuclear radiation than deal with the lead that ends up leaking out from lead acid battery production once it ramps up to the levels necessary to build batteries for every car that will ever be manufactured. At least of I die from ash, green house gases, or nuclear radiation, I'll have my mental faculties until I am too debilitated for it to matter, with lead, that isn't an option.

Just my view,

David

2704. Suggestions for Dual Band FM

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-26 00:00:00 UTC
From: blackie@gate.net
Message-ID: <34f5d378.80014717@news.supernews.com>
Source record: 152153

I am looking for a Dual band 2/440 radio with cross band repat (full duplex?) capabilities. It will be used for cross band repeating on my favorite simplex frequency so I can use my HT while out in the yard and get more range (The HT is also a Dual Bander). I am looking to spend around $400. I see in the new market dual banders go for around $650. I will be looking in the used market and would like some advice on what to possibly get and what a resonalble price would be.

We have several traders nets here in the area, and that will be the first place I try.

Thanks in advance.

What we really out of gasoline are ALL the additives, that way we can go
back to the early vapour carb's patented ideas, reduce emissions to the
high 90's level and get 100-200MPG.
Fat chance.

Three Mile Island (TMI) was a testament to the safety measures
built-in to the US reactors (Soviet reactors are a different story).
The operators at TMI (unknowingly) pretty much did everything they
possibly could have WRONG! Three times the emergency reactor fill
systems were initiated by automatic control and all three times they
manually shut them off! When a steam bubble was forming in the
reactor core, they vented coolant (instead of adding more)!

Still with all this blundering, very little (estimated--might be none)
contamination was released to the outside. When the core suffered
severe fuel element failure, the containment dome sealed itself as it
should (thank God they didn't override that). The Zirconium and
Hafnium core materials (as opposed to graphite in Soviet reactors)
held up to the extreme temperatures sustained within the core and
prevented further fission.

The main problem with Nuclear Power (in the US) is that the technology
is still classified (By the Atomic Energy Act of 1957) and because of
this, the general public has no idea how safe it really is. Only
Three Americans have every been killed related to Nuclear Power. The
conventional plants can't make a claim like that.

I've heard about these hydrogen fuel cells, but I somehow don't like the
idea of a mobile hindenburg while keying up my current amplifier!
I also run an oil burner, infinately superior to petrol.
However if you really want to know where we're going in the future check
out my main man's site: www.friend.ly.net/GEET

Greetings,

I have for sale a Yaesu FRG-100 general coverage table-model shortwave receiver. Radio covers 50 KHz - 30 MHz in AM, USB, LSB, CW. Will also receive HF FM signals with optional FM board (not included).

Radio was purchased new by me approx 2 years ago. It is in excellent condition with no scratches or blemishes. It has seen minimal usage. Radio can be computer controlled with Yaesu CAT interface (not included in this sale).

Comes with original box, manual, 12 VDC power supply, and schematics.

Asking $475.00 plus COD shipping, cash or money order. If interested, please respond to my E-mail address only. Thanks for reading.

Some people here make some excellent home-made beer.
Most of it better than the tasteless sap you buy in
the pubs.

>Thought you Jocks drank "heavy" (5 /- or whatever it was)

This 'Jock' is exiled in a country where they don't have
light and heavy. I drink continental lager* as I can't
stomach the English chemical lager or their warm bitter,
which has a lot in common with dishwater (or ink).

>(This is on-topic in rec.radio.amateur.homebrew, isn't it??)

!!!!

* Continental lagers brewed there, not those churned out
by Courage masquerading as Stella or Kronenburg!

Well Walt, that must be your fault. It's generally a bigoted comment from
yourself about G-Nothings, G7s, repeater users, ex-CBers, the "guess-tick"
RAE et al that sparks things off.

If the farts on 80m are that old, why is it "80 metres" not 260ft?

Nick
(a G7, ex-CBer but NOT a repeater user)

Might be where you have high prices anyway - diesel locally has always
been 3 - 4p /ltr cheaper! Hence the purchase of a landrover discovery!

Current price is 59.9p/ltr against 63.9p and 64.9p ltr in two local
emporiums.

Both the HRO and the AES catalogs have short blurbs on the new Yaesu.
If I did not already own (and love) an ICOM 706 Mark II, and if I did
not want to take my sole HF radio mobile, I would be ordering the
Yaesu. Alas, the new Yaesu (drool!) is in a base station form factor.
It is not a cute little AM/FM car stereo sized unit like the ICOM 706
Mark II. OTOH, I believe the new Yaesu has both DSP and an automatic
antenna tuner built in (but I could be wrong on either of those, so
please check the manufacturer's literature).

If the radio is within spec (freq wise) across the band, the vco voltage
is probably correct. Now one thing you can check., is the amplititude of
the vco decreasing as you go across the band. If this is true you will
have a lower signal into the mixer,,,,,lower power out. One last thing
when you you notice a decrease in power do you notice an increase of
current draw??? This could indicate an impedance mismatch. If its
lower,...look at the vco.

Kenwood TS-440SAT 10-160 meter HF rig with built in tuner.
Icom 271H 100WATT 2meter allmode base station.

I would like to trade one of these in on an Icom 706MKII .

The Icom 271H has the tone board installed, the voice module installed , and
I also have the computer interface for the 271H that goes with it ....
I am asking $ 750.00 for it and it is a 9.9+ in apparence and works great....
I have the mike, with the tones on it and the book but no box....
thanks for reading my posting...

Subject: ## HELP ## Need info on re-charging a battery
Can some one help me?
I have found 2 rechargable batteries that are in perfect condition but
I have no idea how to charge them. They are 12v 7amp (lead acid I
think). What kind of power, amprage, do I use to try and recharge
these?
Thanks for your help.

The earlier model 706 have an inherent defect in the 2 meter module. If
you go to the Icom webpage and go to the tech help section, there is a
fix that involves replacing several components. One of the additional
benefits is that your RX will improve 100%.

Subject: Commercial repeater question.
There is a commercial repeater around here that operates around 166 mhz
(output). I know that they use CTCSS to activate it but I can't seem to
find
the input frequency. Is there a standard offset used in the commercial
world
or could it be anything? I am simply curious about that because on 2
meters,
the offset is fixed to 600 khz and I wonder about commercial stuff. Thanks
for any input.

Both in the US and Canada VHF repeaters can be any input frequency. I'm
not sure about Canada, down here we have various frequency guides
available that can be found at Radio Shacks, stores and mail order that
show various frequencies assigned to specific organizations/companies, and
you might be able to tell from that. It would show a large number of
mobile units on the repeater input frequency...
Good luck!

I called ADI to confirm the story and the Tech said they are working
on some sort of 6 meter radio, Dual band radio etc. He had no knowledge
of a HF radio but said the idea has been kicked around. Perhaps he isn't
in the know about it. But the original poster said it is just about to
be released. I hope I am wrong though and a $500 bare bones HF radio is
about to be released for us.

From: baker@sgi.net (Tim Baker)
Subject: Question: Best radio for AM/FM/WB reception?
Hi All,
This question may be off topic, but its the closest forum I could find
to ask it in. I live in Western PA and would like to buy a radio that
provides the best reception for AM/FM/WB. I want this radio for in my
office where it must co-exist with computer equipment. I have a few
other desireable feature, but none are requirements. I would like it
to have a digital tuner with presets, external antenna inputs, and a
digital clock. Sound quality is a concern, but not a major one.
Primary need is for sports broadcasts, AM talk radio/news, and weather
band.
I would also like to hear opinions on where the best places to buy
this radio. Retail stores, mailorder, other?
Thanks in advance,
Tim Baker

Subject: Suggestions for Dual Band FM
I am looking for a Dual band 2/440 radio with cross band repat (full
duplex?) capabilities. It will be used for cross band repeating on my
favorite simplex frequency so I can use my HT while out in the yard
and get more range (The HT is also a Dual Bander). I am looking to
spend around $400. I see in the new market dual banders go for around
$650. I will be looking in the used market and would like some advice
on what to possibly get and what a resonalble price would be.
We have several traders nets here in the area, and that will be the
first place I try.
Thanks in advance.

Boy you can get all kinds of opinions on this NG. I'll just stick to the facts. About thirty of you have done business with CT in the last two months and no complaints yet. For those of you who request a quote and then don't buy, how about a reply as to why. I usually guess it's price, even though I believe I am always under AE et al. I am flexible, you need to negotiate.

And the the place to practice one's haggling skills is face to face at a hamfest. Charlotte NC, March 6,7, Sat and Sun at the Merchandise Mart, you can bargain with me, (the nice one) or Doug, (the Evil Warrant) in person. See you there, bring your list.

[This answer is being posted to rec.radio.amateur.equipment and emailed
to Doug.]

Dear Doug,

I assume that you ment Ham Radio. :-)

Side Band or better known as Single Side Band (SSB) is one of several
forms a sending out a signal. I can't draw in ASCII very well, but if
you don't mind my "bad" drawings, I think you'll find it easier to
understand.

Lets say I draw an image of an AM voice radio signal. To the left
are the lower frequencies and to the right are the higher frequencies.
The vertical direction is the signal strenth.

```
...|...
.. | ..
. | .
. | .
------------------------|--------------------------
```

The vertical line is the carrier frequency. Think of it like
the center or average of all the frequencys in our signal.

The information contained in the lower frequencies (to the left
of the line) is exactly the same as the information in the
upper frequencirs (to the right of the line.

This is a DOUBLE SIDE BAND signal because both the upper and
lower frequency information is present in the signal.

What if we took some filters and cut out part of the mirror
image of the signal? It doesn't matter which side is removed,
but for the sake of this example, assume that the right side
or Upper Frequencies are removed. This is what we would have:

```
...|
.. .|
. .|
```

```
. .|
-----------------------|-------------------------
```

Also assume we filter out or remove the carrier (center) frequency.
This is what it would look like:

```
...
.. .
. .
. .
-----------------------|-------------------------
```

So there's a drawing of a Lower Side Band signal; so what!
Well, ther are some neat things here:

(1) The signal doesn't take up as much radio frequency space.
Thus we can fit about twice as many stations in a given
frequency band. That's important.

(2) We're not waisting radio energy in a mirror image of the
signal. Nor are we waisting radio energy in sending
a carrier signal. (The carrier can be inserted at the
receiver. Now that we're not burning up power in an unneeded
Upper Side Band and a Carrier, we can put all the lost power
into the Lower Side Band. This is like increasing the power
lever by a factor of 4 times.

This is just a quick and simple explanation. I hope other Hams
will post some WEB links that explain this with more detail and
better drawings. <smile>

Best Wishes,

Bob KF6JHG

Awww, come on, Butch. You're mean. :) You should probably explain that
a Kenwood SP-430 is a speaker. What the original poster was probably
asking about was a TS-430 HF transceiver.

I've never used any ADI equipment, are their radios any good?

I guess the real question is, Can an HF Radio for under $500 be any good?
(I know we'll have to wait and see; assuming that the rurmor is true.)

Er, one small point. In Scotland (and no doubt many other parts of the
UK) there are villages where there were lead mines until the very recent
past.

The locals don't seem peculiar in any way; and the many tourist visitors
to the insides of the mines would appear to be there voluntarily.

Why in the name of all things Usenet are we *still* using this topic for a thread about 100 messages long that hasn't talked about Internet messaging for the last 97 or so, and has varied from TCP/IP vs. AX.25 on packet to 56k TNC's to American beer vs European beer to petrol, gasoline, hydrogen, biscuits and cookies, outlawing diesel fuel, and nuclear power plants exploding?
Time for a new topic thread I think...

Aww, go ahead and flame me, why the hell not! This is entertaining at any rate!

In the case of the one I own, it's very reliable and starts first time after being locked away for many months (as I hope to prove again in early April) because it is a relatively simple engine compared with most modern petrol cars. Also mine is particularly safe and comfortable, and is neither noisy nor underpowered. I guess that Gary gave up on diesels without trying one with a turbo engine.

>worldwide?

I justify the big engines because we drive big vehicles, and they need
that power to give them decent performance. As to the bushwa about
fossil fuel consumption and CO2 production, I'm simply not as alarmed
by it as you seem to be. Take a *hard* look at the science behind some
of this. It is shockingly shoddy and agenda driven.

>>a pair
>>of them go nicely under a 4x4 pickup (which our government just informed
>>us in a backhanded way is 25 times less likely to result in a fatality for its
>>occupants than an econobox in a collision).
>
>And maybe 50 times more likely to kill the guy you run into?

If he's driving some little crackerbox on wheels, probably. That's
his decision and his tough luck isn't it? Physics won't be denied.
It is not the fall that kills you, it is the sudden stop at the end. The
same goes in a collision. Big iron doesn't stop as fast in an impact,
even a rigid barrier impact, so the decceleration forces on the
passengers are much less than they are for a light vehicle. (A
very surprisingly *large* difference, do the math.)

The larger crush space and sturdier construction also limit
intrusion into the passenger compartment by external objects
intent on doing you bodily harm. If you choose to save a few
pennies in fuel consumption in preference to crash worthiness
and occupant safety, well I suppose that's your choice to make.
But there is a price to be paid for that choice, and that price is
yours to pay in blood.

>>There are good reasons why
>>we like to drive heavy iron besides the fact that it makes a wonderful
>>counterpoise for our HF antennas.

>
>For example, the penile extension syndrome?

There is certainly an element of macho in driving a 4x4
that never leaves pavement. But in fact mine does leave
the pavement frequently enough to justify it, or has to
operate on pavement slick enough to justify it. And it is
large enough to carry the loads I occasionally need to
haul, as well as big and sturdy enough to offer me a
degree of protection in traffic mishaps. Those are all
things which have to be balanced against operational
costs like fuel consumption.

I've owned the little crackerboxes. I've raced everything
from MX motorcycles to Top Fuel dragsters. I think I
understand the tradeoffs involved between agility and
survivability. And for my day to day driving, I've chosen
the big iron as best making the tradeoffs I'm willing to
accept at this point in my life. The hard fact is that you
can't avoid all collisions, no matter how good you are
or how agile your vehicle. Crashes happen. And when
they do, the vehicle you chose can determine whether
you walk away with a few bruises, or whether they have
to pry you out of the tin can and spread you in the
coffin with a pastry knife.

Hello all,

I have just purchased a Radio Shack DX-398 radio. I would
like to use it to capture AM baseball games this upcoming
season and need to increase it's AM reception. Any ideas?

The CRANE Co. SELECT-A-TENNA seems to be the best I can find
so far, but as far as spending $58...I'm not so sure
I want to do that right after buying the DX-398!

Any help deeply appreciated.

Dear Prospective Customers,

We are a newly formed company dealing with radio communications equipment for both commercial and amateur based in Kuala Lumpur, Malaysia. We are offering these equipments for sale at a very special discounted price due stock clearance. We are able to sell at a very competitive price due to purchasing them in large lots from Japan and due to cost of the products quoted in the local currency before.

All products are brand new and fully guaranteed. Eg. HF transceiver from ICOM (IC-706 MkII) is being offered at US$1120.00 (excluding freight) against the current price of US$1289.00 offered by other radio dealers in the US. Please allow 1 week delivery after clearance of checks. We accept checks in US funds only.

For quotes of all other products available and further queries, please e-mail to hamsupplies@trust-me.com or phone ++ 603 9439284
fax: ++ 603 2513775 attn: Farez . We will promptly entertain any of your queries.

Sincerely,

Megat Farez (Managing Director)

>3. Technology increases allow exploitation of lower grade ores etc

And also allows access to rich sources in more difficult to access
locations. This has major implications for oil and gas. We've mostly
only done shallow drilling so far. And we haven't drilled at all in nearly
two thirds of the world.

>4. Third world countries now cashing in physical resources

>mine, or the environmentalists get you!

Those figures don't include our brown coals or our western shales.
When those are included, the US alone has a 1,000 year supply.

>>If anyone seriously cared about the environment, we'd stop greenhouse

>90 in the meat, caused by Chernobyl fallout.

TMI proved that our plant designs are safe, even in the face of the
operators doing exactly all the wrong things for 48 hours. The Detroit
Edison Fermi plant meltdown was even better proof. That was a total
core melt, not just some core cladding damage. Not one person
was injured. What Chernobyl proved is that you don't build a reactor
with a positive void coefficient and then call a tin roof a containment
structure.

Low grade waste can be dealt with by concentrating it into high grade
waste. The entire amount of spent fuel used by the world's nuclear
programs to date could be held on a football field stacked to a depth
of 4 feet (though that wouldn't be a great idea to actually do). If you
throw in all the waste from other sources from day one (except weapons
programs), including dismantled decommissioned reactor plants, it
would still make a pile smaller than the ash pile generated by *one*
1000 MWE coal fired plant in a year. The volume of waste is simply
not huge. Virtually all of it could simply be piled in a desert and have
a fence placed around it without any serious consequence. The
greatest bulk of the high level waste is short lived radioisotopes.
In 100 years, its activity is down to the level of the ore originally
dug out of the ground. It is not necessary to isolate it from the
environment for all time.

>>But that won't happen because 1 in 7 jobs revolves around fossil fuel

>
>Your latest government is pretty much of the same.

Right. The US isn't going to agree to anything which makes us
non-competitive for no good reason. We have a high energy society,
and that is our advantage. We aren't going to give it up without
overwhelming proof that not doing so would be devastating. So far,
the proof isn't even self-consistent or mildly compelling. Much of
it is downright dubious speculation.

>Instead of looking at nuclear/fossil fuels - we need to be looking at
>renewables, wind/wave/tidal/solar/biomass. They all have their own

>CO2/NO2/SO2 emissions. No power source can at the moment be perfect but
>we can improve matters, it just needs co-operation and governmental
>agreements, something which does not seem to happen from your side of
>the pond

Renewables do have serious problems. The most serious being that
most of them are very diffuse. In the US, we have tapped virtually all
the hydro we're ever going to be able to tap. And much of that will be
lost in coming years as the reservoirs silt up. Hydro is best used as
peaking power anyway, and not as base load generation. It is rapidly
and arbitrarily scheduleable on demand.

Tidal power is very site specific as to where it can be economically
exploited, and we have few such sites. It is also intermittant. So it is
not suited to meeting our on demand peaking needs. If we allow it
to take up some of the base load, we have to throttle back our other
base load sources to accomodate it at the times it is available, and
that generally means that they will be operating very inefficiently.
Base load generation should generally be run flat out at its most
efficient output all the time.

Wave power is too diffuse to be economic, and too vulnerable to
weather. It is also too far from most of our continential demand.
We have some promising wind sites, but not that many. The bulk
of our wind energy resource is diffuse and irregular. It isn't suited
to meet base load, nor is it scheduleable to meet peaking demand.

A large grid can allevate the problems of wind being a diffuse and
irregular source by averaging the resource over a large area. But
such a grid is very unstable and very difficult to manage and
control. As long as wind provides only a tiny fraction of the grid's
production, it can be managed. But if it starts to become a significant
supply source, the grid becomes very unstable and subject to
wild surges. That's particularly true when major storm fronts
pass through our prime wind farm areas, as they do regularly.

Solar suffers from LOLI (nuke speak for Loss of Light Incidents).
When we need power the most, at night, solar fails us. It is also
a diffuse resource, requiring vast stretches of land to provide
serious amounts of power. But it is perhaps the best of the
available renewable energy sources. All the other renewables
ultimately are secondary solar energy. (Actually, renewable is
a misnomer, the nuclear fusion supplying the energy isn't
renewable, but it is for practical purposes virtually inexhaustable.)

Right now, gathering solar for grid power simply isn't economic,
but that may change with improving technology. Storage will be a
necessity, however, due to LOLI. Pumped storage is perhaps the
best we have available for this, but it is very environmentally
unfriendly.

Biomass is ultimately no different than fossil. It releases CO2,
and a host of other pollutants, which are not immediately
recycled or neutralized. And in some cases biomass doesn't
even represent a net energy gain. For example our gasohol
program, which fermented and distilled corn to make fuel
alcohols to be blended with gasoline, wound up being a
net fossil fuel consumer due to the use of petrochemical
fertilizers and fuels needed to grow, harvest, and process
the corn to alcohol.

I note that you haven't touched on one of the more promising
alternative energy sources. That's dry geothermal. The resource
is huge, and we have the drilling technology to tap it. It is non-renewable
in the sense that the nuclear fission which powers it is not breeding
more fuel, but again, like solar fusion, the fission resource is extremely
large and for practical purposes inexhaustable. Dry geothermal is a
promising source of base load generation.

But we will still need large central generation plants that are fully
scheduleable and able to meet base load demands. The best
technology we have for that is the nuclear fission generating
plant. It is the cleanest and lowest cost source of electrical
power we know how to produce. (Actual costs, not politically
imposed hysteria costs.)

Sounds like you popped the TR PIN diode Masa. Bet you transmitted
on HF with the antenna too close to the 2m antenna. That usually
does it.

I am looking for info on the pinouts for the 12 volt
connector. Could someone tell me what pin is for what?

Also I believe there should be a jumper plugged in
this socket when using on AC. Could someone tell me
how to make this jumper?

Please post here instead of email.

Looking for this particular radio or one that can do the same as this. We are trying to put up a
222 repeater and this radio, from what I here, can be moded to go up there.

If you have an extra one, and want to sell it, or know where to obtain one, please e-mail. Our club is trying to add this band to it's ranks. Thanks.

Can't we go a week without someone making an argument about letting NO-CODERS get on HF. For all the HAMs who learned code like myself CONGRATULATIONS. For all the rest of people who haven't learned the CODE yet.. just a few minutes out of your complaining about the code each day and learn it. You just might see how learning a new language could be fun and exciting!

This message wasn't to bash anyone... just a thought from one ham to another.

Hi,
Yes! This is a problem that Kenwood knows about. I called the dealer
that I bought the radio from (Denver Radio) and they told me to send it to
them and they would make the factory authorized modification and put a new
battery in the radio. Everything is fine now. Give your dealer a call.

From: Michel Morin <morinm@csgoeland.qc.ca>
Message-ID: <mOdJ.1$wu2.107949@carnaval.risq.qc.ca>
Source record: 152222

There is a commercial repeater around here that operates around 166 mhz (output). I know that they use CTCSS to activate it but I can't seem to find the input frequency. Is there a standard offset used in the commercial world or could it be anything? I am simply curious about that because on 2 meters, the offset is fixed to 600 khz and I wonder about commercial stuff. Thanks for any input.

I called ADI to confirm the story and the Tech said they are working
on some sort of 6 meter radio, Dual band radio etc. He had no knowledge
of a HF radio but said the idea has been kicked around. Perhaps he isn't
in the know about it. But the original poster said it is just about to
be released. I hope I am wrong though and a $500 bare bones HF radio is
about to be released for us.
Sam

Both in the US and Canada VHF repeaters can be any input frequency. I'm
not sure about Canada, down here we have various frequency guides
available that can be found at Radio Shacks, stores and mail order that
show various frequencies assigned to specific organizations/companies, and
you might be able to tell from that. It would show a large number of
mobile units on the repeater input frequency...
Good luck!

The earlier model 706 have an inherent defect in the 2 meter module. If
you go to the Icom webpage and go to the tech help section, there is a
fix that involves replacing several components. One of the additional
benefits is that your RX will improve 100%.

Anyone know the difference between the TS950 s Digital and the TS950SD? I have the TS950S Digital which I purchased about a month ago and was told it was the 950SD. It does have the digital unit under the rig. Anyone also know the difference in price between the two. And the difference in electronics. I am very happy with the unit but just not sure how much I overpaid.

Thanks
John

>max..For telephany, keep the plate below 250ma.

Maybe OK, but the pair of 572B's in other amps do indeed call for
a dipping of the plate (as in SB-200 and others like the Yaesu).
You need to dip the plate at low LOADing before you bring it up and
tune for maximum output.

Anyway, good luck, it is a good amp.

2789. Question: Best radio for AM/FM/WB reception?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-26 00:00:00 UTC
From: baker@sgi.net
Message-ID: <350ab0e3.844255835@news.sgi.net>
Source record: 152238

Hi All,

This question may be off topic, but its the closest forum I could find to ask it in. I live in Western PA and would like to buy a radio that provides the best reception for AM/FM/WB. I want this radio for in my office where it must co-exist with computer equipment. I have a few other desireable feature, but none are requirements. I would like it to have a digital tuner with presets, external antenna inputs, and a digital clock. Sound quality is a concern, but not a major one. Primary need is for sports broadcasts, AM talk radio/news, and weather band.

I would also like to hear opinions on where the best places to buy this radio. Retail stores, mailorder, other?

Thanks in advance,

Tim Baker

I Have For Sale A Icom 251A 2-Meter All Mode Radio With Vox & With IC-HM7 Amplified Microphone.
This Radio Operates Perfect, Just Recently Used It In My First ARRL VHF Contest.
The Radio Is Very Clean & Comes With The Box, Manuals, & Schematics.
Only Problem Is That The S-Meter Is Stuck In The Middle & Was Like That When I Bought The Radio Last Year. This Radio Has A Very Sensative Receiver & Is Very Impressive On The Air. I Am Selling Because I Purchased A New Kenwood This Last Weekend. I Would Rate This Radio 8.5-9
The Price Is 375.00 PrePaid Plus Shipping.

The voluntary band plan for 30m puts rtty between 10.130-10.140, and packet between 10.140-10.150 MHz. So you were in the packet area. Cw is by agreement 10.100-10.130MHz.

What? Have you ever been to Leadhills?

Many hundreds of miners and their families died from lead poisoning and the lead fumes from the smelters polluted the areas for miles around the plant. In fact some of the smelters still exist because the lead has leached its way into the wooden building in such quantities that it will not rot. The local watercourse is heavily contaminated by lead sulphide and in most places around the site; lifeless.

The expose now is probably minute, the ore is not mined now (although there are tonnes of ore left - supply/demand price too low for mining it) and so the Galena is not being spread about. The smelters are no longer running and so lead fumes are not being produced, so of course the locals look OK. But their ancestors were far from OK.Most died very premature and quite nasty deaths, brought on by lead poisoning.

>(I know we'll have to wait and see; assuming that the rurmor is true.)
>

Beauty is in the eyes of the beholder. There are many factors people
would like to compare before making a conclusive answer. Some people
will look at:

Brand Name (Reputation? Loyalists?)
Service Department (turn around time, cost, etc.)
Construction of the radio (size, and etc)
Receiver Capabality (adhere to the spec. or not)
Transmitter Capabality (dido)
Additional features (knobs, filters, and other options)
Appearance
Overall cost (Expensive options? Very important to many people.)

All of the above?

If budget is a major concern, then a more cautious decision making
process might be needed. Otherwise, look for some higher class rigs;
unless it's going to be a back up or a mobile rig.

Thanks to all who've responded so far - there were some good ideas.

It has been suggested by a local ham that I could make a cheap version of the "Cantenna" by using 200 - 10K ohm 1/2w resistors in parallel, mounted between two 4x6 inch plates of copper-clad pc board (with the copper to the outside). This assembly is then connected to an SO-239 mounted in a paint can lid and suspended in a paint can full of mineral oil.

He says the copper clad pc boards pretty much cancel out the reactance that would be present and make for a very good 50+j0 ohm match.

He said to use 1/2 watt, 5% resistors - I didn't ask, but I assume he meant carbon film, as thats about all I can find in 1/2w, 5%. Does that sound right?

If this will work, I'll be ordering the resistors and sharpening my drill bit...

Any comments? Am I wasting my time here? Is mineral oil non-conductive?

Thanks & 73,

-Marty KI0LO

I was thinking about buying this rig as a second rig for camping. Someone told me the automatic tuner wasn't that good. If the antenna had a swr of 3 or more it wouldn't tune.
Can anyone confirm this???
I use a 75 meter dipole, then the tuner for 40,20,10.. It works great with my TS450 but would like to know someone that has the 570 opinon on the radio.

Marty OM,

Sounds good to me; I predict it will work fine, at least for HF,
for 100 watts. You can use either carbon film or metal film
resistors. Mineral oil is indeed non-conductive. You can even
use drinkable mineral oil, which is quite pure.

73 and GL,
Don, W6JL

>I am looking for a Dual band 2/440 radio with cross band repat (full
>duplex?) capabilities.

Do some serious research. Kenwood and Icom have dual banders which will allow remote control from your HT using DTMF. The yeasu FT-8100 allows one way and two way cross band but no remote control (The Kenwood and Icom can do one way cross band by playing with tone squelch which means buying a CTCSS module. This is the same module which facilitates remote control). The remote control feature is useful for switching output channels (I am not sure if Input channels can be changed since this raises the probability of mischief, error, and loss of control over the radio).

I have the FT-8000. The only thing lacking is remote DTMF control in cross band repeat mode. I also have the Alinco DR-605T without the module. Because it has two way repeat (no one way), the duty cycle is high and the radio heats up quickly. This is a problem with two way rpt.

Best thing is to search for the company web pages and read up on which radios do what. Also search for retailers and check online prices. I would tell you to buy a magazine and check prices but they are hardly ever printed in advertisements.

Hope I was of help.

Richard, KF4PFE

Well, I just purchased a ADI AR-146 two mtr mobile and am very impressed
I think it is a Kenwood TH-241a that was CLONED but has all the options
that Kenwood charged for as STANDARD. I opened up the radio and am
impressed with the quality of construction. I got NO INTERMOD like I got
with the ICOM 2000H that boasts it is Intermod resistent. BTW, I paid
$199 at HRO. SUCH A DEAL.

I would like to purchase a $500 mobile type radio like the Kenwood TS-50
or the Alinco DX-70T. I realize some features (that are seldom used)
will have to be eliminated but I would be game for a radio like that.
Any other comments????

73's Steve NS1R

If someone has the mods for the Icom T22a, I would appreciate
either a copy or e-mail. I would be happy to reimburse for postage
or copying costs. E-mail is fine, too.

Thank you
Bob

Surplus Standard 19 inch equipment enclosures. These
enclosures have never been used !!!!!! Mounting space:
19" width x 70" height x 24" depth. Good for many types
of rack/shelf mounting applications such as; test equipment,
cellular and paging equipment, data com/server equipment,
and other applications. These are very well built Enclosures
(cabinets) with several features, $329 compare our prices. Go to
http://www.flash.net/~lhix for more information.

A little food for thought:

At the Orlando Hamfest, I got to see one of these fancy new rigs...

Its small, not 706 size but small, not a rag-chew rig - I was told...
Even with thermal fans, still can over heat an "shut-down" for a while.
The little bit of Rx I heard sounded pretty good...

But the bad news is: Late March - 98 last production of 736 R's...
This was from Yaesu person at show... Company will still support for awhile.
Its a shame...

Also saw new Icom 746, bigger than Yaesu, display is really different,
not as nice as in Promo pictures.... Don't think this one is going to
be big seller???

Just a little input from the people who build an sell these rigs....

>your average family car!

I have. Dozens of times. In everything from a 1956 Chev sedan, AMC Hornet
wagon, Toyota Wagon and Suzuki 4WD. As I said, what's hard about it?

>>Many years ago, diesel fuel here was substantially cheaper than gasoline.
>>At one time, back in the 70's, using diesel was considerably cheaper than
>>gasoline. Not any more, though, so why bother with the extra cost of
>>buying and servicing diesels?
>>
>>73, Bob, VE7HS

>Why not? If the fuel is cheaper and the engines available.

Because the fuel ISN'T cheaper, and the engines are more expensive to buy
and service. Opting for diesel simply isn't cost effective. Here, anyway.

73, Bob.

Hello, and thanks for reading this post. I have for sale the following
equipment, all in "like new" condition, and all with original boxes and
manuals.

1. Yaesu FT11-R-HP
both nicads (FNB-31 and 38) with chargers
FBA-14 alkaline battery case
PA10A DC adapter/charger (cigarette lighter)
(2) leather cases (to fit both battery sizes)
Expanded receive per keypad mod
Expanded x-mit (136-180mhz) per hardware mod
ADMS-1 PC programming software, with cable
Price: $225.00 firm, including U.S. shipping

2. Uniden Sportcat SC150 12 Band scanner, 100 chanels + WX
Leather case
Receives full 800 mhz
Price: $125.00 including U.S. shipping

3. Sony Pyxis 760 Moving Map GPS
Jeppesen aircraft database
Sony continental overview database
32k memory card
2 Florida C-map marine cards
Sony custom mounting kit
Extra carry case.
Price: $195.00 including U.S. shipping

Replies can be by phone: (219) 856-2921
or Email: kerlin@ligtel.com

>instructions for installation. wonder if anyone who has made the
>switch can tell me what's involved...is there a loss of memory?

No loss of memory contents - but back it up onto your computer first
anyway if you have the software.

To get at the power switch:

Remove the battery.

Carefully remove the black NiCd label from the back of the radio
chassis. This label is part of the radio's water-resistant shell,
believe it or not, so don't damage the adhesive on it.

Under the label are two screws. Back the screws out several turns,
but not all the way. Then gently press on the screws. This will
push the keypad out the front of the radio. Carefully hold the keypad
and its gasket, then remove the screws the rest of the way and remove
the keypad.

Remove the antenna and knobs from the top of the radio. At this point,
there are no more screws holding the radio chassis inside its plastic
case, but there are a couple of little metal tabs on the chassis that
engage cutouts in the plastic case. These tabs are at about the level
of the (now removed) black NiCd label. Spread the sides of the plastic
case slightly to help these tabs pop out, while using another finger
inserted through the keypad hole to push the lower part of the metal
chassis readwards. The lower part of the chassis should push back
out of the plastic outer case fairly easily.

Once the chassis has been pushed out at the bottom, you can slide it
downwards so the knob shafts and SMA connector clears the plastic case.
Also make sure that the PTT/mon/light rubber buttons don't get caught
on the exiting chassis.

At this point, the radio is apart. The power button is probably still
sitting in the front of the plastic housing. Just replace it with the
shorter one.

Now you need to put things back together. To make it easier, the
rubber "light pipe" that carries light from the red/green LED up to
the top of the case can be removed. Then put everything back together
in reverse order of taking it apart, making sure that none of the sealing
gaskets gets pinched somewhere it isn't supposed to be, and all of the

gasket sealing surfaces are clean.

Once everything else is back together, the rubber light pipe can be pushed into place from outside the case. This is easier than trying to align it with the right hole in the chassis while re-installing it.

When it's all back together (remember the NiCd sticker!) it should work exactly as before - with the exception that the power button is now about 1 mm shorter.

Dave

Ivor,
Without doubt, the American who replied is confusing Beer with Lager!
Lager needs to be drunk cold, but as for Beer, esp. Real Ale as you stated,
it's optimum temp is nowhere near that of Lager.
A nice pint of Dogbolter would go down fine right now!

Alan

2840. FS: Two #45 RCA Used Tubes

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-27 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6d6kl2$a05$3@csu-b.csuohio.edu>
Source record: 152087

Two RCA #45 used tubes for sale with my actual TV-7D/U's readings/ratings for each tube.

Tube dealers due to large volumes of tubes generally cannot spend the time to give you the actual "performance" of the tube on a calibrated TV-7D/U tester in excellent shape (Please understand your readings can vary obviously). They simply say the tube passes usually and you could get a mediocre pass at best to decent very strong tube with the luck of the draw that's really like a new tube. I have had this experience.

Have rated and priced the following two tubes accordingly:

Tube 1: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 78

Asking price $50.00 or B/O plus shipping. This tests approximately like a new tube in my opinion!!!

Tube 2: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 65

Asking price $40.00 or B/O plus shipping. This is a strong used tube in my opinion.

International buyer welcome.

Thank you.

I Have For Sale A Icom 251A 2-Meter All Mode Radio With Vox & With IC-HM7 Amplified Microphone.
This Radio Operates Perfect, Just Recently Used It In My First ARRL VHF Contest.
The Radio Is Very Clean & Comes With The Box, Manuals, & Schematics.
Only Problem Is That The S-Meter Is Stuck In The Middle & Was Like That When I Bought The Radio Last Year. This Radio Has A Very Sensative Receiver & Is Very Impressive On The Air. I Am Selling Because I Purchased A New Kenwood This Last Weekend. I Would Rate This Radio 8.5-9
The Price Is 375.00 PrePaid Plus Shipping.

I have a Ten Tec Scout for sale that is only 5 months old. It has
several
options; including the Noise Blanker essential if you live in home near
a
busy street, Band modules for 20,30, and 40M bands, Mobile bracket, Hand

mic and all the orginal boxes and manuals. I used this rig as a backup
for
my station and currently it is gathering dust so I will sell it very
reasonably to you if interested. By the way I operate primarily CW and
yes
this is a very good CW rig a lot of fun as a backup or primary rig. Just

make me an offer. I paid $694 for the entire package so if your
interested
just send me your offer if its reasonable then it will be a done deal.
If
you feel more comfortable talking about it on the phone call me,
502-493-9088.

You forgot to tell them that it is a 40 db radio .. Did you tighten up that loose

screw behind the mic yet ? You seem to be anxious to sell it, do you have a
mortgage payment coming due ? If you get into a bind I could loan you the money
and take the radio as collateral. See what a good guy I am, I'm not as bad as
you say I am on 3950. By the way, have you visited my web site and read
the 3950 Liberty Net Opinion Lately?

Hi Gang:

Well the mobile radio is on its way to New York state, so
that one is off the list. I still have the Ft-50R, which is
being sold for a friend without internet access. This unit
is only a year old (maybe a bit less), comes with a list of
extras and is in excellent shape. It was well-cared for.
Price is $400 shipped and insured, via UPS.

***There are no written, implied or stated warranties
included with this radio and it is being offered "AS IS".

7-3,
Erv KB8TNQ

> too, that they have a new radio about to hit the streets -- a low cost HF
rig!

The fact is that we ARE seriously CONSIDERING an HF radio. We feel strongly that there is a market for a very low cost, scaled-down radio with general coverage receive. It would make a great starter radio, as well as provide an alternative for folks that are fed up with the extremely complicated and expensive "contester's" radios being produced by other manufacturers.

We believe that there is a huge oppurtunity for this type of radio, given the upswing of the new sunspot cycle, the record high influx of new hams in the last 8 years, and the fact that no other manufacturer offers such a simple "starter" rig.

At this point we are soliciting comments from the ham radio community. We would like to know if hams in general would be interested in this type of radio, and, if so, what features they would like to see included and which features they could do without.

Of course, the more features that are included in the radio, the more expensive it would be. Our target price on a radio like this would be something like $500 or LESS retail, so we'd have to pick and choose the features we include very carefully in order to keep the cost of the unit down.

Any comments or suggestions regarding this project can be e-mailed to <premier@adi-radio.com>

From: Raynard Merritt <n8vzl@qsl.net>
Message-ID: <34f69d10.0@news.mountain.net>
Source record: 152126

I am seeking either an MFJ-989 or 986 Preferably the 986.

I will trade my Yaesu FT-411-E with two 5 watt batteries, mobile power supply.
Yaesu NC-29 desk top charger, Yaesu boom headset mic. Both batteries new, one homebrew the other factory. No manual, has been moded for rec only 40 memories, plus pll tone board (not installed still in box). Excellent condition.

I will also toss in a Tempo S5 HT, has no battery but has address to get one for
23.00 looks good works somewhat, needs work.

>
> Thanks
> John

The 950S was just the rig, no accessories. The 950SD came with the
DSP-10
unit installed, SO-2 High stability TCXO and I think 3 IF filters and
maybe
the VS-2. It is sort of like the difference between the FT100 and the
FT1000D.
Same exact transceiver but the D model has all of the NICE options
installed.
The DSP-10 was about a $400-500 option if purchased separately. IF
filters
run $125-175 new each. The 950SD should be worth $400-600 more than a
950S.

If you have the TS-950S/SD operating manual, it lists the accessories
that
are installed at the factory in the TS-950SD.

good luck

I have a copy of the LogPlus v3.56 logging program that I no longer use. Will sell it for $38 -- that's $5 less than you'll pay if you order direct from the vendor.

LogPlus is a great logging program - I've just moved to a Windows-based logging program instead.

See the features and download a demo of LogPlus at www.logplus.com

Delivery via internet e-mail only - no hard-copy documentation is included; there is a manual in Word format that can be printed out..

If interested, please reply via e-mail.

Beats arguging about who said whhat. And at least it shows some of us
are capable of debating without threatening nasties on each other. I
would say its nice to see that sane thinking people do have some
interesting views and its REALLY helping me with my studies this year!
Keep going guys (and gals if there is any)

BTW do we have any YL's on this NG?

From: Frank Krozel <frank@electronicinstrument.com>
Message-ID: <34F872AD.ABC0E3D@electronicinstrument.com>
Source record: 151942
Body handling: Binary attachment payload not displayed: vcard.vcf

I have a very clean Icom IC-756 for sale. $1550 Frank 630-653-9090
home

[One or more binary attachments are retained only in the source text.]

2882. Mods For MLA-2500 amp?????

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-28 00:00:00 UTC
From: "R.E. Dodson WB5APD EM84ak" <wb5apd@stc.net>
Message-ID: <34F87894.356C@stc.net>
Source record: 151943

I just picked up a Dentron MLA-2500 amp and was wondering if anyone makes a kit to change the 8875's to 3cx800's. Also where can I find Mods for this amp. Might want to convert it to 6 meters depending if I can find an easy conversion to the 3cx800a7's or not.

Thnx
Bob

I have for sale an ICOM 738 a little over a year old and used very little.
Asking $1000 obo.

saby1997@hotmail.com

2884. FS: OHR-400 QRP Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-28 00:00:00 UTC
From: Rod Logsdon <bike4life@bikerider.com>
Message-ID: <34F87EA8.EEC6C7EB@bikerider.com>
Source record: 151945

I've decided to sell my OHR-400. I completed it a couple of months ago and it is a great radio but I just don't do much portable operating. I have an Alinco DX-70T which I can use for QRP and I can take the money from the OHR-400 and buy some other goodies.

For those of you not familiar with the OHR-400 here are the specs:

- 4 band CW transceiver, 0perates 20, 30, 40 & 80 meters.
- Single conversion superhet receiver with an RF preamp, diode ring mixer, selectable AGC with manual RF gain control, 4 pole crystal ladder filter, selectable 4 pole audio filter and RIT.
- VFO covers 150 KHz on each band.
- Transmitter provides 4.5 watts out on 20 meters and will do a whopping 8 watts on 80.
- Power is fully adjustable from 0-full power by rear panel control.
- Very smooth QSK and sidetone with level adjust.

I have all the assembly instructions, parts lists, alignment procedures and schematics.

This radio is a 10 both electrically and cosmetically.

I am asking $300 which includes shipping CONUS.

I also have for sale an MFJ-1270B TNC. This is a TAPR TNC 2 clone which works both HF and VHF Packet.

I have the original manuals, radio cable, wall wart and packaging. The radio cable is configured for Kenwood.

Asking $65 shipped CONUS.

2885. help! trying to find relays

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-28 00:00:00 UTC
From: "R.E. Dodson WB5APD EM84ak" <wb5apd@stc.net>
Message-ID: <34F88533.DE8@stc.net>
Source record: 151946

I am trying to find a couple of relays.

First is a Schurack DPDP 12VDC RA4D012 (RA402012) Plastic plug in type

Next is a time delay Amperite 6NO75T 9 pin plug in.

I have a new in the box 12NO06T but need a 6 volt one instead.
These go
in a Detron MLA-2500 amp.

Any idea's where I can get these.

Thanks
Bob

2886. DFD3 will blow your mind

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-28 00:00:00 UTC
From: neil <neil@aade.com>
Message-ID: <34F886D0.8C1@aade.com>
Source record: 151947

Announcing DIGITAL FREQUENCY DISPLAY 3.

DFD3 has 10Hz resolution and digital filtering to eliminate flicker due
to roundoff error.

DFD3 has it's own band selector and mode selector which is set to match
the band and mode the radio is operating on.

TO UPGRADE BOATANCHORS:
DFD3 is for multi-band radios usually consisting of a crystal controlled
converter followed by a tunable (variable) IF. This includes all
Collins,
many DRAKE, many SWAN, and scores of others.
Each band is programmed for an offset which, when added to the measured
VFO frequency, produces and displays the RF frequency.
Each band can be calibrated to within 10Hz.

Here's the really neat part:
DFD3 WILL AUTO-PROGRAM ITSELF
for more than 80 different models of radios from more than 20
manufacturers. Complete list is posted on
http://www.aade.com/dfd3.htm#radios

FOR GENERAL PURPOSE AND QRP:
DFD3 allows for 1-32 bands. There is no law that says these bands have
to be on the same radio. You can store three 5 band radios,
a 10 band radio, a 3 band radio and 4 single band radios
all at the same time (or any other combination).
All you have to do is remember which bands go with which radio.

Data is stored in EEPROM so it is retained with power off.

Price is just $49.95 + $1.50 S/H in KIT form.

For backlit display module add $10.00

CHECK IT OUT AT: http://www.aade.com/dfd3.htm

Also check out:

DFD for QRP and single conversion superhets.
http://www.aade.com/dfd.htm

DFD2 for the Collins S line, Yeasu FT-101 and Kenwood TS-520S
http://www.aade.com/dfd2.htm

DFD4 for 0 to 3GHz, (make a bench top freq counter for < $80)
http://www.aade.com/dfd4.htm

Coming soon:
DFD4A for VHF, 0-400MHz, 10Hz resolution HF, 100 Hz VHF

L/C Meter IIB 1nHy to 150mHy, .01pF to 1.5uFd.

- yeah, the ADI HF radio should be compact like IC-706 (Mk II).

- the radio must be digital... not analog.

- HF + 6m (+ 2m) will be better than HF only

- 50W max or so

- one button, one function.

If you use an speaker-mic, this kind of problem may happen (it
happened to me a couple of times).

If you can't TX with regular button, your radio may need to be
repaired.

I recently purchased a Tek 422 oscilloscope to work on my tube projects....
I've looked on the web but cant find where I could get a manual (yeah I know
I should have got it with the unit but it was a good deal!)

Can anyone out there help me find a manual?

Matt

Source record: 151994

Hello,

Here's the problem: A few days ago I put my Realistic HTX-202 in the car and plugged it in the cig lighter, tried to key the mic, and noticed that the "TX Bar" didn't move, and I noticed that I wasn't putting out any power! I turned the radio off, then turned it back on about 2 hours later, and everything was fine. Next Day: I plug the HTX-202 into my 3 amp RadioShack base power supply, chat for about 30 mins, then go into standby. About 20 mins later I go to key the mic, and again, it won't transmit! So I put aside, and next day try it, and still no TX! RX is fine, but it won't transmit!!! If you have any ideas, PLEASE email me. I'm only 14, and I put down my last $120 for the HT last summer, and really need to get back on the air! :-) Please give me any advise! Thanks alot!

This appears to be SGC's rework of the Index Labs QRP radio. QST
was unimpressed with the Index Labs unit when they tested it, and
I see the published IMD specs for the SGC rework are still poor.

I thought this radio was subpar and overpriced when Index Labs offered
it, and it still appears subpar and overpriced after SGC has reworked it.
I would hope that this is *not* the target ADI would shoot for in a no frills
HF radio.

I'd suggest that an appropriate conceptual model would be something
on the order of the old Galaxy V MkII, except updated to solid state of
course. A nice compact powerful basic *ham* radio.

An internal keyer was an option. I'll tell you what I think about the
radio, I'm not selling mine. The IC735 had the longest production
run of any amateur radio ever. There had to be a reason for that.
And IMHO the reason was that the radio was right on target. It
did exactly what people wanted an amateur radio transceiver
to do. It still does.

Because they also happen to be loads of fun, never mind the fact that alot of those big engines put out "safer" exhaust than the cracker box engines found in smaller European and even some American cars of non-American decent. Sure, a Geo Metro puts out less exhaust than a V10 Viper, but the exhaust out of the Viper is more than likely ALOT safer to breathe directly. This fact is commonly ignored by the "environmental" division of American politics. If they only knew what technology does, and how it works, and what it is capable of.

I guess that is too much to ask for,

David

As I said, if the road is flat, it will go up. Getting stuck on a rock
implies a road not for a car. My point was, power isn't a problem with
American luxo liners.

but are having a problem finding a TNC to be used. The DX PacketCluster
docs say the use a Kantronics KPC2 or KPC4 also the DRSI TNC (no longer
made). Anyone have any of these items? If so please send me an E-Mail
at kc0uh@pcisys.net with your price. If anyone knows where another TNC
was configured for use with the PacketCluster program sure would like
that information if possible and maybe a point of contact.
Only requirement we have is that the TNC must allow at least 10 users at
one time on VHF.
Thanks
Steve

Body handling: Binary attachment payload not displayed: vcard.vcf

I have a faithful Icom 735 that has a problem.
While tuning (from either direction) the receiver unlocks (tx also
unlocks but not for
long) when tuning from the following:
0.198 - 0.193
1.198 - 1.193
2.198 - 2.193,etc.
This happens an all bands, and I use it for 2 meter transverer work.
Going below 144.200, (28.200) is now impossible.
Anyone out there have any ideas???
frank

I just purchased a AR-146 and AT-600 and would consider buying a $500
HF radio from ADI for the CAR .
My feeling is that ADI simply buys the rights to produce out of
production radios in TAIWAN, CHINA.
So my guess is they would make a Alinco DX-70 without 6 meters or
a Kenwood TS-50 without some features or less power out. Somthing like
that. I think the ADI AR-146 is a Kenwood TM-241a Clone. Some of the
ADI handhelds are Standard Radio Clones (out of production models with
all the Bugs out plus free Options included that others had to pay for!)
For Cheap $$.

I sent a Email to SGC asking if they plan on making a higher power model
such as 50 or 75 watts. I figure it wouldn't be a hard thing to do and
they would get to sell to all the guys who say:"20 watts isn't enough"
I know I could get a cheapy CB amplifier for $100 to $125 that outs
out 200 watts PEP. But that would put out illegal spurs all over the
band. HEy, I just saw a ICOM IC-707 for $699. For just $75 I could gain
75 watts outut.

I think the Icom 746 will sell well as the HF section appears to be a
better radio in that department plus a built in tuner.

However, the FT-847 will also sell well for the guys who need 440 MHZ
for satilite work plus just repeater use too!
I can't decide.

Not really. We had a message store-and-forwarding system, and that's
about it. The opportunities that a real network provides are
substantially greater - digital voice, video, web access, etc.

Now, Now, let's keep this in perspective:

Sean, you don't get "ripped-off" just because you pay more than the going rate for something unless, of course, you're forced to do it against your will. When you fork over $100 for something it's because you felt it was worth at least that much TO YOU AT THAT TIME, regardless of the "going rate."

John, by advising that "it sells for $179 new" Sean was responding only to you (in case you weren't aware of the going rate), but also to the rest of us. We very much APPRECIATE his input, because for lack of information we might end-up paying more than the going rate, REGARDLESS of what it's WORTH to us. And he certainly doesn't need a BADGE to advise US of exactly what we came on this site to discuss.

Most of the family cars here in California are 4 wheel drive utility vehicles or 4 x 4 pick up trucks and easily capable of climbing a small 3000 feet hill. Sixty percent of new car sales are now this type of vehicle. These vehicles get wonderful gas mileage, anywhere from 12 to 20 mpg. They are also much safer to drive, you can actually rear end someone in a compact (comparable to a full size UK car) vehicle, drive over the top of them and continue on your way with out too much trouble. You pay the same insurance rate as on a compact vehicle, so all in all good value for money. There is also plenty of room for an array of Ham Radio equipment and antennas. I added the last sentence just to be legal in the news group. To post to this group I think that one should be required to mention something about radio, no matter how trivial or remote this may be.

1.Avcom Portable Spectrum Analyzer PSA-35A
For sale ****** $750 USA Wg Condition /new $1990/

2.Wavetek Satellite Receiver Test Set model 1470
********* 850$ Very Good Shape /new3100$/

Specification:
Avcom Portable Spectrum Analyzer PSA-35A
RF input 10-1750 Mhz
RF input 3.7-4.2 Ghz
LNA/BDC PWR +18VDC on RF Inputs
Referance Level 0-(-40)dBm
5-slide band select 0-500,270-770,950-1450,1250-1750,3700-4200
6-Preset frequency band
span 0-50 MHz/DIV
scale dB/DIV 2db and 10 dB
Line and Bat operat

Frequency Coverage 10-1750 MHz 3.7-4.2 GHz
Basic enough to begin with - sophisticated enough to grow with .
Ku and C band compatible
Built-in DC Block and Power for LNA's and LNB's
Accurately measures wideband signals commonly used in the satellite
communications industry
Lightweight (17lbs.) and Portable - Ideal for Test Situations
Rugged, Attractive Styling
Made in the U.S.A.
New Priced
at /$1,965.00/in http://www.fotronic.com/avcom/psa-35aspecanal.htm.

Troubleshoot system problems by observing output signals from LNA's,
BDC's, Line Amplifiers and Splitters, and other RF signals components.
Measure block system signals balance.
Identify and resolve terrestrial interference problems quickly
and precisely by displaying offending signals on the PSA-35A.
Customers can be shown the nature of TI problems for clearer understanding.
Measure and document satellite communication system performance after
installation or service. Customer should be given a copy of results per
AVCOM'S SASAR (Spectrum Analyzer System Analysis Report) to insure
customer confidence and satisfaction.

Progressive Satellite Communication Dealers, Repair Centers,
and Manufacturers will find AVCOM'S PSA-35A Spectrum Analyzer
to be an indispensible instrument for rapid testing and alignment
of satellite equipment. Problems that might otherwise take hours,
even days to resolve, can be identified and corrected in minutes,

saving time and money, while reinforcing customer good will.
An AVCOM Spectrum Analyzer will pay for itself quickly.
My price **** $950 USA

Specification : Wavetek 1470 Satellite Receiver Test Set**

Wavetek Satellite Receiver Test Set model 1470
Subcarrier frequency 0-9.999 MHZ /A,B/
Audio Pre-emphasis off,25-75 us /A,B/
Audio Modulation (Hz) 400,1K,1,5K, ext,int (A,B)
Subcarrier Select off,A,B,Disc,Mtrx
Output Level (dBm/75ohms) 0-70 and 0-10calibr
Mode(Video or Sweep), Center Frequency (45-95)
Sweep Width
Markers (on-off) A,B,C,D,E
Video -(Source-Ext,Int)(Chroma on,off)(Dispersion on,off)

********* 950$ Very Good Shape /new3100$/

****
*10 Days money back guarantee, shipping charge non-refundable,
personal checks have to clear first, postal or money orders
O.K. all items must be returned in condition sent,

For sale one Drake R7A, serial 32xx, with NB, 0.5, 2.3 and 4kHz filters.
Radio has no scratches, dings, dents, problems or modifications. Have
owners manual. The radio was used very little, and it is as close
to new as you will find one of these. I have no interest in any trades.
This is being posted at 1400 EST on 28 February. The best offer over $825
received by 1400 on 2 March takes it. Due to two canceled offers from
out-of-staters, I WILL NOT SHIP!!!! Pick up only, with cash. Repeat: won't
ship, cash only.
I am located south of Detroit Mich. Reply to my e-mail address only or
313-382-2213, tnx.

Source record: 152039

I'm trying to decide on whether to buy the FT-50RD or the TH-G71A.
There are obviously many folks who love the Yaesu but I'm curious about
what people's experiences are with the Kenwood. The 50 bucks off the
Kenwood is pretty attractive right now!

Thanks for reading, look forward to hearing from you!

2961. For Sale: Kenwood TS440

Good idea. Have done similar myself.

But I suggest lower value resistors. The number of 'turns' on the spiral of metal film resistors are fewer and so the inductance is smaller, and so the 50 ohm resistance is maintained up to even higher frequencies.

Try 50 x 2500-ohm, 2-watt resistors in parallel. The nearest preferrred value is 2400-ohms so use 48 resistors in parrallel. No-one will be able to detect the difference.

Or 20 x 1000-ohm, 5-watt resistors in parallel. That's the one I like if you can obtain 5-watt, metal-film resistors.

You will not have to drill so many holes in the single-sided copper clad boards. Keep the resistor leads very short to help conduct the heat from the resistors to the copper cooling surfaces. But do not make the size of the board at the HF end of the resistors any larger than necessary to keep down the stray capacitance. The grounded end of the resistors and copper sheet can be as large as you like. Bolt it to the can if its rectangular.

You are doing a service to the Newsgroup by reporting this. I saw some other similar posts and that convinced me to stay away from the FT-8100. It is a shame that the Manufacturers push radios out the door with known defects. I guess I will have to wait at least 6 months before ever considering buying new models.

Jim, I know exactly what you are talking about. The bad news is that it isn't just Yaesu who has this problem. None of the manufacturers are completely innocent, at least not the Japanese manufacturers.

The good side of the equation is that this behavior is forming a rift between the amateur community and the manufacturers. Some enterprising entrepreneur will see this as an opportunity and will supply the necessary wedge to finally penetrate the market.

The "Good Old Days" when Americans had lots of disposable income are gone. Just ask anyone who has been downsized. New jobs do not pay that much and real estate, enough real estate to put up an effective antenna, is becoming scarce. The entrepreneur that realizes the changing market demographics will be able to reap the reward. Unfortunately, the Japanese are now in the same position that they put we Americans in not to many years ago.

How about an HF rig for under $500? Possibly one that has a power output of say fifty watts on high power? Recent FCC rules changes make this more attractive than some may think.

Forget a zillion memories, I never use them. Forget complicated programming with dual and triple function buttons. Who needs it? Just give us a durable unit and place the emphasis on a clean Tx envelope and Rx audio, with enough audio power output that we older individuals can hear.

Ever since the US radio manufacturers closed down (not Ten-Tec), I have no sense of brand loyalty, and, in fact, am very displeased with the Japanese manufacturers. Icom, Yaesu and Kenwood treat us very poorly. I'm just waiting to jump ship to a better product for less money and with the service we deserve.

Just my $.02. And for those youngsters who are going to call me a dinosaur and tell me that I am against new technologies, I only have one thing to say - GO TO BED!

You would figure the Manufacturers would give a deep discount to the
first guys who buy the radio as they are the ones who get stuck sending
the radio back to be serviced.
These first time buyers get the Honer of paying $100 to $300 more and
getting all the headachs.

I just made some comments about converting cb sets to 10meters in rec.radio.amateur.misc this week, in answer to someone's question. It might still be unexpired at your site.

If you're talking about buying a new CB set today and converting it, it was my understanding that at some point the design (in general) was changed so that it was difficult to convert. The early PLL synthesized rigs were fairly easy to change frequency, and apparently there was a concern that some might change them to somewhere they shouldn't (ie CB'ers moving them to a completely illegal band). So their design was changed, and it was harder to move them to a new frequency. This is not first hand knowledge, but I do know that while there were plenty of articles about converting those early PLL CB sets to 10meters, they stopped after a certain point.

If you want to make a beacon, a CB set that uses a crystal to set the frequency can be used by simply changing the crystal and perhaps tuning things up a bit. Are such CB sets being sold nowadays? You used to be able to buy them, and they'd come with one channel installed, and a switch that allowed for a few more channels.

You might do well to look at fleamarkets and garage sales. I found a couple of CB sets in the neighbor's garbage one time.

Of course, once you start needing to track down a crystal and modify the set for use as a beacon (I presume they use cw), it isn't all that far from building a small 10Meter beacon from scratch.

Surplus Standard 19 inch equipment enclosures. These
enclosures have never been used !!!!!! Mounting space:
19" width x 70" height x 24" depth. Good for many types
of rack/shelf mounting applications such as; test equipment,
cellular and paging equipment, data com/server equipment,
and other applications. These are very well built Enclosures
(cabinets) with several features, $329 compare our prices. Go to
http://www.flash.net/~lhix for more information.

I didn't mean to single out Yaesu. Kenwood released the TS-570D for
$1500 and now they go for $1150 at a couple of Dealers (with coupon).
That radio can't seem to hold its memories and the batteries go dead
in a couple of months. Then Kenwood said to put the battery in the radio
with the Power Supply on. This didn't work either. i have seen countless
guys complaining. Perhaps the only thing to do is wait two years into
the production run for the bugs to worked out.

Your analogy doesn't hold alot of water (pardon the pun). You already have a much greater chance of falling down and breaking your neck while pouring yourself a cold one than dying from exposure to nuclear radiation from a well designed plant. Sure, there is always some way for all the wrong blocks to align themselves in anything, and thats my point, and why I used the term "almost 100%". Just as there are aliens controlling our minds, the plastic eraser on my desk could suffer spontaneous quantum deconstruction, wiping out 13 or 14 city blocks, or even more unlikely, American amateurs will have a high speed nationwide packet switched radio network :-) (couldn't resist). You shouldn't always place your bets on the "sure win" or you'll never progress. There is chance involved in anything.

Source record: 151865

Steve,

Juxtaposed with earlier msg re 847, my TS-570 experience has been interesting.

I have a fairly early one (bought in Oct 1996, about 18 months old now).

o No problem with the battery
o AT works like a champ, on all manner of antennas
o G5RV measures 5:1 in one case, tunes right up.

Maybe the early ones were the good ones, and my extra $100 was well spent!

Phil

IT IS SIMPLE TO CONVERT the CB to 10 meters. There are various Web sites

that sell CB radios(export models) cheap or regular CB radios for
$135 that include SSB that you simply hold down a few buttons and
now the radio transmits from 25 to 29.9999 MHZ. One brand is "CHEROKEE".
Go do a search under ALTA VISTA and go to the Web sites and links.
Also, you can get CB amplifiers that put out 225 watts PEP for $99 at
several of these places and the AMP in the Pictures look WELL BUILT.
They even have 5 pole Chebe.... Filters for lowpass at 53 MHZ. Yes, they
are advertised as 10-80 mtrs but work on 6 mTRS TOO!!
I am myself considering doing this as a cheap option to put out a decnt
signal from my car soonas 10 meters opens again. Yes, these CBs and
AMPs ar FCC approved to be sold in the USA for the 10 MTR HAM BAND.

And I quote from the GEET page:

"... some of the mixtures were done with mixtures with as much as 80% water."

I wonder if anyone will ever realize that as much energy as is derived from burning hydrogen and oxygen, it takes even more to separate it. There never will be any magical way to do it with minute amounts of power, or you would be tripping up physics as we know it.

In dream land, of course, the following would also be possible:

My next Camaro will get 1000 miles/gallon of water and do 60 in less one second, and weigh over 6000 pounds to achieve that good ride all the luxo liner buyers are looking for in a car. (and the US Amatuers will have a high speed packet switched infrastructure nationwide :-)).

On the other hand, I do think hydrogen will be our future fuel technology (after we have pumped every last existing drop of petroleum product from our crust), but it will be separated at solar stations that convert light to electricity and use it to desalinize and then decompose sea water into H2 and O2. Those stations may even end up being powered, not from solar cells on the ground, but satellites beaming down microwave energy from collectors in space. It would be alot cheaper than ground based solar energy collection, given that we one day achieve cheap spaceflight.

Also, one thing the green planet enthusiasts don't consider, those electrical cars that they so gladly will buy up when they become available, will have synthetic lubricants in their gear boxes, motors, and air conditioning systems.

I have Had mine for a month and a week. It is great and seems to be well built , No problems as yet. The x band repeat works very well and it has great scanning speed. I programmed with the adms software. You cannot enter freq on the mike dtmf pad, Use it as a base mostly and for x band repeat from 70cm to 2m to increase my HT range.

If your thinking about get one? I recommend it as a good radio.

I did it and it works as advertised, except I used an individual and received a better discount without all the high volume buying. Make sure they sell you the American version. I bought a W32A cheap (the dream of every ham, cheap that is!)

On (Sat 28 Feb 1998) I had a QSO with UK Radio amateurs who
were happily sending packets to USA, to telnet to a group who included
a USA amateur who was in the same group - but using a regular ISP
internet connection!

It seems the guys who set up this "net" issue their own internet ID
number sets (the famous sets of digits separated by fullstops), except
the first number is 44 (instead of a 3-digit one). The "44" signifies
a amateur packet connection, and such an ID should not pass through
a server here as if it were a regular internet packet.

I tried telnet into this packet server, but I must have done it wrong.
My ISP accepted the address, but failed to connect. I freely admit
there is just so much I don't understand about how this is done. I
think that launching a packet to a US station by amateur radio
is unlikely to be illegal here, just because some other users of that
station happen to send their stuff via an internet route..

While this subject is interesting enough to roll up unusual numbers
of postings, I have got to admit that it is probably in the wrong group.
I'm not fussy or pedantic. Say it here if you like - but you may
expect some flak eventually from the net "hobby bobbies".

>>advise! Thanks alot!

Hi.

Have you been running it on high power on 12 or 13.8v? A common
failure in the HTX-202 is overheating of the final transistor when
doing this, and after a while it partially melts the solder
connections on that transistor, and it becomes intermittent (or stops
working completely).

Can you hear the signal on another HT or 2m rig that is nearby (within
a few feet)?? If so, I'd bet the overheating and partly melted solder
is your problem.

The cure is to VERY carefully resolder the connections on that final
transistor. If you aren't comfortable working on it, get someone to do
it for you.

3014. Yaesu VX-1R scanning problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-01 00:00:00 UTC
From: huntsman@royal.net
Message-ID: <6dbttl$56q$1@nnrp1.dejanews.com>
Source record: 151903

I discovered this week that the VX-1R does not stop scanning on active channels if the CTCSS is enabled on that channel.

Not sure what would cause this and my dealer and Yaesu don't seem to have a clue about it.

You can see the signal strength indication jump as the radio passes by the active channel, but it does not stop scanning.

Anyone else encountered this with the radio?

Source record: 151909

To all that have been looking for the ultimate belt clip for the great little VX-1. As you know Yaesu over all did a great job on the little VX-1 micro ht. But to be expected there were a few simple design flaws that slipped through the cracks. One that really bugged me was that cheap little strip of plastic they called a belt clip. There's no doubt

this has detracted from the over all quality of the radio. I know guys that tie strings to their belt loops in fear that the little radio will unknowingly slip off. This new clip has a firm, quality spring and two 90` bends at the tip for added security. It won't come off unless you want it to.

I have for sale commercial quality spring action belt clips for the VX-1

micro ht's. They have a factory fit look and are very durable.

$14.95 plus $1.50 shipping.

please email me for ordering information

Bob..... KN6GA

(I'll post a picture of a VX-1 with the one of the new belt clips soon)

> Ben, M1BYP, Nottingham, UK
>
>

My experience with the Yaesu FT-8100 was not good.
Several days after purchasing it, I had to send
it back to Yaesu. It would not cross-band repeat.
When I phoned, the customer service people told me
it was a known problem and I would have to send it
back. I wrote the president of Yaesu and complained about their
poor quality control, about their willingness to sell radios with
known problems (they should have been pulled off the shelf) and
for expecting customers to pay return shipping in these
situations.

Within a few weeks of getting the radio back from service, I had
to send it to Yaesu again. I had compiled a list of
five problems. Three of them were known problems.
I sent it back a second time. Within a week of getting
it back the second time, one of the fixes they made
failed and I was told to send it in a third time.
I refused. I requested a new radio. They declined and
I sold the radio at half-price. I wrote the president of
Yaesu for a second time and explained that I did not purchase
Yaesu equipment for the privilege of packaging up radios and
sending them to California for repair. I think they did not
want to give me a new radio because they knew that
these radios contained known problems that would require
repair.

I own 8 Yaesu radios. For the most part they are excellent. The
early serial numbers of the FT-8100 were unacceptable. Perhaps
they have done better with the later ones.

By the way, I have since purchased the Icom 2710. It is a fine
piece of gear.

Good luck, Jim, W1PID

Source record: 151912

I have about 10 speaker mics that are compatible with the later Yaesu models and probably many other radios. Mic uses the pretty common two pin connector. On the Yaesu/Vertex models the interface adapter that converts the single pin plug (programming port) to two pin (rx audio/mic) input/output jack is STILL REQUIRED...and that must be purchased from a Yaesu dealer.

Mics are made by Maxon.

$10.00 each plus $2.00 to ship

I have a FL-2000 Amp made by Yaesu-Musun, It has 4 ea 6kd6's for tubes. I get 600 watts out of it on CW. I want to change it from 117 V to 240 volts AC operation, The manual says u can do this, but it don't go into detail and tell u how to change the transformer wiring,etc. Does any one happen to have this information and would like to share it. It has 2 transformers, one for bias etc of the tubes, probley have to change both. In the shack, 240v is available for the amp. 117 v out there will not carry the Linear Amplifier. 73 Rocky

Yaesu FT-847. Sounds like a great radio to have. It is one you can grow into. It should be available sometime in March 98. My question is, will it be a good rig right out of the box, or should one wait six months to a year to purchase. Are new ham rigs like computer software. Don't buy the first version, wait for the second version for the bugs to be worked out. ANY COMMENTS?

Hello !

I'm going to buy a license-free 70cm LPD handheld transceiver. I found two interesting devices on the market and just can't decide which one to choose:

- Kenwood UBZ-LF68 'FunKey'
- Stabo XP-500 or XP-400 (built by Standard Corp.)

Does anybody has some experiences concerning these transceivers ?

If you can stand the wait, I would hold on a purchase until the ARRL and several other organizations evaluate it and publish the results. It always seems that in a QST review of a rig, some problem is found which the manufacturer announces will be fixed in all new models. I am certainly going to wait for a review before I would consider purchasing it. Besides, after about 6 months, there might very well be a coupon special to drop the price by about $100.

3036. FAQ: Plectron and Motorola Alert Monitor Receivers

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-01 00:00:00 UTC

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net |

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of

completeness. They are crystal controlled radios and
feature priority scan and a separate trimmer capacitor for
each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

>- yeah, the ADI HF radio should be compact like IC-706 (Mk II).

I'd be willing to trade off minaturization against superior thermal
sinking.

>- the radio must be digital... not analog.

I'd like an all digital radio, but the technology isn't quite up to
building one yet. A good sound analog design would be fine.
The receiver front end should be bulletproof, and upconversion
should be employed to avoid excessive birdies. Perhaps DSP
could be used in the second IF to save the costs of a selection
of filters, ala Kachina. But I'd be satisfied with a basic 2.1 kHz
filter and a 500 Hz filter in an analog low second IF.

>- HF + 6m (+ 2m) will be better than HF only

I disagree with this. HF-only makes more sense in a low
cost radio. Adding VHF to the radio increases cost and
complexity.

>- 50W max or so

I disagree with this also. A HF radio should be a minimum
of 100 watts. That allows barefoot operation on all HF bands
in SSB, and will drive available amps on those occasions
when that is merited. Ideally the radio should be large enough
to provide adequate heatsinking without the need for a fan.

>- one button, one function.

That requires a large radio, or few functions. I don't have
a problem with intelligently designed menus, the IC-706
is a good example of this. OTOH, for a basic low cost

radio, there needn't be a huge number of operator functions
or operator controls. Every knob and switch costs money.

I have a like-new Kenwood TH-78A with all original equipment (box, manual, antenna, wrist strap, charger, and battery in excellent condition), and the following accessories:

ME-1 200-memory expansion chip (total of 250 memories)
SMC-34 Remote-control programmable speaker/mic with volume control.
SC-35 Soft case for standard batteries
SC-36 Soft case for large batteries
KLF-3 Filtered cigarette lighter power cord.

The radio is opened up for full tx/rx capabilities and crossband repeat. It has seen only minor use, and works superbly. It is the most full-featured dualband ht available, and will give you good service. I have all of the original packaging and documentation for the accessories
as well.

Price is $350. Reply here or email me at one of these addresses, after removing NOSPAM-:

NOSPAM-wd4sgu@juno.com

If you have the information available, take a look at
the specs for PSA's HDI engine. This is going to replace
the already excellent XUD fitted in Citro&#65533;ns. An already
excellent fuel consumption reduced by 20%. CO2 reduced
by 20%, HCs by 50% and particulates by 40%. Ozone
forming potential down 50% and produces no smoke.
The only remaining problem is NOx which is dealt with
by a cat-converter.

Good diesel fuel may well be the same price as unleaded
petrol (here) but the fuel consumption and environmental
advantages of diesels will mean that as the government
increases the tax on fuel by (20p/litre/year was it?),
the public will be forced to look more closely at this
fuel. Un-facts pushed by our ghastly media have managed
to generate an anti-diesel culture here which isn't to
be found anywhere else in the rest of Europe.

Right! I always read the label. Latest best lager was
Tiger from Singapore. Imported. Best continental lagers
are Kronenburg 1664, Stella, Staropramen (or any genuine
Czech lager), Zipfer, Stiegl. Kronenbourg and Stella you
have to be very careful about as they are brewed in England
without hops and are as tastless as English bitter.

From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6da8mo$6qk$5@csu-b.csuohio.edu>
Source record: 151975

WANTED: AN-USN-118B Military Cardmatic Tube Tester with the
usual cards & accessories that went with it.

Willing to pay reasonable price for your tester or swap for
Hewlett Packard Laserjet II, 8 Pages Per Minute laser printer.
This printer is one of the best, most reliable and economical
laser printers that Hewlett Packard ever made and is still highly
desirable today. It has a low number of copies on it for its age.
I do not wish to sell the printer outright, but rather swap for
the tube tester I want.

Will provide details of the above printer if you're interested in
same.

Thank you.

Message-ID: <34f8acdc.2801032@eskinews.eskimo.com>
Source record: 151978

Amplifiers for sale.....

600W PEP, 400W continuous, wideband, class AB linear amplifier usable from 15-150 Mhz. Single drawer unit includes Kilovac COR switching, adjustable time delay, and accessory switching. Amp utilizes a wideband splitter/combiner combo, auto bias switching, thermal protection, and uses MOSFET transistors. Amp delivers extremely clean signal and is overdesigned to provide 100% duty cycle at 400W. Requires 28VDC @ 70A peaks for a power source. Asking $500 or best offer. I would also consider a trade for a solid state HF transceiver.

250W HF solid state base amplifier with power supply, receive preamp, and COR circuitry. $200.

100W Continuous duty wideband amplifier module usable from 400-1000Mhz. Capable of over 150W on 70cm. Requires 28VDC power source. Asking $300 or best offer.

If interested, please reply via E-mail at wizard@eskimo.com

3059. Re: info / Drake r8 vs. Drake r7

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-01 00:00:00 UTC
From: Ben Wallace <bwallace@sd.cts.com>
Message-ID: <01bd44bb$bcf6b5a0$3506a3cd@bwallace.cts.com>
Source record: 151980

B.A.

I have a Drake R8B and 3 R-7s....from my perspective:

R-7's crystal filtering is exceptional, R-8 uses LC filtering
R-7 incorporates IF Notch, R-8 incorporates AF notch

R7 is very sensitive, R-8 is slightly more sensitive
R-7 has great dynamic range, R-8 dynamic range slightly better
R-7 controls are superior, R-8 controls suck -- AF control to small, Tuning knob to small
R-7 digital display is simple and primitive, R-8 LCD is very functional
R-7 is of quality construction, R-8 is solid but not up to par with R-7
R-7 uses plug-in circuit cards and through-hole construction -- You have a better chance of repairing an R-7 yourself (with svc manual)

Bottom Line: Both are exceptional receivers. The R-8B has a slight edge on the R-7. The R-7 has better and larger controls.

3063. Re: the icom-735

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-01 00:00:00 UTC
From: Dave Bernstein <dhb@mediaone.net>
Message-ID: <34F8EBD2.D746A97A@mediaone.net>
Source record: 151984

I bought an IC735 new in 1990 as my first rig, and truly enjoyed it. Its no longer my primary rig, but served me well in that capacity for six years. The receiver is particularly sensitive, yet handles strong signals on nearby frequencies without overload.

QST ran one of their in-depth reviews of the 735 some years back -- I think you can still order back issues over the phone.

Being relatively compact, most of the front panel controls are quite small -- particularly the sliders for RF gain, RF power, mic gain, and VOX control; it took a few weeks, but eventually the required movements became automatic. An electronic keyer is a plug-in option; I didn't have one, and so can't say how well it works. QSK does work great, at least up to 30 wpm or so. The pass-band tuner and manual notch filter work well, and he noise-blanker is useful at least some of the time.

The 735 has RIT, but not XIT; given the easy-to-use dual VFO scheme, I never really missed it. AM output is limited to 10 or 20W. There's no RTTY mode, but AFSK works fine (with a KAM, at least). There's no numeric keypad for direct frequency entry, but there's plenty of software around that lets you do this from your PC; if you go this route, building your own interface is a lot cheaper than paying ICOM $100 for theirs -- take a look at the QST-published circuit in http://www.ambersoft.com/Amateur_Radio/Icom_Interface.jpg, which you can easily build after a quick stop at the nearest Radio Shack.

Over the years, I did encounter a few problems. Both LCD illumination lights eventually expired; I never bothered to replace them, and so can't say how difficult this procedure is. I did successfully add a 500 hz CW filter, which in the radio' confined quarters was nerve-racking but not really difficult. The internal inductor that protects the mike input from RF is too low a value -- I had to add a 10X larger external one inside the mike connector shell to eliminate RF feedback while I was still running barefoot into an open-wire fed dipole. The radio's "SEND" output has neither the current-sinking capability nor the voltage-handling capability to directly key an SB201 or SB22X amplifier; you must interpose a low-current 5V or 12V relay, or an appropriate buffer stage. I found that directly connecting the KAM's AFSK output to the 735's modulator input (through the rear-panel ACC plug) results in distorted SSB transmit audio; I quickly tired of connecting and disconnecting the KAM each time I switched between RTTY and SSB, and so added a reed relay inside the KAM to break this connection whenever the KAM isn't asserting PTT. No, I don't own stock in any relay companies.

Compared to my 706, the 735 is generally easier to use -- its functions are directly accessible on knobs and keys (albeit small ones) rather

than via menus, but the 706 is a better travel companion and provided me with an interesting introduction to 6 meters last summer.

Overall, I think the 735 is a very good transceiver, flexible enough to play many roles. Eventually, mine will migrate from shack backup to beneath the dashboard of my car, where I'll attempt to discover just how much DX one can work mobile during a sunspot peak.

73,

Dave, AA6YQ/1

Hi all!

I bought a Lafayette HA-50A FM Radio receiver (30MHZ to 50MHZ) recently in
a flea market.
Now I am starting to get more interested in this thing and would like to
buy a transmiter (or transceiver).
Do I need Liscence to use this band?
Wich transmiter or tranceiver would you recommend to use for this
frequency?
How far a trasnmitter in this band can go?
What type of antenna I need for this receiver?

As you probably noticed, I am new to this hobby ....

Cheers

Milton Martins

This may be a dup in some newsgroups, and i applogize.

I have an Alinco 599t, and a KAM+.

Receiving is no problem

Transmitting from cpu to tnc, no problem, the tx lights up on the tnc, but the radio doesn't key up.

I have tried to reset the tnc via pulling the battery. I need to know if anyone has the pinout for the alinco. The cord I have is a premade cord, and the dealer said it was for alinco.

Can anyone help.

Thanks, and again sorry for the duplicate in some news groups

Stephen

You will need to remove botton cover and top cover from your
FT-8500. Carefully unplug speaker. Remove the 4 Brass screws
from the control unit. (This is where the front panel connects,
if you don't have remote kit). Carefully pull front control unit
from main unit, then remove the 3 Brass screws from the circuit
board, and pull board back, you'll then see the green wire hiding
there cut it and then tape it. Re-assemble then reset the CPU.....

A low-tech yet functional interface was published in QST a few years back; there's a schematic at http://www.ambersoft.com/Amateur_Radio/Icom_Interface.jpg.

The protocol is described on page 39 of your 706 manual; a more complete description is allegedly available from ICOM, though its said to omit commands for recent radios. Not a lot of code is involved, but since I'm certain that appending examples to this message would generate a flame or two, I've assembled some notes and code fragments in http://www.ambersoft.com/Amateur_Radio/Icom_Control.htm for you to peruse. I'll be happy to answer questions via email; if need a quick response, I'm more responsive to dhb@rational.com than to the return address contained in this message.

>filter and a 500 Hz filter in an analog low second IF.
>

I like to see a low cost no thrill HF rig with good selectivity and
sensitivity -- build in. No optional filters. Do it once, and do it
right. DSP or not doesn't matter. The narrower the skirt and utimate
rejection is a plus. More features add cost to it.

>>- HF + 6m (+ 2m) will be better than HF only
>
>I disagree with this. HF-only makes more sense in a low

>

Any bells and wistles that add costs to the rig will be defeating the
purpose. A low cost HF rig is an HF rig, nothing more that that. I
don't mind if it doesn't have a general receiver.

>>- 50W max or so
>
>I disagree with this also. A HF radio should be a minimum
>of 100 watts. That allows barefoot operation on all HF bands
>in SSB, and will drive available amps on those occasions
>when that is merited. Ideally the radio should be large enough

>to provide adequate heatsinking without the need for a fan.
>

As a low cost HF rig, it should share 2 functions.

(1) Back up rig -- Most linears require 65W to drive. 50W is just
not quite there yet.

(2) Mobile rig -- A little edge to cut through the noise. Half a S
unit over the 50W version is not much to ask for.

>>- one button, one function.

Amen!

>That requires a large radio, or few functions. I don't have
>a problem with intelligently designed menus, the IC-706
>is a good example of this. OTOH, for a basic low cost
>radio, there needn't be a huge number of operator functions
>or operator controls. Every knob and switch costs money.

I am not very sure if a basic, low cost HF rig should have a fancy LCD
display, a 16 bit CPU, or elaborate controls. I think that it should
be a solid performer with no thrills (even LED freq. readout), low
noise floor, high dynamic range, 100W clean Xmitter, PBT, notch, RIT,
all mode. A rig that can let the first time HAM's to make some decent
DX QSO's, as well as allowing the big guns to fire. Almost forget --
a complete service manual for future self maintainence would be the
icing on the cake.

This unit is in great shape, face is new, chassis is too! Third tube added just recently and works great. Over 2KW OUT! One new tube and two other good ones. Full output. Guaranteed or your money back; Just back from Omega Elec. for tune up and to adjust the automatic systems. Shippable easily in two boxes, I will do so for $1400. Including insurance etc. to Lower 48. You will be please. This amp is no-tune on 80-15 also does 10 and 160. Performs quite well on the Warc bands, its all you could want! Thanks, Murray Neece Odessa. TEXAS. PS, if youll meet me within 200 miles of Odessa, Ill take 75 bux off!

> Steve - WA6GSD

Steve,

That is a very good deal. I've used my TS820 for over 18 years,
and I would not part with it. Someone should snap that one up.
(I am tempted myself!) In case others do not know: The TS820 has a
built-in AC supply, pi-net tuning (no fussy solid state SWR shutdown),
and has FSK built-in, which the TS830, 430, and 440 do not have. Also
has a built-in (small) speaker. Mine still works perfectly after
thousands of hours of CW and FSK operation, with original 6146 final
tubes. It is a great AMTOR/PACTOR rig also, switches in under
15 mSec. In addition, it has an extra, non-dedicated spare bandswitch
position (AUX), in addition to WWV/JJY band position.
Years later, if you (ever) want to part with it, it will likely be same
or better price as when you bought it.
'Nuff said.

73,
Don, W6JL

I have 2 pieces of high quality video gear which I
would like to either sell or swap for radio gear
(in particular, a NICE 2m/440 dualband mobile rig, HF gear
etc). I never put together the video production/radio project I was
going to, so I need to "cut my losses". I have the following:

1. BARCO multi-freq. cross hatch pattern generator. Has vert. freq settings
of 50, 60, or 100 Hz, and Horiz. freq of 15,18,21,25, or 31 kHz.
Output is either RGB TTL or RBGS analog. In great shape.

2. Electrohome NTSC Decoder. Has 2 NTSC video inputs (BNC connectors) and
RGBS outputs. ALso in great shape.

Let me know if your interested and what you're offering in way of sell/swap.

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

```
------------------------------------------------------------
FORSALE -- TINSLEY LABS CLASSICAL CASSEGRAIN TELESCOPE !!!
------------------------------------------------------------

I have for sale a Tinsley Labs 8-inch Classical Cassegrain
telescope, complete with the original German equitorial
mount and clock drive. Tinsley produced these fine scopes
in the mid 1960s and are known for their fine optical and
mechanical properties. They were (are) research quality
instruments which are quite rare and retain their value.

In mint shape, they go for around $3000. The one that
I have is in very good condition, but needs a few minor
items to bring it to "mint", as follows:

- mirrors are excellent, no scratches or chips, and
bright. Although very good and workable, a
recoating would make them mint.

- clock drive needs an external 12V battery pack and
rheostat to make it operational (this is as it was
intended). A nicad pack or motorcycle battery would
be appropriate.

- A low tripod or pedestal base (about 20" high) and
"rocker box" is needed for the equitorial mount to
sit on.

- the optical tube has some scratches in the paint and
a small dent, which absolutely does NOT interfere with
the optical path. Paint scheme is the original Tinsley
gray.

Thats about it. I just don't have the time to use this
scope and it's too valuable to just let it lay idle.

I'm asking $2150. for scope and mount (and absolutely will
NOT sell them separately).

The equipment is located in Monmouth County, NJ. For
further information, please contact me.

Thanks,

>
>I bought a used TM241A that has the 121-170mzh receive mod.
>It makes the radio intermod unacceptable to me. I need this
>receive mod so I can undo it!

The Kenwood TM-241A came from the factory capable of receiving from 118.000 to 173.995 MHz (with 118.0 thru 135.995 being a-m mode for aircraft radio reception). There is no "mod" for this. There is a mod to enable transmitting from 136.000 thru 173.995 MHz, but that isn't what you're referring to. TM-241A is very susceptible to intermod if you operate in a congested area with a lot of RF in the high band range, especially those high-power pager transmitters. I sold both of mine for that very reason. My TM-261A is MUCH better, but it still gets torn up when I'm in "RF alley".

You have really two options, neither of which you're going to like. You could sell the TM-241A and buy an older 2m rig that only receives inside the 2m band, such as the excellent TR-7930 or 7950, which had bulletproof receivers that were the most intermod-free I've ever seen in 21 years of hamming. Your other option is to purchase one of the new 2m bandpass filters that attenuate everything outside the 144 thru 148 MHz range, which would virtually kill any chance of receiving any business, public service, aviation, or weather broadcasts (which it sounds like you don't want anyway). I don't know the manufacturer or cost of the filters but I'm sure someone can help (or you can check the QST ads).

Good luck.

3084. Question about DTMF paging of FT-50R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-02 00:00:00 UTC
From: LIUXI YANG <liuxi.yang@Eng.sun.com>
Message-ID: <34FB286E.8784CC21@Eng.sun.com>
Source record: 151754

I have being trying to use the DTMF paging with my FT-50R.
I have the following questions.

1. The trigered paging works for simplex. How to make it work
via a repeater? The repeaters in bay area mostly have autopatches.
They simply "eat" all DTMF tones. Even with the access code to
the repeater, it is still difficult to get the DTMF tones passed
on the air since I don't know why the key pad does not generate
DTMF tone with key punch. I can only preprogram them in to the
memory.

2. Is there a way to progam to gererate the DTMF tone with different
delay pattern?

Thanks a million!

What about YAESU? I bought an FT1000MP. The brochure clearly indicated that the radio had memories that could store TX and RX frequencies. I was only going to buy the radio to use it with the supplied transverter port on the back for 2 meters. When I got the radio I found out that it did not store split frequencies.... so I could not store the 2 meter repeaters (false adv. #1). Then I went to use the transverter port on the back. The brochure claimed that the radio had a -6 dBm output port. I measure the output.... (-31dBm) useless without an external amplifier. (false adv #2) plus I had to cut a trace on the board and solder a switch (Why should I do this on a new $2800 radio). Then I buy an FT-8100 to use it as a crossband repeat link. The brochure clearly indicates that the radio has this capability. Well, guess what? The radio does not crossband. It has an inherent problem and it only works in one direction. It is a known problem and they keep selling broken radios expecting people to waste time and money to send them back. Then they get a rigged radio with resistors and wires dead bug style. Like the projects on the back of the ARRL handbook!

These JAPANESE manufacturers are doing us and we keep supporting them. At some point we need to make them understand that we are the ones with the cash.

Piet.

Don-

I'm also considering a TS-570, so I'm interested in the answer to your
question. However, I'd like to point out that the TS-450 tuner specs
indicate that it only works for an SWR below 3:1, when it actually does
better than that on many frequencies.

The following item for sale new in the box: CSI (Connect Systems Incorporated) auto patch (FULL DUPLEX) model CS800 with manual, $200.00 plus shipping.

3094. FT-50 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-02 00:00:00 UTC
From: rgoncalv@mozart.si.ualg.pt
Message-ID: <6dfebgeod1@wagner.si.ualg.pt>
Source record: 151764

Hello,
I've bought a Yaesu FT-50R, from HAMSTATION (www.hamstation.com) in USA.
Now because I live in Portugal (Europe) I've to send the radio to the local
equivalent of FCC, to test if is suitable for use in Portugal. For which,
I need to know what is the default BAND(*) for Yaesu's radios that are
shipped to Portugal or Europe... My radio's BAND is A1 (USA).

(*) Process to know what is the BAND:
Hold down LAMP + PTT + KNOB and press POWER.
In my case I see BAND A1.

Please, if you know which is the Band for Portugal and/or Europe, or how to
change this radio for EUROpean settings email-me !

Thanks in advance,

Ricardo Goncalves
CT2*** (Expecting for the license of my radio)

3095. FT-8500: I need a summary sheet of control functions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-02 00:00:00 UTC
From: "William A. Childress" <km4dt@mindspring.com>
Message-ID: <6dfhog$nul@camel12.mindspring.com>
Source record: 151765

I found a deal on a Yaesu FT-8500 at a local pawn shop the other day. However, I don't have a manual for it. I've already posted a message to Yaesu about the cost of the owners manual. Could someone help me out by posting me a cheat sheet so I can check out the rig thoroughly before I'm stuck with a buggy rig?

Thanks,

Alan <KM4DT>

The one I had 15 years ago was aptly named, on a spectrum analyzer it
covered the spectrum from 120-165mHz. Very careful alignment with a SA
cured it but if you tuned for max power(common practice) you got the
Spectrum.

There isn't a 121-170 rx mod for the 241. It receives from 118-174 mHz
as received.

>one memory with another but says nothing about deleting.
>
>Thanks
>John

John...I found that the only way to effectively delete a memory in the VX1 is to mask it. It will then be available to re-assign when storing a new memory. There is no way to empty a memory short of a cpu reset that I know of, but the masking is effectively a deletion. Incidentally, you can tell if a channel is masked very easily by, from the vfo mode, pressing the fw button for more than 1 sec. Then scroll thru the displayed memory channels. The ones that blink have something stored in them. The ones that do not blink are either open or masked.

Hope that this is of some help for you. By the way, my old yaesu ft-11 was set up the same way, i.e., no way to directly delete a memory channel.

3105. Radio Shack 2m/30W amplifier on sale for 59.- -- Good price?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-02 00:00:00 UTC
From: Ernst Niebur <niebur@russell.mb.jhu.edu>
Message-ID: <m2ra4l6l34.fsf@russell.mb.jhu.edu>
Source record: 151775

Hi everyone,

I passed my Technician test last week and today my call sign showed up for the first time at QRZ.com, so I guess I can consider myself a ham now :)

Here is my first question to this group: Radio Shack has a sale on a 2m/30W amp, for $59.- instead of $99.- Is this a good amp (I am not really sure what is important for an amp)? And, is this a good price; should I snap up one right away?

What I would want it for is to put it in my car and thus use my (brand new :) HT also as a mobile, or even as a base station. Would this make sense? I realize that this would limit me to 2m so I wouldn't be able to use half of my dual-band (2m/440MHz) HT (a Yaesu FT-50RD, FWIW). I saw there are dual-band amps out there, too, but the one I saw was $180.- If I _have_ to, I could save my money and buy one of those at some time but I wonder if it wouldn't make more sense to buy a 2m amp now and add a 70cm amp later, when the next sale comes along.

Thanks for all input!

--Ernst (ahem, "KB3CEE" :)

Herm, sounds good to me. It gives you some room to work with.
I ocassionally sell off some stuff. When I offer it for a fair price, I end up selling it for an unfair price (unfair to me). If I offer it too cheaply, folks shy away thinking its broke, even when I tell them its fully functional and pretty to boot.
Stick with your price and when a serious buyer comes along you can reach an agreement that you can both live with.
If you're giving stuff away (which is what some of these knuckleheads think), here's my e-mail: burkefam@icss.net

The manual warns about extreme matching stretches with the auto tuner. Someone reported a cap failure on the t/r amp relay which I found with mine too. I also had a blown discharge cap which seems to say something is amiss here...this also let to burn thru in the t/r relay. I don't know what caused this yet, but I don't plan on using the auto tuner in the future. Its possible the rig took a "hit" before I got it. I don't know. Other wise its a neat rig. Best feature over my 450 is the auto notch. Some tx audio tailoring possible. Otherwise well built and according to the tech whose fixing mine, easy to work on.

I have a mint-condition Kenwood TS-520S HF transceiver for sale. This is an excellent transceiver for a new ham or someone who likes units with tube finals. 100W output. It doesn't tune the WARC bands. Excellent receiver section. Very lightly used and carefully stored for the last ten years. I just fired it up and it works perfectly. Not a scratch or ding. Impeccable build quality. It includes:

Kenwood MC-50 matching microphone
Kenwood SP-50 matching factory speaker
Operator's manual
Factory service manual
Original double-box shipping carton

I'll also throw in a very nice manual telegraph key...a New Viking that weighs over a pound and isolates all the current-carrying parts in the base. The best feel of any key I've ever used.

I'm asking $350+shipping but will entertain any reasonable offers. I'm in the Seattle area.

Please get with me via email if you are interested. Thanks,

- Mark (N9AFL, markjenn@halcyon.com)

From: Phil Wheeler <w7ox@ix.netcom.com>
Message-ID: <34FB2BA4.DDCAAF5D@ix.netcom.com>
Source record: 151788

My impression is that the audio of the 706MkII is low on FM. A friend of mine has one and seems to have low audio; got better when he maxed out the gain. But it depends a lot on how loud you talk (he tends to be soft-spoken and how close to the mike you are.

I use mine only on SSB (don't work 6 M FM mobile, and have a Kenwood 742 in the car for 2/22/440 FM). I am very pleased with it on SSB, and get good audio and signal reports. Compression works great on SSB; don't know if it is supposed to work on FM (don't use it on FM).

To all that have been looking for the ultimate belt clip for the great little VX-1. As you know Yaesu over all did a great job on the little VX-1 micro ht. But to be expected there were a few simple design flaws that slipped through the cracks. One that really bugged me was that cheap little strip of plastic they called a belt clip. There's no doubt

this has detracted from the over all quality of the radio. I know guys that tie strings to their belt loops in fear that the little radio will unknowingly slip off. This new clip has a firm, quality spring and two 90` bends at the tip for added security. It won't come off unless you want it to.

I have for sale commercial quality spring action belt clips for the VX-1

micro ht's. They have a factory fit look and are very durable.

$12.50 plus $1.50 shipping.

please email me for ordering information

(pictures upon request)

Somewhere I read that the low ALC deflection is normal. I know that mine are low without compression, but I get good audio reports -- with and without compression.

There ws a message last year to the effect that this phenomenon has to do with how they've distributed the gain in the output stages, or some such.

The only valid way to test would be to measure power out on voice peaks. If it is 100 watts, you are getting good audio level, whatever the ALC says. But you would need an instantaneous reading (e.g., calibrated scope with RF probe with rig feeding a 50 ohm dummy load) vs. an MFJ or other type of mechanical meter.

The test data in the Jan(?) 98 QST indicated the radio delivers according to specs.

While the Ten-Tec Scout doesn't meet every requirement you listed, in many
areas it matches up very well. OK, so the Ten-Tec Scout may not be the
#1 HF radio out ther (or #2, #3, ...) BUT, there are Hams out there who
have purchased the rig, use it and love it.

So, I can't agree with your comment that if such a radio existed,
"... today's ham would never buy it." However, if the wording
was, " most of today's hams would never buy it."; I'd agree.

Low cost microprocessors make it easy and cheap to add all sorts of
complex features to a radio. However, I'll bet that most of the
Hams out there never use (or need) all of those complex features
that are put in a radio and few ever figure out those features anyway.

73,

Bob KF6JHG

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner,alt.radio.scanner

Please make an offer for this item, I have no idea what its worth:

Its in mint cosmetic condition; however, operational condition is unknown. Sorry, no box, no manual. It requires a 13.8 VDC power source which is not included. It did power up when I put a power supply on it. I purchased this at an estatee sale with a box of other electronics stuff. I am not a ham, and therefore have no need for this.

The unit is all metal, approx 4" X 6" X 1"
A tag on the bottom of it says "rated input 10W"
The front of it has an "on-air" led, and three push buttons:

1. Mode - SSB/FM
2. RX - On/Off
3. TX - On/Off

I would be interested in trading this for a basic hand held scanner. Please let me know brand and model # on your scanner for trade. If necessary, I will add money to even up the trade.

Amen on your comments about Icom. I too have suffered at the hands of this once great company. Once upon a time they made a great handheld, the old 32AT from the latter 1980s. You could use all of the accessories from the IC-0x series on it, including the charger for the batteries and the speaker mike. It was a truly fine radio and the best handheld I have ever had. But the latest purchase of one of their products has proven to be disasterous. The IC-738 has been awful. Bought it new in Feb. 1995, and since August 95 it has been broken more than it has worked. Sorry radio, truly poor in its performance, or in this case, lack thereof. Another friend here bought the IC 281 and it has been even more of a piece of junk than my 738. He sent it in at least four times under warranty, no good, still suffers from the same problems. And as for using it on 9600 baud packet, forget it. Doesn't work. As for my 738, it is once again broken. I have learned my lesson. My next hf rig will either be an old Kenwood TS430 or one of the newer Yaesu models, as I surely will not ever purchase another Icom product. Yaesu and Kenwood are killing them with better quality products, and yes, they do not care one little bit about us in the amateur market. So remember that all of you people out there when you go to purchase your next and/or your first new or used radio. Stay away from the I line!

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,oh.forsale,us.forsale.misc,us.forsale.d,misc.misc,us.misc

For Sale

GE Master II radios 144 to 160 Mhz.

Some have PL encode/decode 100.0/146.2

50 Watt transmit .5 uv or better receive. (ALL WILL BE CHECKED BEFORE

THEY LEAVE HERE THERE WILL BE NO DUDS).

Some may come tuned in the ham band as I have done this to a few to make

shure they work well there.

Currently on Goverment frequencies but tune to 2 meter ham verry easy.

Each package contains:

One radio.

One control cable.

One control head 8 channel.

One microphone.

One speaker.

One transmit/One recive ICOM without crystals.

One PL incode/decode board and hook switch as available.

If you buy 5 or more (limit 25 as that is all I have) you

will receive a compleat service manual.

The cost is 75 dollars plus shipping FIRM!

Crystals can be installed for one frequency tx/rx for 40 dollars.

You are responsible for any additional ICOMs and crystals as there

are not enough to do more. If you order the one channel installed

you must wait 4 to 6 weeks for me to order the crystals from my supplier

and them to ship them to me. The time can be shorter but the

supplier raises the price to me and I to you.

If you want to order your own crystals and install them your self

you can order them for 10 dollars each (20 dollars a pair 1 tx / 1 rx)

from:

Hy-Q International

1438 Cox Ave.

Erlanger KY. 41018

606-283-5000

COD or money orders only no credit.

DO NOT buy JAN or BOMAR crystals as they are shipped off frequency

and usualy fail within 6 months.

Any repeater mods you want are up to you to do.

All orders and shipping are to be handled through Rich KA8CMK at Big_Red_One@Juno.com

way he want's to do it.

Thank you for your time

Wayne L. Anderson

I own three FT 8100s and they are great radios. Not a problem with any of them. I purchased them each seperately so they represent three different age radios and I have two of them in severe service (lots of dust and vibration) without a single problem. I really like this radio and think you will be very happy with it.

Hi folks,
Just got my tech+ ticket, and I'm seriuosly considering a Yaesu FT50-RD for purchase. (5-WATT) Does anyone know if the FT50-RD is any different from the FT-50R, and if so, how? Can the FT50-RD be modified (xtended TX, via solder jumper) the same way as the FT50-R? Any opinions, good, bad, whatever? Is this a better HT than Alinco's new DJ-G5TH? Any opinions on Alinco's DJ-G5TH, would it be as tough as the FT-50RD?
Thanks for any help,
Paul KF4VYZ

If the latter were true, you'd be able to resolve any problems yourself.
That you've had to return the radios to the "incompetent" Icom techs
means that you are yourself even more incompetent.

The reality is that all equipment suffers from infant mortality problems,
and every manufacturer makes design errors from time to time. These
should be expected. A radio amateur should be able to resolve any of
them.

If you want to blast Icom (and other radio manufacturers), blast them
for failing to include service information with the product. This, to me,
has been the gravest fault of all. The IC706 shipped without even a
schematic diagram. That's intolerable in a product intended for the
amateur radio market.

Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

• Motorola VHF Remote Model: PA8270J SER.NO: 8697. It is a tube type remote control unit used to control a base station over a two wire dc circuit. There is also a tone Signal and intercom control on front below speaker. $75

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't know about transmit. Not able to test. Looks are 7/10. As is $100.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $3.50 each. Special discount price for all.

• AR Inc.- Stereo Amp, all solid state. $100

3144. IC-706MKII possible quirks

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-02 00:00:00 UTC
From: ev1960@hotmail.com
Message-ID: <6defrndgf1@nnrp1.dejanews.com>
Source record: 151814

Hi All,

Got my new IC-706MKII last week and I think I have found some quirks.

Mike Gain seems inadaquate. On 6M FM Compression does not work which may be inherent with the radio but I get low audio reports with the mike gain set to 10 on 6Meters. I think it sould be distoring on the setting of 10. 2M FM my audio seems to be OK but again on a setting of 10 I think it should be overdriven and distorted.

My AGC only toggles to F-AGC and not AGC. It seems the slow AGC setting can't be set on the radio as described in the manual.

Have you experienced the same things? Any suggestions on misteaks I am making on settings? Should I be sending this radio back to ICOM?

Thanks es

My dad's Citroen BX (Ford Escort class) 1.7 litre diesel was
quite respectable at 0-60mph in 10-11 seconds, admittedly it
had a turbo compressor, but most diesels have nowadays.

I would like to add that it might be a problem with one of its many fine radios but there is for sure a problem with the " factory repair" . My friend has just sent his 735 to the factory for calibration and any thing that needed fixing. It was received back needing alignment. It had to be re-calibrated for off freq in Road town ,Tortola. The radio was in far worse shape after being factory calibrated. He now knows the true meening of if it aint broke dont fix it.

Ray

I have had only good luck from new ICOM's.

Why only bash ICOM? All Japanese companies forget their customers after the sale. Try to get a Yaesu 101 or a Kenwood 820 fixed or buy parts from the factory. All Jap radios are considered "obsolete junk" after 5-10 years. Buy Tentec. Buy Drake. Yes, even buy MFJ. Then you'll have customer support. However, you won't have all that useless shit on your radio that all hams "need" - you won't have a built in power supply. You won't have one of those goddamn whirring auto tuners that can't tune a dipole cut for 80M fed with 450 ohm line. You won't have CW performance, but that doesn't matter today.
I hope an American company will come out with a 50-100 watt HF radio with ONE VFO (yes, I mean VFO), five or six knobs, kick-ass QSK, SYNTHESIZED HFO (!!!) for 1.8-30 mhz coverage (oops, I forgot about type acceptance -- brought on by the goddamn CBers) crystal-mixed low second IF with Collins (!) mechanical filter. You know, this radio could be built and sold for well under $1000 -- IF THEY WOULD LEAVE OUT ALL THE OTHER JUNK!!

But of course, today's ham would never buy it. (even those who have a clue what I'm describing) So be it. I'll die before my Collins and Drake and TENTEC stuff......not to worry.

Thanks and 73 (I think) Walt WB5LJW

Well, while my feelings about Icom aren't as strong as the original poster, I must say that I don't like Icom equipment. What I have owned worked OK, but I just don't like the WAY it works; the way the options work.

I much prefer Kenwood and Yaesu.

Bob

I agree with the group. I purchased a ICOM IC-2000H because of the
advertising Intermod resistent. It is the worst radio for intermod or
front end overload I have ever seen. I compared my IC-2000H to two other
guys side by side (apples and apples). Basically the entire 2 mtr ham
band gets wiped out in areas of Boston, MA.
The Kewood,ADI,Yaesu are MUCH better!!
I wish Icom would say: WIDE BAND RECIEVE but stop saying "INTERMOD
RESISTENT!

> 73's steve Hershman NS1R

Hi Steve,
I have one that is about three months old and I have not had any problems with it. I take it to a secondary QTH once a week and it transports fine.

So far no problems with the Battery backup.

The manual comes with an addendum that says that the antenna tuner should not be used with any antenna having a higher than 3:1 swr. I haven't had any problems with it at home. At the secondary QTH I use 300 ohm feed line so I use an external tuner which is a cheap and easy method.

I plan to take mine camping but will use an external tuner with it. Most autotuners in modern HF rigs have too limited of a matching range.

>sale. Try to get a Yaesu 101 or a Kenwood 820 fixed or buy parts from the
>factory. All Jap radios are considered "obsolete junk" after 5-10 years.

This is true. I bought an HTX-202 (radio shack 2m HT if you don't know) not because of features which it lacks (although it does have the basic necessities which is nice) but because I can drop it, throw it, kick it, and knock it off a tower and pick it up and still use it. And if I can't, the schematics are easy to come by to fix the thing, or I can always find a radio shack to fix it for me, even if everything else they make sucks. Plus it only cost me $150 NEW (on sale albeit, but still...) - try and get a new Icom for the much $$, I dare ya! :) Not to be totally biased, I am buying a Ken 742A simply because it's the only mobile tri-bander I can find that covers 2m, 440 and 1.2GHz, not because I want to.

>Buy Tentec. Buy Drake. Yes, even buy MFJ. Then you'll have customer
>support. However, you won't have all that useless shit on your radio that
>all hams "need"

I'm curious how many hams out there actually use all that crap. Personally I think it just makes the radio a hell of a lot harder to use, and for 99.9% of whoever you'll be talking to you just need a transmitter+receiver, probably freq offset if you're using a repeater, and CTCSS+DTMF tones. Your voice will still sound the same... (Well, a morse keyer if you do that too but that's easy to add.)

>I hope an American company will come out with a 50-100 watt HF radio
...etc...
>be built and sold for well under $1000 -- IF THEY WOULD LEAVE
>OUT ALL THE OTHER JUNK!!

Well, while I do not hang out on the HF bands (still no-code license here) I do work for a communications company (paging) doing engineering work, and I see no reason why what you've described couldn't be accomplished. So why don't you build one?

>But of course, today's ham would never buy it.

Oh, you'd be surprised... I think a company that made high-quality radios at a reasonable cost that had what a ham NEEDED would make a killing. You wouldn't even need instant 24-hour customer service, provided someone could send in a broken radio and have it fixed the first time, quickly enough that they could get it back before hell froze over! I've considered building my own radios just so I could fix them when they broke and not have to deal with shitty

customer service, but I just don't have the time to build one that does what I want...

3159. Re: thoughts/opinions on Yaesu FT-50RD

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-02 00:00:00 UTC
From: Scott Gray <comm5@pacbell.net>
Message-ID: <34FAF53C.D09EC158@pacbell.net>
Source record: 151829

Paul,

The difference between the "R" and the "RD" is that the optional FTT-12 keypad is standard equipment on the "RD". The "R" does NOT include PL (CTCSS) Decode or the optional (and pretty useless) Digital Voice recorder option. My personal experience with the FT-50 RD requires the CTCSS (PL) tone decode for monitoring specific commercial and amateur frequencies due to several transmitters on the same frequency. IMHO I would recommend getting the RD as most stores have them available at competitive prices with "coupons" available. Street price is about $319 US from AES for a full FT50RD 5 watt. If you bought a FT50R, then later decided that the CTCSS decode option would enhance your monitoring of commercial service radio transmissions, the upgrade of the FTT-12 keypad would cost you considerably more than just going for the RD version.

Regarding desoldering "Pad #1" for enhanced frequency coverage; both units are identical.

As for the physical ruggedness, I can tell you that the my Yaesu FT-50 has held up extremely well with over 1.5 years of outdoor daily use relating to my work as a radio tech. The unit has been dropped directly onto concrete, into deep snow, and exposed to pretty heavy rainfall without any electrical failure. I did manage to break off the battery clip on a W&W after-market battery one day. No harm was done to the radio, but a small 'nick" was observed on the battery pack after the entire unit bounced off a nearby rock.

The Alinco DJ-G5TH is a "innovative" unit with many features, but does not even compare to the Yaesu FT-50 series in physical ruggedness and durability.

One more VERY (IMHO) important item is that the Yaesu FT50 series is the receive audio is LOUD and robust. A feature long lost in Amateur Radio portables for some time!

IMHO, the FT-50RD is the best choice over many other current model Portables. The FT50-RD does NOT receive two frequencies simultaneously as some of its competitors. It does have a "dual-watch" feature to scan to a second frequency or band at a useable interval. I only use one at a time anyway.

Just my 2 cents. I don't work for any of the companies mentioned above and have no affiliation other than just FINALLY getting a good portable at a very reasonable price.

For Sale: Hewlett Packard model 435B rf/microwave power meter. Precision (1%) analog rf power meter measures power from -65 dBm to +44 dBm at frequencies between 100 kHz and 110 GHz, depending on the HP8480 series power sensor (not included). Has internal 50 MHz power reference (with N-type output connector on front panel) that produces 1.00 mW (0 dBm), plus or minus 0.7%, traceable to NIST standards. This is a beautiful instrument in excellent operational condition, recently checked with a calibrated power sensor. Listed in the 1996 HP catalog for $2200. Unit comes with power cord and a photocopied manual for the very similar 435A, ready to use with your HP8480 series power sensor and power sensor cable. Sorry, no power sensors or cables are available. This HP 435B is $138.00 shipped via insured USPS 2nd day Priority Mail anywhere in the continental U.S.A., upon receipt of your US postal money order or bank draft. Contact Rick at remler@LL.mit.edu

This certainly isn't true of the FT-101. Parts are readily available,
in stock (I inquired about a DC power cable last week), and Yaesu is
perfectly willing to work on your 101; of course, it may cost more than
the unit is worth, and with basic test equipment, the 101 is easy to
work on yourself.

A year ago Kenwood had mods and service info online (via a faxback
system, if I remember correctly) for my old TS-700 2m rig,
and the service manual is "orderable" (last time I checked.)

> By the way that radio is worth $185. C Thomas

Depends on condition and the purpose you are buying it for.

As a communications receiver for modern amateur use, it is essentially useless. Without additional outboard converters it can not be used for anything other than CW and AM.

If you are an afficianado (sp?)or collector of "ye olde heavy radios", and assuming it is in reasonably good working condition and complete (both meters, original knobs, top and bottom covers), then it would be worth that price.

To: the group that reads this reflector:
Yesterday, I posted a problem that I had, reference an Icom 735. It was a strange problem, that the receiver (and transmitter) had gaps in it. The receiver just went dead, but strangely at points every 100Khz.
I had a few responses, even from one tech at ICOM!!. (FYI, his address bounced back.)
Clif had the time to send me two e-mails, with what he thought was the problem, and the second, the fix.
I can tell all of you that he was right on, and my trusty 735 is now back on the air, as the exciter for my transverters.
Clif is a good guy to deal with. FYI, this is his business, not just a side line.

Check out the antenna connector. They tend to fracture, internally,
and the resulting high SWR will cause the results that you mention in
your post.

If it is the antenna, repairing/replacing it it fairly easy. Just be a little more careful
about straining the BNC in the future. :-)

Realize that a zillion memories are essentially free. RAM is cheap, and adding memories only requires a few lines of firmware. What costs good money is a durable analog RF design with adequately sized components, robust signal handling, good filtering, and good heatsinking. We don't see a lot of that today. Pournelle's Law says silicon is cheap, iron is expensive. Most of today's radios are heavy on the silicon and light on the iron, because that's the cheapest way to build a radio that'll sell for a premium price.

Yes, it is the "rework" of the QRP+/++. Initially, the SGC rig
caused a lot of interest with the QRP crowd. However, the ever-increasing
current consumption and ever-lengthening ship dates are causing it to
rapidly lose any market that it may have, especially with rigs like
the Elecraft K2 slated for release, soon.

>I thought this radio was subpar and overpriced when Index Labs offered
>it, and it still appears subpar and overpriced after SGC has reworked it.

Yup. You've got to love it when the battery pack costs more than the
rig. Not too much more money, and you're in the range of a used 706 with
better performance and more useful features.

The products, support, warranty service, replacement parts pricing, quality and quality control at IBOM America has gone down the toilet.

The management are yuppie scum. They forget about the customer that made iBOM what it is today. It is unfortunate that I have spent so much hard earned cash on iBOM products that do not work. Have been to the incompetent technical staff at iBOM America and returned repeated times with the same problems.

Stories to follow. Just venting now, to get the word out. i know there are probably many satisfied iBOM customers out there but I have an extensive collection. I also am a great deal fussier and more knowledgeable that the average amateur.

DON'T BUY iBOM!!!!!

3186. Re RS-232 interface for JRC receiver, Model NRD-525

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-03 00:00:00 UTC
From: P.Dalliessi@clear.net.nz
Message-ID: <34fc9821.8149557@news.clear.net.nz>
Source record: 151593

Good morning to all. I recently purchased a second hand
NRD-525 receiver, that came with the RS232 computer interface option
installed. My problem is that the cable to the computer was not
available, and I wish to make up my own. Does anyone have the special
12pin plug that fits the socket on the interface board, and does
anyone know the pin out connections for this socket? Unfortunately
this information is not in the workshop manual, plus the 525 is now 6
years old and the 12pin plug seems impossible to obtain, at least here
in New Zealand.

Is there anyone out there who may be able to help me, please?

My email Addres is:
P.Dalliessi@clear.net.nz

Thanks in advance for any information.

3187. TS-940: VBT mod, amp keying problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-03 00:00:00 UTC
From: Robert Brandon <rbrandon@nospam.austin.ibm.com>
Message-ID: <01bd46ff$b0027dc0$8d52e020@rbrandon>
Source record: 151594

My TS-940 has a couple of problems. The first is with the VBT. I have both 500 hz filters installed, and when I push the VBT back past 12 o'clock or so, the signal strength goes way down. I read about a mod that adds an additional adjustment circuit to take care of this. I'd like to hear comments on how effective this is before I dive into it.

The other problem is that there is an intermittent problem keying an amplifier. Has anyone else had this problem? Thanks. Remove the nospam in the address to reply.

While I totally disagree with this disagreeable fellow ICOMSUX or whatever he calls himself, you have to admit that a schematic for the 706 -- other than being an interesting artifact to admire while contemplating the wise use of ones spent ham radio dollars and the wonders of the innards of the really cool box in front of you on the table -- is pretty near a useless item.

Now a schematic for an R-390A is something you can actually put to use .... but that's another thread altogether :-)

To those of you that tried to reply to my previous message, please forgive me... I must have been up too late as I didn't even give you my right email address which is now noted at the bottom of this message.

As they say, talk's cheap - it takes money to buy whiskey. I'm fed up with getting jammed, the inconsiderate people on the air, etc. I'm giving up on the hobby. To those of you that I've talked with over the years, I had a good time and thank you for the many hours of pleasure that I had talking with you all. To those jerks out there that make life miserable on the bands for the rest of us, screw you. I just don't enjoy the jerks on the air anymore. My frustration is your gain. I'm going to sell everything but the kitchen sink. :-) My wife will be thrilled, I'm sure! Mint condition/low hours on the Kenwood gear.

No mods on any of this stuff - all original factory specs. I bought the stuff new and am not a hardware tech guy. I purchased most of it over the last 3-4 years, as I like to stay current with technology.

Kenwood TS450S/AT HF Tranceiver w/autotuner
Kenwood IF232C (RS232 converter for the 450)
Kenwood TM251A 2mtr (great for 9600 baud packet)
Kantronics KPC9612 9600 baud TNC
Astron RS-35M power supply
AEA PK-232MBX multimode controller w/pactor
Timewave DSP-9 Digital Signal Processor (Had one ROM upgrade to "+")
MFJ 1272BX Microphone/TNC Switch for PK232 + PTT footswitch
Heil HC-5 Headset/Mic (Good condition, but not mint. You'll want new earpads!)
Bencher 190-20 Low Pass Filter

Alas, there is ONE piece that wasn't bought new... an old but trusty Heathkit SB200 amp with good 572B's in it. The relay is sticking a bit, but otherwise, it's clean. Someone that seriously wants to use it alot will want to put in a new relay. I had it refurbed around 50 operating hours or so ago, but did not have new tubes put in as they still are functioning beautifully. The exterior has some minor scratches - no dents. Meter has a small crack approx 1/2" long in the plastic cover, but works just fine. My neighbors will vouch that this thing packs alot of juice by the opening and closing of nearby garage door openers when I crank it up. Hehehehe... Seriously, it works fine, you'll just want to work on that little relay switch.

PC Pakratt Software
Log Windows Software

Cables, misc connectors, boxes of misc trinkets I picked up at hamfests, etc. I'm sure there's some pieces I'm forgetting about, but frankly...I don't give a rip. Someone will make out like a bandit. If it's hooked up to my radio equipment or in my part boxes, you'll get it all. (other than my computer equipment, of course!) Heh, I just remembered, I've got a little RS HTX202 2mtr handheld I'll throw in there too. See what I mean...I don't give a rip. I just want to dump it all and be done with everything to do with amateur radio. Some lucky #^@%@ is going to be bragging to his buddies about this deal.

Shipping to continental US only - sorry - just too many hassles to get stuff overseas - this is going to take several large boxes.

I'll give it away for $1500 plus shipping, professional packing, and insurance. I've got the original boxes and stuff for most of the things and will have everything professionally packed in secondary containers. We're talking about quite a bit of stuff here folks, be prepared. It's may take $150 to ship all of this stuff because I don't want to deal with packing it correctly - I'd rather pay a professional to do it. That amp and power supply are kind of hefty. :-) Package deal only - I don't want to deal with shipping all of these items to different people. I want to get it over and done with.

P.S. If you're local, can you help me take my R-5 off the roof? You can have it! :-)

I have one IC-2350 dual band mobile in excellent condition complete with manuals and box. This unit has been used as a base mounted to a power supply, it has never seen mobile use. I'm asking $350 shipped and insured to the lower 48, shipped upon receipt of money order or cashiers check. Please reply via E-Mail to peaster@connors.cc.ok.us

Thanks & 73's

As soon as you hook an antenna to the rig, none of those figures mean much of anything in the HF spectrum below 30 MHz. They're all essentially equal for all intents and purposes. What matters is that you're using a receiver whose sound you like, whose features you like, and which has a good set of IF filters in the bandwidths you want.

For SWL'ing, you could do a lot worse than an R-390, especially considering that some of the newer, cheaper rigs are so full of synthesizer noise that the sensitivity specs are applicable only if there are no other signals in the band.

Once you get into the VHF spectrum, it's easy to make the case in favor of solid-state receiver technology. But receiver sensitivity on the HF bands was a solved problem 30 years ago, largely thanks to the excellent engineering that went into "boatanchors" like the R390.

I have a TS-140 and it has been a great radio. I ve used it for a year

and its worked great. Now when I connect the antenna and i insert

the center pin into the chassi mount it receives great BUT when

the sleeve touches the ground of the chassi mount, it looses all of

the receive. It does this on all three diffrent antennas with all
diffrent coax. Thanks for any help 73 de KF4MVS steve

Kenwood fixed mine gratis after I complained to them at Dayton. It's worked without a problem ever since; about three years.

I believe the problem is a plug that connects from one of the circuit boards to the display. I believe I was advised to merely clean it with contact cleaner. Try it; it might be the easy, cheaper way out.

YES.

Is a known problem. I have it; others have it.

Unfortunately, there is NO gain adjustment in the radio (so far as I know) for the PL.

Fortunately (for me) I don't use it on FM, since I have a Kenwood tri-band FM radio in the car.

Will there ever be a factory fix? I have my doubts, since (I know) this has been an issue since July 1997.

BUT ... best SSB mobile I've ever owned.

3219. Old HF Transceivers with 11m TX/RX?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-03 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <6dfjphbto7@coranto.ucs.mun.ca>
Source record: 151652

I am courious about what older transceivers had the 11m band
before it was given to the CBers? I believe the band was given
in the late fifties but was told that some Yaesu FT-101's
had the 11m band in the late 1960's early 70's. I know most
HF transceivers now have general coverage RX and not interested
in hearing about them.

Could someone post a list of radios known to have either
11m RX or TX/RX?

The radios I know of are:

Yaesu FT101 (not sure what model but I think it was FT101B)
Siltronix 1011

Please add to the list.

3220. Re: FT8100R-any good?

From: me <kimo9@idt.net>
Message-ID: <01bd4656$7bc3c040$0f1871ce@me>
Source record: 151653

ive had my 8100 for little over a month. sad to say though, i sent it back
to yaesu for repair last friday.
but, i want to add that the problems were my fault. when i bought the
radio, the sales-man at hro told me to either leave it in the house or
permanantly mount it in the car. well, i was taking it in and out. what
started out as a simple blown diode in the protection circuit, turned into
a completely dead radio after me and a couple so called "experienced hams"
got done.
i would recomend the radio highly. the recieve is great. the other
features worked to my liking.
p.s. i also have an alinco dr610, and its a tough choise which would be my
favorite.
don

Source record: 151654

I have used the auto-record (F) then (R) used another handheld to send my voice ID and a two digit DTMF tone to tell the repeater to announce the time. You could use this feature and have up to twenty seconds of dtmf to send. Just push the ptt and the tap the knob down. It will transmit voice id and whatever dtmf tones it previously recorded off the air from the other ht.

If you followed my disjointed description above I believe this will solve your problem. Record all sounds needed in the voice recorder.

>11m RX or TX/RX?
>
>The radios I know of are:
>
>Yaesu FT101 (not sure what model but I think it was FT101B)
>Siltronix 1011

The Siltronix was made by Swan, in an effort to stay afloat by pandering to CB at a time when they were going broke because the ham market was going to the Japanese(better equipment, lower prices).

As for transceivers, this was a time before the transceiver became the standard. Most everyone was using seperate receivers and transmitters: made it cheaper to improve your station by adding a better receiver. And CW and AM xmtrs were fairly easy to homebrew.

As for what rigs operated on 11m, look at QST during this era. You'll find Heathkit DX-100, Globe Kings, HT-32(and older), Collins 32V- series, etc.

There is a very good web page devoted to the FT50 series. Here is the
url: http://members.aol.com/aeimn/ft50/index.htm

There is a wealth of info there. I have a FT50RD and am very happy
with it. There are only three minor disappointments: 1) As the
gentleman mentioned, you cannot receive 2 freqs at once, but I have
not found this to be a problem; 2) there is no "priority" channel
function; and 3) the antenna leaves some to be desired. There are a
number of aftermarket replacements to choose from, however. All in
all, I think it's the best dual-bander on the market. 73's

Cross-posted to: ba.forsale,rec.radio.amateur.equipment

The following test equipment is up for grabs at $200 for the
whole lot (you must take it *all*, though, and pick it up in
North Petaluma this week Im moving). I bought it when a
business closed down, and all is untested. As most came out of
service, I expect most work fine. A used test equipment company
in the East Bay quoted me around $500 for several of the microwave
pieces assuming they work --, but I dont have the time to
deliver to them. If you have the time, Metric may buy some
of the gear from you.

Questions? I can be reached during the day at (707) 795-1527.

Cheers,
Alan
WD6DES

Make Model Description
---- ----- -----------
Combined as one unit, the following spectrum analyzer is in
excellent physical condition, but has no horizontal sweep. I
have the service manuals for this unit, but have not had the
time to look into it. Decent general purpose spectrum analyzer.
HP 182T Oscilloscope mainframe
HP 8557A Spectrum analyzer plug-in, .01-350MHz

Combined as one unit:
HP 1900A Pulse generator mainframe
HP 1905A Rate generator plug-in, 25MHz
HP 1925A Word generator plug-in, 50MHz
HP 1917A Variable transition time output plug-in, 25MHz

Individual components and instruments.
HP 4800A Vector impedance meter (*very* nice piece)
Sorensen SRL10-100 Power supply, 0-10V, 0-100A, metered (heavy!)
HP 11720A Pulse modulator, 2-18GHz
HP 5255A Frequency converter plug-in, 3-12.4GHz
HP 8556A Spectrum analyzer plug-in, 0-300KHz
HP 17400A Hi-gain preamp plug-in
HP 536A Frequency meter, 0.94-4.2GHz
HP 8495B Attenuator, DC-18GHz, 0-70dB
HP 85025B Detector, 0.01-26.5GHz
HP 11664A Detector
HP 11664A Detector
Alfred 1001 Detector, crystal

Maybe its only a coincidence, but I have owned all of the major three brands of Japanese radios, and I have had more problems and repairs with the Icom equipment than the others.

In one case,the R7000; I think they rushed it out to market before discovering it had problems in some areas. Then they came out with a new version without the flaws; the R7100.

I can't believe Hans does not know how to receive an SSB signal with an R-390 with out the outboard SSB adapter. Maybe he was trying to run the price down by saying that.

I once talked myself out of a free R-390. It had found it's way into the Ham community here somehow, maybe through the Mars system. Anyway the Ham who had it at the time told me I could have it. He did not want it because it would not receive SSB. When I showed him how to do it he changed his mind.

Thank you for reading this.

I am looking for suppliers of lightweight CW straight keys. I travel alot and am going to bring an HF 40 M with me. I really like straight keys, but the standards (vibroplex etc) weigh a ton (actually about 4 lbs--more than the radio).

The key I need could be quickly assembled without use of a drill press, band saw -because I dont have a workshop outside of a drill and soldering equipment.

Any help appreciated.

Has anyone looked at the JRC radio's. I have had no problems with them
and after having used Yaesu and Kenwood radio's I find the JRC is much
better built! In my opinion all the newer ham HF radio's producted with
DSP by Icom, Yaesu and Kenwood have lousy quality control and cheep
hardware. I've opened my JRC JST-245 and found every part labeled made
in Japan, Every Part! Not Korea or Taiwan or China or Vietnam. I still
think Japan can build a good product as long as they don't contract out
to some second world country.

I thought the ADI-146 was a Kenwood Clone of the TH-241A.
I have zero intermode on the ADI and I had to sell the Icom IC-2000H
because it was terrible with intermode.

You may be eggagerating just a bit. The R390 may be better than
a $49.95 DAK Chinese import, unless you need to take it portable
on batteries. But in general you're right, the R390 just isn't up to
the levels of performance available from modern receivers. It
was a great receiver for its day, but its day was 30 years ago.

>some point we need to make them understand that we are the ones with the
>cash.

Apparently you don't mind being being "done" - why else would anyone
buy 4 radios from the same manufacturer after having so much trouble?

You have trouble with a $2800 rig so you go buy a $450 rig and have
trouble with it, and then you go buy TWO $350 rigs!! Yaesu is making
a killing off of you, plus they're seeing their products sell and they
think they're doing great in the market.

If you're really that dead set against Yaesu, stop buying their
stuff!! If enough people have experiences like you and stop buying
their products, they'll either get the clue or go out of business.

> by saying that.

Well, you can certainly receive FM via slope tuning, or ride the RF gain
control to use the BFO for SSB, but the result will be inferior to what
you get from a receiver that has a discriminator and product detector.
Using the proper circuits works better. And there are modern receivers
with much better IP3 than the old R390, and much lower noise temperatures
too.

I agree with Hans that, to a collector of heavy iron, the R390 has considerable
value. But someone looking for a high quality receiver can do much better by
looking at a more modern radio. And I say that having owned and operated
a R390 in the "old" days. Put it beside a good modern receiver and the
difference is often astonishing. The R390 was about the best there was
in its day, but its day was a long long time ago. I think you guys need to
use one for a week side by side with a late model receiver in order to

refresh your memories. I stayed with tube equipment for a long time after solid state equipment came out because the early solid state equipment wasn't very good. But that's changed. Any recent solid state receiver can eat the old tube receivers' lunch. And they're smaller, lighter, and consume much less power.

> 73,

I can't remember the name of the company that makes the filters. I'm at work so I can't easily look. But they cost about $90 with shipping and all and they work! I live down the hill from a mountain site with pagers, mobile phones, and commercial radio of all types. My 241A in the car was not bothered but my Alnico I use as a packet station and base radio was.
I put one of these filters in line and put it above the suspended ceiling in the shack a year ago and all--all the inter mod, fundamental overload or what ever is gone. The company was a pleasure to deal with and it worked. The main reason I can't remember their name is it's been so good I haven't needed to even think about it. In fact our local club was helping our volunteer fire dept. with an interference problem. I

could hear the interference weakly in my basement with my wide coverage handheld so I hooked up to the base antenna and I heard nothing! It took me about 30 minuets to remember the filter above the ceiling. They advertise in QST and Amateur Electronics Supply carries them. They will cure the problem. By the way they have no adjustments and require no power. I would strongly recommend not even thinking about opening one.

Power settings in 2m side and HF side are independent. While in VFO at
2meter frequency or a 2 meter memory channel set your power, then whenever
you are at any 2 meter VFO or memory channel your output remains low.
Switch to a HF channel or VFO and the power level you set will be
independent of the 2 meter level.

Process: (on original 706, probably same for MkII)
(1) switch to 2 meters.
(2) Press and hold DISP button until setting menu comes up.
(3) Press up or down channel change buttons until settings show power
out setting.
(4) Turn the setting knob (big frequency change knob) until desired
power output shows.
(5) Press DISP button again to save setting and exit.

Source record: 151701

Hello,

I have for sale a DX-100 and HQ-170. These items were purchased and I have not had time to get to them, so I hope someone can use them.

DX-100 - Good shape, original cabinet repainted, but no extra holes. It looks like there are two non original knobs and one no original togle switch, no extra holes in the panel. Electrically untested as had no time to bring it up on a variac...
$125 - prefer chicago area deal as 100# +
HQ-170
It plays.... A couple on non original knobs, no extra holes in cabinet or panel. no clock. The chassis has a little bite so would need some minor TLC.
$160 - plus shipping from 60067.

Thanks
Mark

I am a complete newbie to SWL---could someone please recommend the basic setup I would need to get started? Do I need an anntena (sp), receiver? Is it possible for me to broadcast? Would I just need a transmitter and a mike? Any advice would be greatly appreciated. --

3274. WTB: Yaesu acc for FT-757GX

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-03 00:00:00 UTC
From: Michael Carter <ka8uvi@softerror.com>
Message-ID: <34FC542A.494E@softerror.com>
Source record: 151707

Hello all.

I'm looking to buy the following station accessories for my
new, used FT-757GX:

FP-757HD: Heavy-duty 20-A power supply
FTV-700: Monoband V/UHF XVTR
FTV-6M: 6M adapter for above
FTV-2M: 2M adapter for above
FTV-70CM: 70CM adapter for above
FIF-232C: CAT interface, serial
MD-1B8: Yaesu standard desk mic
SP-102P: External speaker with patch

If you are selling any of the above items, please email me
with pricing and condition.

Thanks and 73...

Mike Carter

3280. Help with SM-230 and TS950SD RTTY

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-03 00:00:00 UTC
From: manous@aol.com
Message-ID: <19980303193500.OAA06761@ladder02.news.aol.com>
Source record: 151713

Trying to get my sm-230 to show rtty signal. The manual shows the x-in and y-in on the scope comming off a "Terminal Unit" and the phone patch out on the TS-950 going into the "terminal unit". What is this terminal unit and why can't I get the scope to show the pattern? Can't I just go from the TS-950 to the scope direct?

Any help would be appreciated.
New to this

John

Why would anyone do this to save $60 on an 706MkII. HRO has them at
$1,189 in stock and when you walk in the door it sure saves on the
shipping.

Maybe. The ICOM 706 Mk II's microphone is intended for mobile use,
with wind and road noise. To make the microphone work properly you
have to hold it approximately 1 cm from your lips. My on-air testing
with friends shows that if my moustache is just brushing the plastic
microphone housing, my 706 Mk II delivers great audio with the stock
microphone and the mic gain set at the factory default of 5.

Yup- ACC#4, feeds external AT-300. It's on page 70 of the service manual. (I suspect that port will also control an AT-50 by Kenwood, but I haven't tried it yet.)
I have given thought to automating the antenna selection and interlocking the bandswitch in the amplifier using this port. The
microprocessor in the AT-50 can be made to give a discreet signal
for each band.

3296. IC706/II Question (from service manual)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-03 00:00:00 UTC
From: Meegan and Jim Wilson <wilson@afn.org>
Message-ID: <34FC76DE.4EAB64DB@afn.org>
Source record: 151729

ICOMofiles,

The IC706 (and its sibling Mark II) apparently both suffer from the "missing-first-dot" problem which typifies the ICOM design philsophy: "Let's start generating some RF and THEN we'll worry about switching over to transmit mode".

My solution (dating back to my IC720a) has always been a special-purpose keyer that would switch the rig to transmit a dot-time or so before actually keying the transmitter. Not QSK, but not bad. (Let's ignore the power-control-by-ALC-causes-a-monster-click-on-the-first-dot problem for now!)

The problem has always been a neat connection between the keyer and the rig. In the IC720, I replaced the 2-conductor (tip/sleeve) key jack with a 3-conductor (tip/ring/sleeve) one; In the IC706, I interconnected the FSK jack tip (FSKK) to the keyer jack tip (dot-paddle/straight-key input). Then I plug my keyer into the FSK jack for CW.

In the IC706 this is ELECTRICALLY possible, because both signals are applied to the cathodes of diodes whose anodes are pulled up (through resistors) to +5V before continuing onto their respective LSI inputs. It is LOGICALLY possible, because the FSKK input is ignored when the IC706 is in CW mode, and key and paddle input is ignored in RTTY.

Well, I just figure this stuff out, and my wife goes and wins an IC706/II at the Orlando Hamcation. Now I gotta' do the same thing all over again.

I'd like to go ahead and use the radio without waiting for a service manual. Can someone who already has a service manual confirm the ELECTRICAL implications of this mod? I hate to install it only to see smoke rise from the back of the rig!!

Jim Wilson,
WA5BRB

I think, therefore I think I am.

Message-ID: <O5IpLouR9GA.284@nih2naac.prod2.compuserve.com>
Source record: 151736

Yep, check the ARRL handbook - I think 1997. Very good circuit
in there. I built it and modified it to it will talk to both
my FT-990 and with the flip of a switch it talks to my IC-706.
Easy since the interface to the two are almost identical, but
not quite - since that would make WAY to much sense. Of course,
the radios use a completely different command set so you have
to write or find software for your radio. Check the web for that.

Jeez, wouldn't you have been much better off using the money for a
FT-736R and selling the transverter! Sounds like big time overkill for 2
meters and you are even talking like fm since you talk about offsets.
Holy Cow, if you have money to blow, I will trade my FT-726R even up for
the FT1000 MP. De Rick

3310. FT-50R mods

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-04 00:00:00 UTC
From: Doug Munday <dougmunday@shaverlake.com>
Message-ID: <34FD0B02.1BD4@shaverlake.com>
Source record: 151494

I applied the software mods to my FT-50 some time ago and it worked as advertised. (I had previously made the MARS/CAP mod by unsoldering the tab.) This has allowed me to use the radio on fire department channels as I am on the local fire department.

I just recently tried this software mod on another (newer) FT-50RD, (no unsolder mod made) and have been unsuccessful. I can upload the modified .tpl file, but the radio response as if nothing was done to it...I cannot transmit outside of the ham bands. Does anyone know if Yaesu has changed the firmware or software to block this mod? I have not done the solder tab mod to this radio, do you think it is needed in order for the software mod to work?

Any help would be appreciated.

Post an ad in rec.radio.swap and this group "WTB: Tektronix 453" and
you'll get what you need (DC-60 MHz) for less than $150!

If your budget is higher you can go to the 465, 475, or 485, but all
you'll get for your trouble is higher bandwidth.

>some time but I wonder if it wouldn't make more sense to buy a 2m
>amp now and add a 70cm amp later, when the next sale comes along.

The Radio Shack amp *does* work. I bought one myself a while ago, for the same reason. The lowest power setting on the FT-50 (L1, 100 mW) is probably not sufficient to trigger the transmit switching circuit in the amp, but the other three power settings all work, giving you some control over the output power. Not a lot, though; the output power is a pretty non-linear function of input power (as you would expect with this sort of amplifier).

However, some warnings: If you want to operate on both bands, you will really want a dual-band amp eventually. To use separate 2 m and 70 cm amplifiers, you will need a duplexer between the FT-50 and the amplifiers. You will also either need two antennas, one for each band, or *another* duplexer. All this RF wiring, plus the power wiring to feed your FT-50 and two amps, will be a real mess. With a dual-band amp, at least, the RF wiring is a single path from the FT-50 to the amp to the dual-band antenna.

More generally, this isn't really a substitute for a mobile rig. Adding an RF amplifier will get you the power you need to get a solid signal into distant repeaters, but that's all.

You will probably find that when you connect your HT to a half-decent cartop antenna, it has severe unwanted signal pickup problems due to intermod. You can add various sorts of filters to attenuate the offending transmitters (usually paging transmitters), but that costs more money and space. Doing this for two bands at once is more awkward yet (the two-duplexer problem). A mobile rig should be more resistant to intermod in the first place.

Then you'll find that the built-in speaker isn't loud enough in the car. The FT-50 has a good audio amplifier, but you need an external speaker to make the most of it. It probably still won't be loud enough for use on the highway. An external speaker with amplifier will boost the 0.5 W from the FT-50 to several watts, providing enough sound for almost any conditions. But you have to run another wire from the FT-50 to the speaker, and maybe speaker power. A mobile has several watts of

audio power in the first place.

Finally, you will want to run external power to the FT-50 to avoid draining its battery. Plus you need some way of holding it where you can see it in the car, but which still lets you pick it up to operate its controls. And its display will be pretty small when it is no longer right at your face. A mobile has a larger display, and often has some sort of ability to control it from the microphone.

By the time you've added all the stuff needed to make a handheld perform reasonably close to a mobile rig, you've probably spent as much over and above the price of the handheld as it would cost you for a decent used 2m mobile, or even a basic new mobile. A dual-band mobile will cost a lot more, but making a handheld perform well on two bands will also cost more. And the handheld plus accessories will result in a mess of wiring that you'll have to deal with.

The Standard C510 seems to have a good system, judging by the ads. There is a "car box" that you install in the car. It contains an RF amp and an audio amp, plus providing connection points for DC power and the antenna. When you bring your 510 into the car, a single cable connects the handheld to the car box, carrying power, RF, and audio. But this car adapter isn't cheap either.

Spending $60 for the Radio Shack amp now isn't going to put a serious dent in your budget, so go ahead and buy it and play with it. But before you start buying expensive stuff like bandpass filters and duplexers and a dual-band amp, try looking at and pricing some used 2m mobiles.

Dave

> there. Any info would be appreciated. Thanks and 73 de Jed.n1jbc.

At one of my Radio Club meetings, several members found out that
none of the radio companies out there plan on keeping the 220 HTs
in the future product line.

The 220 band isn't as popular as 2M or 440, so it isn't worth it
to produce radios for such a limited market. As far as I know, maybe
you can still get the Standard C288A, the Standard C228 (dual bander),
and the Yaesu's FT-33R. However, not every store will have them
in stock and you may have to make a lot of phone calls. You may
want to try calling AES and HRO first.

By the way, I own the Standard C228A; I wish the speaker was a little
more powerful, but other than that, it's a great litle radio.

I know Kenwood andd the other >Japanese manufacturers are disappointed in their rig sales, but this is a >real kick in the a-- if it is true. Please e-mail me privately if you >have info.

Nothing "programmed" any more than in any other ten-year-old rig. Pacific Parts still stocks most of the parts for the 940 and there are a lot of independent shops who are very very good at keeping them going (Avvid comes to mind).

Naturally, by the time the radios are twenty years old, parts availability is going to be more of a problem, but that is just a natural manufacturing reality, not part of any sinister plot on Kenwood's part to force you to buy new equipment.

I have both a TS-940S and an ICOM IC-751A that I would dearly love to keep for the next forty years, but manufacturing reality says I'll probably be lucky to get fifteen or twenty more. No plot, just reality.

Realize that a LCD display is usually cheaper than a good analog
dial and its mechanical linkages. An embedded uP costs under $5
and replaces a lot of the glue circuitry you'd need otherwise to
control the radio. It generally makes sense to use a DDS or PLL
instead of an analog crystal mixed LO. It costs less, and it allows
you to easily upconvert to avoid the birdies that are inevitable with
a crystal mixed LO. That saves a few bucks on shielding too.

I have the following items for sale. I plan to take them to the Charlotte, NC hamfest if not sold before.

Mirage A-1015G 6 meter amp. Christmas gift this year. Upgrading to 100 watt 6 meter rig so I don't need the amp. New condition in box. Asking $325.

Kenwood TR-751A 2 meter all mode radio. 25 watts out. Comes with mobile mounting bracket, mic, manual and origional box. I am origional owner and I am a non-smoker. Asking $400.

Kenpro KR-5400 az/el rotor system. Similar to Yaesu KR-5400B but no computer interface. The elevation works fine but the azimath rotor is frozen up. Both rotors and dual control box. Asking $175.

AEA AT-300 antenna tuner. As new condition but I can't find the origional box. Asking $125.

Please reply to: lbarnett@claimsware.com

> Can you do that with the modern day receivers?

Sure, if you understand how they operate. The nice thing about modern
equipment is that whole subsystems are embedded in a single chip.
Since it is easy to determine if a subsystem has failed, your troubleshooting
is over almost before it began. You don't care which part of the chip failed,
since you have to replace the entire chip anyway. You basically troubleshoot
at the functional block diagram level.

The early Yaesu FT101 series had 11 meters.....The FT101Z & ZD do not.
The FR101 series receivers also have 11 meters.

Yep, that's exactly right. If you don't close talk this mic, and speak
up a bit, you won't fully drive the radio. This is characteristic of a
noise cancelling microphone. If you put a desk mic on it, like the
SM-6, you can easily drive the radio to distortion while sitting
back 3 feet from the mic (not something you'd want to do of
course). Naturally, every noise in the room will be picked up as
well.

I rather like the stock mic because it lets me drive with the
windows rolled down and the other party doesn't complain
about all the road noise, as they do with other mics.

3327. Eagle Sidewinder 400: 10kc jump? Tie clarifier to TX?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-04 00:00:00 UTC
From: mr_rhumba <NO_SPAMrumcd@open.org>
Message-ID: <34FD9B45.D9FCDCDC@open.org>
Source record: 151554
Cross-posted to: rec.radio.cb,rec.radio.amateur,rec.radio.amateur.equipment

I just bought one of these little jobs. Nice radio for $149, but because it is
set up in CB like "channels" it is missing some 10M Novice/Tech+ voice frequencies, namely 28.345 (the 10X club freq), 28.395, 28.445 and 28.495. Anybody know the
mod for adding a 10kc jump switch? It already has a +/-5Kc for hitting the "zeros". It is low power [12W PEP] but seems to work decent for DX so far :-)

Also any ideas on turning the Clarifier/RIT into a actual VFO? It has a course detented tuning knob that goes about 1.5kc+/-. The RIT is inside that knob and only works as recieve tuing. It would be nice if both worked together for transmit. I would guess one could try ans modify the Clarifier/RIT to go 5kc+/-, thereby making the need for a jump obsolete.

Anyway thanks for reading! 10M openings have been great lately.

Any help would be greatly appreciated! Please reply to my email address, because my usenet access is spotty. Remove NO_SPAM from my return address.

Thanks and 73!

Hello all

!!!!!!!!!!!! PLEASE NOTE THAT THE N.A.R.S.A. Rally IS ON !!!!!!!!!!!!!!!

here is the text of an email sent to me by Carl G6MEI (the secretary of NARSA)

you can find some info about the rally on my web site at

HTTP://www.g1gyc.demon.co.uk/narsa/narsa.htm

<<<<<<< SNIP <<<<<
Hi Martin.
Bits of late news.
We are ON for setting up the main room on Saturday Afternoon as the event has been moved into the ballroom. Don't know about the motel lounge for you though.
I am getting msges that people are still saying the event has been cancelled and there is a web site (which I have not got onto yet) saying this. S search for Norbreck on yahoo threw up your page + some ehbition firm details of Norbreck.
We are mentioned on the RSGB rallies calendar.
Could you please amend the home pages to say the event is definitely on contrary to false reporting and mention the overflow car park at Little Bispham and free shuttle bus.
It will be going out on the GB2RS news as well.
Presume the home pages are still intact. I could not get on today from work.
See you a week Sat/Sun.
cheers
G6MEI

>>>>>

see you all there I will be on the Bring & Buy

3342. HELP TRACKING BURROWING OWL

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-04 00:00:00 UTC
From: VE2ZTT <morisset@saglac.qc.ca>
Message-ID: <01bd47b7$4ebdf0e0$ac2513cc@204.19.37.2.saglac.qc.ca>
Source record: 151569

In order to safeguard this species, the Saskatchewan Environment
and Resource Management have equiped some owl with radio
transmitter in order to track them during their migration .One owl
was found(dead) near McAllen,Texas by the Canadian Wildlife
Service.The transmitters should be good until September 1998. It
would be very helpfull and fun to scan those frequencies in
Mexico and central United State and Canada.
If you want to help in monitoring those vhf frequencies you will
find all the informations (and frequencies to be monitored)
at this site http://www.saglac.qc.ca/~morisset/owl.htm
Gilles VE2ZTT

3343. What is a Yaesu FT101E in pristine condition worth these days?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-04 00:00:00 UTC
From: blackie@gate.net
Message-ID: <34fdce7e.38552633@news.supernews.com>
Source record: 151570

I have a fellow ham in the area that is interested in purchasing my Yaesu FT101E and I have no idea what a reasonable asking price should be. He said once I decide to let him know. I have had it since I was 14 years old. I bought it with money I earned mowing lawns and doing other odd jobs. Needless to say, since I had to work hard for it, I took very good care of it. There are no scratches, and no dust on the inside as I always kept it covered when not in use. It even has the origional plastic protective covering on the front. I fired it up lately, and yes it does work. The reason I am considering selling it is that I never use it and would like to take the proceeds and buy some other equipment.

Thank you in advance for your input.

3347. Do you use Hamtronics WX sat receiver w/MFJ-1278?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-04 00:00:00 UTC
From: kr4wm@bigfoot.com
Message-ID: <MPG.f67a06be9db7ee99896a9@news.infoave.net>
Source record: 151574

What additional equipment are you using to receive these
WX sats that transmit on 137.XXX? I intend to use my
MFJ-1278, but received a discouraging e-mail from the
fellow at Hamtronics telling me thier FAX converter
works better. Anyone using the MFJ-1278 to decode the
WX sats? Are you satisfied? Did you wind up scrapping the
1278 in favor of Hamtronics own FAX converter?

Thanks for any comments- 73, -Web in Myrtle Beach, SC

Thanks for your relply. The specs. for the Kenwood TS-570D on the
Kenwood web sight says that it will receive only on 6 meters. But you
are saying this is not true.

My TS-570D is a full coverage, 10 thru 160 meters HF radio. Will
receive the AM broadcast bands, but not transmit there. The TS-570S
is the same radio with 6 meters included.
Hope this helps,

>What is a Yaesu FT101E in pristine condition worth these days?

Most of the ones on the net have been running from $250.00 to $350.00.

Just depends on the misc. items that goes with it, ie: mic, manuel, key, etc.

From the sounds of yours I would say that $325.00 to $350.00 would be a fair price.

Anyone contemplating purchase of a vhf/uhf dual band HT, consider the Alinco DJ-G5T. I have had mine for a year, and it is a great little rig. I belong to a club here in Arctic Alaska, and collectively we own over 50 of them. We had some problems early on, but Alinco USA was johnny-on-the-spot in getting them fixed. They even sent their head technician to Nome, Alaska to do the repairs on site! Talk about service! I have used mine in all kinds of conditions, it works excellent as a cross-band repeater, as well. Audio is excellent. The price is now down to $300 and change, so you can't go wrong. If you want some further testimonials, feel free to e-mail me. ALINCO: PROVEN ARCTIC TOUGH

Agreed. There are good stories and bad stories with all the brands.

>Kenwood has had a rig of mine since Jan.24 and it's not repaired yet. But
>I have experienced this lack of quality and service from Yaesu and Icom as
>well. John N0EE

I am sorry to hear this. They must not have a part. I took my TS 440
to the new Kenwood service center last week and they fixed it in 3
days, it had some strange problems, now it is good as new.

The whole situation seems to make me try harder to work on my own rigs
when possible. Many problems have been fixable at home through the years.

Source record: 151588

I have the following item's that I'd like to trade for a
good used Kenwood TS-50S or Icom IC-706 transceiver:

Pentium 83MHz workstation, 32MB RAM, 1.02GB SCSI II HD,
16bit sound, CD-ROM, 16bit graphics, color flatbed
scanner, paint, sound and video editing software
15" monitor, approximate value $500.00

Panasonic Prosumer video editing/duplicating system with
Sony 13" trinitron screen, approx. value $500.00

Sony handheld 8mm VCR/TV, approximate value $250.00

Avon Redcrest, 9' inflatable boat, approximate value $250.00

I'm located in the San Diego area and would prefer finding
someone locally so we can both see what we're getting...

Thanks! Paul

Paul: I owned the FT-50 and had good experience with it. The RD is the Ft-50 with FT112.
One last thing. There is no need to do a hardware mod. The mod can be done through the software if you were to buy it. Do a search for ft-50 and read the FT-50 web page.

Hi there,,,,anyone out here ever done a conversion for the Gonset GSB 101 Linear Amplifyer?? It was built in 1958 and has an input for a receiver and a transmitter as well as an output for the antenna.. Since i have a transceiver i need to find a mod to convert to transmit receive from one antenna jack, and a relay.....any ideas.....greg

I'm pretty sure that the Standard C288A is still in production. That's the thin model with sliding keyboard cover. I've had one for years and it's a good rig. Then there's Yaesu's FT-33R, which apparently can be bought new also. Standard also has (or had) the 220/2m dual bander which got excellent reviews from QST. Suggest calling places like AES or HRO for current availability. 73, Andy - K4ADL

Source record: 151629

I have been very pleased with the 570. I do not have the 6 mtr version so have no clue about that. I originally thought something was wrong because it was SOOOOOOOO quiet. Found out it was just the dsp doing what it was supposed to do. Have worked a lot of good DX barefoot with only an 80 mtr dipole. It tunes up for most bands fine. You need to remember where you tuned it since it has a "memory" for the tuner and if you go from CW to SSB, etc you will need to retune it. Otherwise it remembers settings from band to band. No battery problems, but keep pwr supply on so would not know. Works fine. Middle range s/n (80MM).

3378. HELP? TS-440 to SM-220 Pan Display?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-04 00:00:00 UTC
From: jkinsley@raex.com
Message-ID: <6dji9d$uk6$1@nnrp1.dejanews.com>
Source record: 151630

Just picked up an SM-220 w/BS-8 Pan Adapter. Looking to pull the IF off the TS-440SAT to provide Pan Display on the SM-220. The 2nd IF of the TS-440 is the same freq. required by the BS-8. I've searched everywhere for ap notes or info, to no avail.

Has anybody done this or can point me in the right direction? I'll be a pioneer if I have absolutely to, but would rather find out if anybody else has been down this road before.

Any help or info would be very much appreciated.

Jeff

Does the TS-570 transmitt on AM. With the Yaesu FT-920, I understand
that you have to purchase a ciruit board for AM. I understand that you
have the D model. Can you recieve the 6 meter band?

3389. Question: Best radio for AM/FM/WB reception?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-04 00:00:00 UTC
From: baker@sgi.net
Message-ID: <353f7d89.1355458035@news.sgi.net>
Source record: 151641

Hi All,

This question may be off topic, but its the closest forum I could find to ask it in. I live in Western PA and would like to buy a radio that provides the best reception for AM/FM/WB. I want this radio for in my office where it must co-exist with computer equipment. I have a few other desireable feature, but none are requirements. I would like it to have a digital tuner with presets, external antenna inputs, and a digital clock. Sound quality is a concern, but not a major one. Primary need is for sports broadcasts, AM talk radio/news, and weather band.

I would also like to hear opinions on where the best places to buy this radio. Retail stores, mailorder, other?

Thanks in advance,

Tim Baker

Greetings all,

I have a vintage IC-215 (146-148 MHz Xtal controlled) FM transceiver.
I am looking to dedicate this to APRS and packet on the lower end of the
2M band. HOWEVER, ths rig was only designed to work in the 146-148 Mhz range.

Any ideas on how I can mod this down to around (gulp) 144.390 / 144.97?

Thanks

>help here would be appreciated .
>73 de VO1TY Tom

There is no direct correlation between the number of conversions and the
quality of the radio. More conversions does not mean better. In fact, the fewer
conversions that have to be used to meet a given performance specification
the better. Mixers are always a weak point in a superhetrodyne receiver.
If you can get the image response and selectivity you need with a single
conversion, then that's best. If you must double convert to get both image
rejection and selectivity, then you do. If you have to go so far as to triple
convert, there may be something wrong with your basic design.

One reason why a radio designer may opt for triple conversion is that
it makes offering IF shift easier. But with DSP in the last IF now becoming
available, that's becoming an obsolete idea.

> 73's Steve NS1R

Tiawan is Free China, not Red China. The quality of workmanship
there is as good as Japan, at least from the better companies on
Tiawan. There is a very strong high tech industrial base on Tiawan.
Likely the boards in your computer were made there. SMD work
is almost all robotic, so cheap labor isn't an issue (and labor isn't
either that cheap or that plentiful on Tiawan).

Kenwood has some models which are assembled in Red China.
I'd be a bit more dubious about that. They *are* probably still trying
to use cheap hand labor. Quality may be spotty.

> Lawrenceville, GA | Guaranteed |

AFAIK the triggering's the same between the 453 and 453A, but yes, the
bigger screen is much nicer. I have a 454 with the smaller screen, and
it can be a little uncomfortable to use at a distance.

I use a 485 most of the time, and have never noticed a difference in the
triggering sensitivity or control response between it and the 454. Both
are excellent. But I can sure tell the difference between the 454/485
and the newer junk, blindfolded...

When they stopped using the tunnel-diode trigger circuits, the
triggering quality went to hell in a handbasket.

if You have, of know something, please let me know !!

Thanks a lot <> Cees and 73'sssssss

3405. Loud *THUNK* on Astron PS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-05 00:00:00 UTC
From: mgilbert@csi.compuserve.com.NOSPAM
Message-ID: <efuJI2DS9GA.272@ntawwabp.compuserve.com>
Source record: 151357

Every so often when I power up my Astron 25Amp PS, it will deliver a very loud THUNK - is this what they refer to as 'inrush current'? Should I worry about it, and if so what does one do to solve this problem? It sure doesn't sound like it's doing the PS much good.

Greetings all,

I have a vintage IC-215 (146-148 MHz Xtal controlled) FM transceiver.
I am looking to dedicate this to APRS and packet on the lower end of the
2M band. HOWEVER, ths rig was only designed to work in the 146-148 Mhz range.

Any ideas on how I can mod this down to around (gulp) 144.390 / 144.97?

Thanks
-J n1rwy

: You can buy a Yaesu FT-8500 brand new for $379.95 at most any of the Ham
: radio stores. You can get one from HRO at that price and they will pay
: the shipping. I just purchased one two weeks ago and I just love it. It
: displays both vhf and uhf. It will do cross band repeater. You want the
: one with the MH-39 mic.

Maybe yes, maybe no. Depends on your tradeoffs. The MH-39 is smaller,
more "normal", but requires more button pushing for the same
functionality. I personally like the big mic (FS-10?) because most
all functions are available with one button push. It does have a learning
curve, and I can think of some changes I would love to make to it, but
it works well for me and I wouldn't trade it for the other one (which
I have tried, by the way...)

Try them both, if at all possible.

At that price, the FT8500 is a good buy. It seems to be a very solid radio,
plenty of features...

Unless the radio is say, 10 years old. Then you toss it in the trash
and buy a new one, for the custom-made chip that went bad is no longer
available anywhere. That's why we (here on the .boatanchors NG) still
operate BA gear; we're able to keep 50+ year old radios on the air by
trouble-shooting down to the one single bad component, whether it be
a resistor, cap, inductor, or tube. Replacement is easy due to the
wiring layout (point-to-point).

One wonders why you'd come onto the .BA newsgroup, and slam BA gear,
Gary (your R-390 comments). You've got to try to cease being so
confrontational. You're becoming a bit like Carl.

What exactly do you mean by "drop-in charger"?

For example, the Yaesu FT-50 by default charges the battery on the
radio with a wall wart charger. But you can also get a charging
cup (the CA-15) that you can drop a battery, or radio plus battery,
into for charging. It uses the same wall wart for power.

In addition, you can get the NC-50 fast charger plus the appropriate
cups for the FT-50. That allows you to drop two FT-50s battery packs,
with or without radio attached, into the cups for charging. It charges
only one radio at a time, but it will automatically switch from one
to the other. So you can drop two discharged packs in, and have two
charged ones in about 2 hours with no further intervention. The NC-50
is a fair amount of additional money, though - it doesn't come with
the radio.

Message-ID: <34FF1D8F.84A411D@wavefront.com>
Source record: 151378

Can anyone give me or point me to any tips on programming an IC-706 via its computer interface? The only reference that I have is the Instruction Manual. Most of the commands, per se, seem to make sense, but when does the radio return the OK Message, the NG Message or the IC-706 to Controller message? And in what order are the frequency bytes sent?

My first thought was to request the current frequency, see what I got and then assume that the command sequence would be the same. But then I couldn't figure out how to request the current frequency!

I managed to figure out my FT-990 by using the examples in its Instruction Manual and eventually wrote what I think is a pretty neat control program, but this Icom interface is clearly something very different. Any help whatever will be appreciated.

I don't know about any mods, but if you get cloning software and cable
which should be free when you buy the radio, it will expand the receive
range for 118MHz to 900 MHz with the cell phone freqs. blocked. I like
mine. I can set it for dual receive. AA1TA

>like it's doing the PS much good.

Yeah, it's normal, and no, you can't do anything about it.

The problem is that the power is applied at a random point in the
AC cycle. If you could guarantee that the residual magnetic
flux in the core was zero (from the last time the power supply
was on), and the AC switch was closed at the peak voltage
(when the flux is normally passing through zero), then the
transformer would behave normally from the instant power was
applied.

But turning on the power at a zero crossing requires the core flux
to go to double its normal level before it starts to decrease again.
Essentially, the flux in a transformer core normally goes from a
positive value "H" to an equal negative value -H every cycle of the
input. Starting with the wrong initial conditions requires the
flux instead to go from zero to 2H (or -2H) and back to zero.
Any residual magnetism in the core at turn on adds or subtracts from
this effect, and half the time makes it even worse.

This would be fine if the core was somewhat more than twice as large
as needed for normal operation. But manufacturers don't waste size
and weight and money like that - the core is only slightly larger than
needed. So the core saturates well before the flux reaches 2H. Once
the core saturates, the inductance of the primary doesn't generate enough
EMF to oppose the primary voltage, and the primary current goes way up
for the first half cycle. It is limited only by the primary resistance,
and whatever counter EMF the primary can generate. This current surge
causes magnetostriction in the core, which is what generates the thunk.

But after that first half-cycle has saturated the core, the second
half-cycle starts out with the core at maximum flux. This is even better
than normal operating conditions, so the second half-cycle will not
saturate. The third half-cycle will bring the core back up to the
edge of saturation, so there may be a bit of excess current for the
third half-cycle but much less. At the same time, this shifts the
operating point of the core back further towards balance.

As long as the core's flux waveform is not symmetric about zero,
the transformer will have slightly more inductance for the positive

half cycles than the negative (or vice versa). This asymmetry of inductance will push the core operating point towards symmetry. After a few AC cycles, the core flux waveform will be balanced around zero, and the transformer will operate normally. It will be quiet.

Dave

Hi Matt,
Well if it is a switching supply I would worry. But, I suspect it is a good old transformer type of the boat anchor variety. Indeed it is just the magnetic field in the transformer flexing the ferrite core when those filter caps start charging after you kick it on. It is common for high current supplies when they are first turned on. I like the description....

A quality power supply has a nice solid *THUNK*.......

3432. Kenwood 241a - Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-05 00:00:00 UTC
From: Keith Hall <khall@ruraltel.net>
Message-ID: <34FED46B.2101@ruraltel.net>
Source record: 151384

Hi All,

I have a problem with a Kenwood 241a mobile 2 meter radio.
I bought it about 7 years ago and have got along with it OK
(the display goes out.....I think they all do it). Anyway,
here is my latest problem and I was hoping someone may have
some insight.

I'm driving along one day (minding my own business) and all of the
sudden it starts ringing like a cell phone going off....the display
was not working so I'm not sure what happened. I got the display to
turn on (push on the front...hard) and now the tone bell is
blinking....the A.Lock is blinking and I have a lame number like 001.5
and it's locked up. It will not reset and my function key will not
work. So....has anyone had a problem like this they could fix?
I know it's 7 years old...but I'm not that hard on my radios. It
ought to last longer than that. Does anyone have any thoughts?

Thanks,
Keith N0OMX

Hello to all:

I just received a new Hustler 6-BTV vertical HF antenna. One thing I discovered (possibly omitted from the description in the catalog), or something I maybe should have assumed, is that it will need radials if mounted high in the air. I plan to mount it about 90 feet up a metal mast which will have its metal base on the ground.

It comes with no radials, and the instructions recommend rather long radials. What are my options? I'd like to work all bands without having to add on a zillion 32 foot radials.

I have a brand new Yaesu FT-900 HF transceiver with a built-in antenna tuner.

Thanks for any help anyone can offer.

3443. HELP: PL tone too strong for FT-50R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-05 00:00:00 UTC
From: LIUXI YANG <liuxi.yang@Eng.sun.com>
Message-ID: <34FF4663.F3949DD9@Eng.sun.com>
Source record: 151445

I bought a pair of FT-50RD's. For simplex, it works fine.
I am having problems when I use repeaters.
For most repeaters, I can trigger the repeaters' callsign
and hear it very clear, but I can not get my voice on the
air. So for, I only found one open repeater working for me.

I am a new ham. So I thought open repeaters might not be
strong enough. I decided to join a closed repeater for $50/yr.
But I had the same problem with this closed repeater.

Last night, when I was trying this repeater again, I found
that whenever I pushed the PTT, I could hear other people's
conversation. Now I believe that there is a problem with
my radio. It is likely that the PL tone transmitted by my
radio is much much stronger than the voice. So when my radio
is transmitting, the repeater picks up others' conversation
which was using different PL tone. And if there is no other
active conversation, the repeater simply can not pick up my
voice.

Am I right? Is there an easy way to confirm this? Unfortunately,
I don't have access to a scope now. So I want to find a real
easy way.

If so what should I do to get my radios fixed?

If there are other possibilities, please educate me.

Thanks a million.

> frequencies?

A simple matter of programming...

The serial port protocols are sort-of-documented in the manual. The 706 speaks a funky packed BCD protocol (why these idiots^W fine designers couldn't stick to straight ASCII is beyond me).

You'll need a micro to do the digit input and recognize the end of data entry. format that into a BCD packet, and squirt it into the serial port of the radio.

I fooled around with a Stamp-II based external memory module for my 706, it worked pretty well. I'd probably go with picking up DTMF tones and accumulating them into a valid frequency.

Can't point to an off-the-shelf solution right now. Check this space in a couple of months (when I have some spare time.)

I hear about these early serial numbers can you give us an idea of
what kind of numbers we are talking about as early numbers??
I have an FT-8100 for 6 weeks now and have had no problems with it
cross-banding or otherwise. Appreciate your input maybe it's time to give the
8100 some good PR.

> --
> Thanks & 73, DavidC AA1FA

According to the RCA Receiving Tube Manual (1968):

Hmmm... not very enlightening.

For 6JE6, they give no electrical data, just refer to the 6JE6A as the
replacement.
For 6JE6B, they refer you to 6LQ6 as the replacement.
Under 6LQ6, they say the 6JE6C is electrically equivalent to the 6LQ6.

They are physically the same, and what little electrical data is given
appears the same. I suspect that they are sequentially improved
versions of the same tube. I wouldn't mix them in an amp, but I
suspect you could use any of them. If you have the option and the
costs are about the same, I'd go with the latest version. Presumably
they've made improvements in durability, longevity, etc. without
modifying the electrical characteristics. Ideally you'd match them in
a tube tester. Haven't seen one of THOSE since Marconi was a pup...

Of course, I could be way off beam.. Anyone else got any insight into
this?

Hello Anybody,

Does anyone have a quick start card for the kenwood th-28a that I may copy and return, or if possible can you spare an extra manual to help me out. I will send a donation (reasonable) to cover expense or cost of the material.

Please respond if you can help, as I have recieved one in need of repair; but I do need the basic instructions to operate the rig, the schematic is not necessary. Thank you.

Source record: 151504

I'm not sure what you mean by programed obselescence but you may be referring to the rom chip which can fail and no replacement is available thus rendering your rig useless. I've heard the same about the TS-930 but have not confirmed anything. I can understand that sooner or later any manufacture will withdraw support of their older products. The only way to avoid this is to stick with a strictly analog rig of which there are few.

Thanks for looking at this.

I'am looking at purchasing a new HF+6 meters rig I currently have a Icom 735 which has triple conversion in the receiver.I have been looking at the Yaseu 920 and the Kenwood TS 570s. The Kenwood also has triple conversion I believe the Yaseu has double conversion. Does this indicate the receiver in the Yaseu is of a lesser quality? Any help here would be appreciated .

VENTURA, CA Area

Almost new Radio Shack HTX-202. Used on a few occasions to listen, never got liscensed, so never used to transmit. All there, packed in original box. I paid around $250 for this tranceiver a few months ago, and I got in over my head. I don't have the time to learn the material to get liscensed, and I need the money for school and a new vehicle. I am asking $150 or best offer. If you live in the Oxnard, Camarillo, Ventura or that area, I may be able to deliver it to your door. Any interested parties, please e-mail Redwood09@aol.com.

Thank you
Aaron Hendrix

Hello,
Not much into the ham radio hobby, would like to sell my Yaesu 290RMKII Multimode 2 meter transceiver. It comes with the following:

25 Watt Clip On Amplifier
Battery Pack w/new nicads
Wall Charger
Tone Board (Encode&Decode)
Antenna
Mobile Mounts
DTMF Mike
Carry Case, strap
All Manuals, original packing materials. Radio and accessories are in excellent condition, the radio has a small scratch next to the speaker where a sticker had been placed. When I removed it, a small piece of paint lifted. Otherwise, in excellent operating and cosmetic condition. I would like $475 for everything, not including the shipping. Will consider a swap for a mint Yupiteru MVT 9000, or a AOR 8000 (Not "B" model). Thank you for your time.

We went paddling in the sea downstream from Windscale with 2 little dogs, a few years ago. They seem OK (The dogs. And the feet. The "Daily Mail" would be far more worried about what the poor little doggies left in the water. AND the feet.)

We also went swimming off Aldeburgh, not 2 miles from Sizewell, most mornings. Then one evening we walked back from dinner after dark and saw the sea glowing green where the waves were breaking. Very pretty but we paused for thought. After realising the true explanation we resumed bathing in it.

3486. Re: ICOM IS JUNK

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-05 00:00:00 UTC
From: Mike Willis <"M.J.Willis "@rl.ac.uk>
Message-ID: <34FE6ABE.DA6FC638@rl.ac.uk>
Source record: 151525

I have consistently found the equipment supplied by ICOM to be much better
than the equivalent from Yaesu but then I use equipment for contests and value
a good receiver. My IC735 was bought second hand and has worked very well
for many years, the IC275 and IC475 are still the only VHF/UHF rigs available
that
are any use in a crowded band. Try using an FT736 - so many buttons, FT726
too many intermods. Kenwood, after the TRIO/KENWOOD service fiasco?

The service from ICOM UK is exceptionally good.

I seem to remember reading in the mods instructions that the MARS/CAP
mod was *required* for the software mod to work. Quoting from the mods
document title: "Super-Hyper Awesome Mod: The mother of all Mods!!!
(Requires ADMS-1C software and MARS/CAP -mod to be performed)"

I need a 20 amp continuous PS. I have seen these "switching supplys" which are much smaller and are found in many radios with internal power supplys.

Is there much of a difference between the new switching electronic jogbbies and the old Transformer type like the Astron RS-35?

The Alinco DM-340MVT also looked good. 30amps continuous. Does it hold up?

Thanks

The Alinco has 30 MVs Ripple ves the Astron that has 5 mv Peak to Peak.
Also, MFJ appears to be selling a Power Supply that looks like the
Alinco. If you don't need the light weight ,Small Power supply I would
buy the Astron (Super Rugged,Reliable). All Astron makes is Power supply
stuff so I think got it right by now. If you need small lightweight
then go for the Switching. I have found Switching power supplys to not
be as reliable as the Large Transformer type units. Also, the regulation
or "ripple" isn't as good plus they generate noise on your radio.
Astron Claims their switching works great for Even HF radios.

Mechancial bonding problems generally give intermittant behavior, so this
is pretty obvious. If the chip is bad, it won't be intermittant. It will be hard
failed. So if the radio is just acting flaky, you know you have a bad bond
somewhere. A visual inspection with a loupe will usually show it to you
right away, and if not, some tapping with a non-conductive tool in the
suspected area will quickly find it.

Ah, but Grant, as I told you in email, you certainly *can* make use of the service information for the IC706. Once you learn a few very simple new techniques, you'll find working on this sort of equipment is much easier than working on one of the old boat anchors. Yes, the parts are tiny, get a jeweler's loupe. But surface mount is a piece of cake to work on compared to the old wrapped and soldered tie points, or compared to thru-hole board mounting. All you need is access to one side of the board to work on it. The trick is to throw away your soldering iron. Get a static hot air source and some SMD solder paste. It's *easy*.

Be willing to pay a bit more and get a 453A. It is well worth it. I still
consider the 453A to be the best all around service scope. The trigger
circuits are top notch, and the display is big and bright. The older 453
has a much smaller display, and the triggering isn't as good. I have
a 4 channel 2465A now, but I still reach for the 453A first most times.
It gets the job done with a minimum of complex setup and hassle.
(The trigger circuits in the 453A are superior to those in the 465
or 485 IMHO. I wouldn't pay a preminum for either of them for
HF servicing.)

Johnny, all radios eventually become obsolete. The manufacturers have
to buy parts to build them, and the parts manufacturers discontinue old
parts when the technology on which they are based becomes obsolete.
That happens more and more quickly today as new processes and
new solid state technologies are developed. Solid state advances on
a roughly 18 month cycle (Moore's Law). So anything over two years
old is probably based on obsolete parts. When the radio manufacturer's
production surplus inventory is exhausted, that's the end of factory
support.

The problem can be particularly acute for chips with a high level of
integration. They are often single source, and when a newer technology
comes along, they are dropped. Usually, there is a functional equivalent
in the newer technology, but it usually isn't a pin for pin drop in replacement.
That means to keep older radios going you may have to do some modifications
to the design to use whatever parts are currently available. Often that isn't
cost effective.

This really isn't the radio manufacturer's fault. It is just a result of the
natural progression of technology. OTOH, solid state is *very* reliable,
and you generally won't have to do any repairs for the usable life of
the radio. If you really like the TS-940, find a parts radio to keep on the
shelf if you ever need to rob a part to keep your main unit going. You likely
never will have to, but it'll give you a warm and fuzzy feeling to know
that you can.

Wow, you must have a really hot shack. RF can get back into the regulator
on any PS and cause it to go out of regulation. But it generally requires a
lot of RF to get into an Astron and throw the 723 out of regulation. Try a
0.001 uf cap across the DC out terminals to suppress this. But I'd seriously
look at shack and antenna layout to see why your shack has so much RF
floating around down there instead of up on the antenna where it can do
some good.

Mike;

Probably the best information on older radios is a book published by the ARRL
titled 'The ARRL Radio Buyers Sourcebook Volume 1'.

It lists the majority of commonly available radios covering the past 20 years.
Radios like the Drake R4 series, Kenwood TS520, Yaesu ft101 etc.

Newer all solid-state radios like the Yaesu FT1000 and Kenwood TS950 are also
listed. The book has actual QST reviews of the radios, along with product specs.
They also mention specific quirks or potential problems that the various
radios had.

There is also a Volume 2 that has some of the newest rigs, along with the newer
handie talkies.

I have both books, but think that VOL 1 is the best since it lists the older
rigs that are more easily affordable!

Good luck with your CW test and 73's!

Hey! Anybody own the Kenwood TM-V7A, you know the "Cool, New, and Blue"
rig. It looks pretty cool and has a lot of memory but I'm not sure if I
want to Invest in it. Or does anybody else recommend a dual-bander.
Also I have a wierd problem I just bought the Kenwood TH-79A and I think
its having power problems. First it worked GREAT! Then all of a sudden
it worked every now and then (like only when it wanted to) and now I
doesn't want to turn on at all. The Battery was charged but It doesn't
even want to turn on via power supply. Its really wierd. My Standard
HT is messed up and this was supposed to replace it. Now the Standard's
better. (I can't win)
Thanks for the help

3511. Help with tube rigs tuning theory!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-06 00:00:00 UTC
From: morinm@csgoeland.qc.ca
Message-ID: <6dq702$371$1@nnrp1.dejanews.com>
Source record: 151300

Hi there
I think my theory is a little rusty. Is it a fact that a
tube output transmitter like a Kenwood TS-830S can be matched to a
standard dipole without an antenna tuner? If so, what would be the advantage
in using a tuner anyway? If you can use it without a tuner, then how do
you tune it using the standard controls like LOAD, PLATE abd DRIVE? These
are the tuning controls on a Kenwood. Does a tube rig like to see a 50 ohms
load or can it use anything? In the Kenwood specs, it says RF output
impedance 50 to 75 ohms. I guess I am too used to using a solid state rig
and really need to review some theory. Thanks for any help.

Mine starts with a 7H0XXXXX maybe they came to grips with themselves and
corrected the problem. Though I'm finding out when I cross-band using a 440
simplex freq like 446.100 171 tone into a 2meter repeater freq I get a hum in
the speaker during transmit. Yet no one else hears it. Anything like that ever
happen to you??

Source record: 151306

Doug...I ran into the same problem on my VX1-R. Yaesu has made changes to many of their radios to make it more difficult to do hardware changes, and the newer versions of the ADMS have had changes to prevent software mods. Reason being that a high percentage of microprocessors have been damaged by the software mod attempts, and then warranty claims being submitted. You might try to make your modified template, send it to the radio with at least one frequency programmed, then download it to the radio. Now make another template from the now-modified radio and rename it and use it instead of the first one you made. You will probably have to do that each time you make a download to the radio.

On versions later than ver102 of the software, you will receive a "corrupt file" if you try to edit or open a file that you have uploaded from your radio. I would only do the hardware mods.

I had purchased a Standard C228 (2m/220) handheld and really liked it but returned it because my friend got a Icom W2A (This was ~1991 or so). I sort of regret that now because I really liked the C228.. Whatever happened to that? Why did they stop making them? Were they just not selling very well? Too pricy? (It WAS pricy)

>battery to be dropped into a holder/stand and recharge the battery, then
>maintain the charge with a trickle current.

Your VX-1R is somewhat of an exception. The FT-50 does not come
with one, but you can buy either fast (NC-50) or slow (CA-15) charging
stands for it. Many other HTs come with a charging stand by default
(e.g. FT-51).

The new tiny credit-card-size Alinco radios come with a charger that
the radio attaches to - it's not quite drop in, but much the same
functionally.

I bought, at a hamfest, an HT antenna, BNC, 16-inches
long, thin floppy rubber. It has red shrink tubing, 1.6 inches
long at the BNC, with the Logo, "AEA" in white. Not
sure of the letters, they run together, but at least "A?A".

The seller said it was for 440. It works there, I'm not
sure how well. Works poorly on 2m.

Can anyone ID this product?

Elliott

It does *receive* aviation frequencies just fine. It even switches to
the AM detector automatically in the aircraft band.

I suppose in an emergency you could use the PTT to transmit Morse code
even though you don't have an AM modulator or PA. Trouble is, nobody
listening to aviation frequencies would understand it.

Hi Scott

I realise my suggestion might be contrary to your thinking, I am
refering to the idea of 90 feet sounding terrific, but would you
consider ground mounting the antenna and running the, 3 or 4, 32 foot
radials? I don't know how much yard space you have.
I tried a, homebrew, ground mounted vertical and they do perform quite
well.

I recently have had a problem with the memory in my VX-1R.It
only affects the UHF memory.If I go to the memory from VFO it flashes the
memory number in the left upper corner for just a sec,then switches to
something like 1s or l and flashes.Also in the very left upper corner,there is
the letters ps....then when I try to go up or down,the whole display freaks and
goes to 3F3F3F....I have reset this thing a thousand times..This all happened
just shortly after I purchased and started using the ADMS-D programming
software...There was an artical on the newsgroup that said you could mix UHF
and VHF frequencies in one band...(I used The UHF band)....It never
worked....The VHF frequencies just blinked....Then about a week later the radio
flew south....All other memories,Vhf,FM,etc...work fine...as well as the UHF
VFO mode.......Any Suggestions?..Don

> any ideas ? Mike (WS8D)

Actually what is happening is PLL unlock. When that occurs the uPc
blanks the disply to alert you to the fact. The question is which one?
(There are 8). It is probably not the uPc or the 5v line.

With a few more clues I could probably tell you which one and the fix.

I've JUST built a CI-V for $3.05 all new parts. Anyways. I've been playing around with Visual Basic and created a really simple program to read the info off the radio. The OCX I'm using comes with VB5 and when ever there is a event from the comport it fires away at the routine and it displays the freq/mode or what ever. It's REALLY simple. But I'm having some really stupid problems now that for some reason it's not reading Hex value of 11.

What I'll like to do is maybe setup a group of 3-4 programmers to work on a Icom Control software in VB5(Since thats all I have). 3-4 minds would be better then one. Anyone Interested?

Btw I have a IC706

CJ <cjr@wavefront.com> wrote:

Hi Scott, this is just a wild-March-hare idea. If you insulated the antenna from the mast, you might get away with a single near-vertical radial per band - essentially a half-wave all-band vertical antenna.

>like it's doing the PS much good.

Yeah, it is due to start up inrush. The transformer field is
much greater than normal during the first half cycle,
especially under certain turn on conditions, and this gives
the transformer core a good hard magnetostrictive jerk.
The case acts as a sounding board for that, and that's
your thunk. This is perfectly normal. You can dampen
the thunk a bit if you jam something between the top
of the transformer and the top case half. This breaks
up the sounding board effect. But you'll still get some
noise even so. Don't worry, be happy.

3560. Yaesu 50RD Extended RX/TX Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-06 00:00:00 UTC
From: ralph@hemi.com
Message-ID: <6dpgba$cku@news.hemi.com>
Source record: 151415

I am considering (very seriously) the purchase of a 50RD. One of the reasons is that transmit frequencies can be modified to go to (as much as i've seen) 120MHz on up, including MARS/CAP and a lot more. My question is, can the transmit go lower by just a few MHz? I am a pilot and the ability to transmit from, oh say 117MHz up would save me from needing to buy another portable radio. I have seen the benefits of having a second battery-powered aviation HT in the plane, and it seems like this would be awesome if I could use the 50RD for that as well as working ham while air-mobile. (Especially since a good Icom aviation transceiver runs about $350-$400!)

I have own the 8100R for about a year, Love it, have had no problems, it is the best radio that I have ever owned, Unlike most radios, the out of band receive capabilities are great.

3564. 10mtr radio question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-06 00:00:00 UTC
From: mdt2@po.CWRU.Edu
Message-ID: <6dplbe$28f$1@alexander.INS.CWRU.Edu>
Source record: 151419

I am hopefully going to be passing my 5wpm code test within the next several weeks. After that I will be in the market for a 10mtr rig. My question is; How can a new ham find out about older rigs that may be available on the used market? In other words what is the difference between the various rigs out there? Is there a good book to use?

Thanks,

Mike/KB8VYT

HAMFEST March 8, 1998 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST-COMPUTER SHOW - MARCH 8, 1998

LINDENHURST, LI - NY

On March 8, 1998 the Great South Bay Amateur Radio Club & Suffolk County Radio Club will again sponsor an indoor Hamfest-Computer Show. The location Will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.

This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and access-ories, software, books, technical manuals, ARRL information, Amateur Radio License Exams and information. Door Prizes. General admission is $ 6.00. $5.00 with coupon. (Coupons will be available at the door.)

ARRL VE - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Tom Favilla N2MIG at (516)957-5985, during EVENING HOURS (7PM-10PM), or info@gsbarc.org
NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available. Tables are 2.5ft x 6ft.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is available during the club 2-meter info net:
GSBARC-Monday at 7:00 PM on the W2GSB repeater, 146.685 -600 4Z(136.5)PL.
SCRC - Wednesday at 8:00 PM on the W2DQ repeater, 145.210 -600 4Z(136.5)PL .

How many have hade the voltage rise on their Astron Power supply while using an HF rig that is not connected to the power supply?

When I key down on the 40 meter cw band at 100 watts..... the voltage on my Astron RS-12A rises to 20v plus..... My HF rig has it's own power supply.... obviously rf related

dt

Lovely rig - I rue the day I got rid of mine....

Just get the crystals and do it! It will re-tune EASILY to where you
want to go..! (Go through the usual alignment for tx & rx, the stages
are all wide enough for a few Mhx shift. (I used to have one back in the
'eighties on 149.4Mhz & 145.5Mhz at the same time.)

Good Luck.

Even if it could go there and could transmit AM it would be illegal to use for that purpose. Non-FCC/FAA approved. The federal approval process (and just a little profit) are key reasons for the huge aviation rig cost. 73, DavidC AA1FA

An "Elmer" (translation: old timer/experienced Ham with a clue) would be your best hope for coming up with a decent used rig in your price range. This person could also help you to learn how to operate effectively and properly. Lacking that, a real simple rig would be a used Radio Shack HTX-100 for ssb/cw.

A better first choice would be an older tube rig like a Heath HW-101, SB-101 or 102. You'd learn about tuning into a load, have an almost indestructable rig that will load into most any simple antenna without a tuner (I once used 75 ohm cable tv wire to a junk wire dipole approximately 65 feet per side and worked the world!), and have 100 watts ssb/cw.

You will want to get an external audio dsp unit like Radio Shack's or the equivalent to help make 20 and 75 meters bearable.

Congratulations in advance! 73, DavidC AA1FA

Hi Mike!
Good luck on the 5wpm, Itrying to get my speed up so I can go for my general. There are several good 10m rigs, I'll recommend the HTX-100, made by Radio shack. You can get them at hamfests for between about $75-$120 and they are nice little rigs. It is a SSB/CW rig. It puts out 5-25 watts. I bought mine at a hamfest 2 years ago, looked brand new for $115.

Again, good luck!

>How do you know only 3 have been killed if its still classified?

It very well may be classified, but it's common knowledge in Idaho
where it happened (where I learned of it).

My details may be off somewhat, but it goes like this:

It was an experimental 3MW reactor operated by the U.S. Army. During
the Christmas shutdown a crew of 3 techs (minimal nuclear training)
were to do maintenance on the rod drive motors. The rest is
speculation as the crew was killed and no one knows for sure, but it
seems that after servicing the motors, a tech was swinging the first
one back into place on a chain fall and decided that it would be much
easier to pull the control rod up to the motor to attach it rather
than bolt the motor in place and then attach it to the rod. This
reactor was designed such that a single control rod could take it from
shutdown to supercritical (Not surprising since the design was for a
portable field reactor for Army use). The tech apparently got the rod
up about a meter when the reactor went supercritical and the cooling
water surrounding the core flashed instantly to steam thereby forcing
the other control rods from the core from the pressure and
subsequently cooking the crew. The fact that the core was not
pressurized and the water vacated immediately resulted in more of a
squib reaction than a full nuclear blast. It was a slow fission
reactor and with no water to moderate the neutrons, the reactor
basically shut itself down. The core was damaged beyond repair and the
whole plant had to be decontaminated and scrapped.

Hmm, I wonder if you are inducing RF into the transformer and somehow causing an amplitude increase within the transformer itself. The Astron power supplies are not terribly complex (hence their reliability) and there's not a lot of parts to induce RF into. There's also not a lot of filtration either. You might try moving the PS to the other side of the room temporarily just to see if it still happens. If not, your HF rig is leaking RF somwewhere. If it still rises the voltage, you'll have to do a bit more looking...

Just my $0.02 ... 73's!

3586. Daiwa CN-410M SWR/PWR Meter Illumination

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-06 00:00:00 UTC
From: whitener@hiwaay.net
Message-ID: <haonkSVS9GA.204@newstoo.hiwaay.net>
Source record: 151441

The subject meter requires 12 VDC for meter face illumination. Does anyone know where to obtain the matching other halves of the quick disconnect connectors on the power supply wires? Does anyone know what brand or type of connectors these are? This will make sense if you have one of these meters; Otherwise, I doubt it :-)

The obvious solution is to apply one's wire cutters at the appropriate place and proceed with some other arrangement. But this is only viable when one is sure the unit is not going to be returned for refund.

>All 3 of my Astrons make that noise when turned on.

Most likely the sudden magnetic field generated by the transformer core (when it is first hit with AC power) "thumping" the top cover (causing it to flex a bit).

I think they all do that unless you reinforce that flat metal top cover so it won't flex in this field. Perhaps a nice padded brick left on top would quiet it down if it bothers you.

The best solution is to leave the supply on all the time, then you won't hear that mechanical turn-on "thump".

From: Joe NW0A <manntis@loop.com>
Message-ID: <01bd4897$87c5f140$813ed3cf@dr.lizard>
Source record: 151466

Thanks for reading this plea for assistance. I had no luck when tried to find an answer using an Internet search engine.

I was asked recently to try and repair a handheld that a friend left alkaline batteries in a bit too long and the batteries leaked. After removing the main PCB, I discovered that some the battery ooze got between the rubber touch tone keypad and the PCB, and was very effective in removing the material on the lower 1/3 of the PCB that makes contact with the back of rubber pad when a key is depressed. The material that was removed by the battery leakage is not made of copper (the ooze did not affect the copper PBC traces), but of some soft, dark material that has the appearance of graphite.

Short of replacing the damaged PBC (which in effect would mean replacing the main PCB with the CPU), do methods exist that will restore missing contacts on the PBC that were under the touch tone pad keys?

Thanks in advance es vy 73 de Joe, NW0A

One real advantage of the Bird is that you can select a slug that matches your needs. The disadvantage of the bird is cost of the slugs. To cover the range you mention with 1 watt slugs would be $1300, To do the same with 2.5 watt slugs is better, about $1100. :>)

One reason for the BCD is less data and faster through put -- figuring
a millisecond per byte! Spin the VFO and watch the data fly out of the
706. An with CPU's who cares what the data is, one's and zeros its all
the same, time is of the essence.

Actually, its most likely the ROM socket. This is a common problem with
the TS940, and the fix can be found in many mod databases. Try going to
www.qrz.com and click on the Radio Mods button, scroll down to the TS940
eratic display problem and check it out. This is most likely your problem.

73 and good luck, Mike - WQ0N

Are you sure this is the whole reason? It would seem to me this
particular situation would clear up in 1/2 cycle of the AC line -- but
the "Thunk" lasts somewhat longer.

I think the high charging current required by the very large filter
capacitor is the real source of this noise.

Yeah, the surge of current caused by the load on the secondary would
also cause magnetostriction in the core. You're probably right that
this is most of the noise in a power supply.

The whole truth is probably something like this: The amount of the
thunk that you hear *every* time you turn on the supply is mainly charging
the capacitor. But if you hear a particularly loud thunk one time when
you turn it on, that's probably transformer saturation on top of
capacitor charging.

I was really thinking about an unloaded transformer, not a power supply,
when I wrote the previous article.

Humm-

My VX-1R is NOT capable of using ANY drop-in charger that I'm aware of,
either factory or aftermarket.

Maybe I should define what I mean by "Drop-in Charger"

I consider a drop-in charger, a unit that will allow an HT w/attached
battery to be dropped into a holder/stand and recharge the battery, then
maintain the charge with a trickle current.

My FT-8100 serial number started with 7E021XXX. I understand
that equipment can have problems. What was so frustrating
to me was these radios had known problems and they sold
them anyway and then expected their customers to pay the shipping to
have them repaired. Nice to know they cleaned up the 8100.

Now they say they have a new warranty policy where they pay shipping both
ways. But they haven't announced it to their customers, and when I shipped
my 8100 back a second time, even though the policy was in place,
the company hadn't told their customer service people about it. What
good is such a policy when they don't tell anyone about it? The
vice-president, Mikio Maruya, has written me saying Yaesu now pays
shipping both ways. It seems you have to call him personally in order to
have the policy implemented. I'm afraid the 8100 changed my view
of Yaesu and perhaps I haven't taken my lesson very gracefully.

I always liked the advice that when a bargain looks too good to be
true - it probably is!

Dick knows that I keep my riding hats and sticks in the back of my
car, so I'd better reassure him that I won't take your suggestion too
literally.

Cheers
David (as a Dunfermline resident I liked the
Carnegie quotation...)

It is entirely possible that you will not need radials for satisfactory operation. Essentially you have 1/2 of a dipole with a vertical. You need something for the other half and typically that is good old Mother Earth. Since Ma Earth is usually a poor conductor, ground radials are required to assist in conductivity.

If you are tower/mast mounting the vertical, the supporting structure can serve as the counterpoise. The problem here is that the angle of radiation will tend to be quite high. One of the "benefits" of vertical antennas is that there is a low angle of radiation. The low angle is beneficial for long distance communication. At 90' you will probably find a significant lobe at about 30 degrees above horizon.

Depending on what your planned uses are for the antenna, you may find that the performance is fine. There will probably be some change in feedpoint impedence although it is difficult to predict and probably will not cause any problem. The bandwidth will be impacted and could even improve as bandwidth is largely a result in rate of change between reactance and resistance.

If you are interested in really getting into vertical antennas, Paul Lee (N6PL) wrote a book about 15 or 20 years ago titled "The Amateur Radio Vertical Antenna Handbook" that is probably still available and is the best book on the subject I have found.

If I can be of help, you can Email me at K4KK@aol.com.

Ed, K4KK

If you can't use radials with the antenna, you're probably not going to be very happy with it's performance...it requires radials to perform as designed.

See if you can return it, and go with an antenna that doesn't require radials - there's plenty of them around depending on the bands you want to operate.

John

Mine do that also. I wrote it off as the magnetic field, created by the transformer, asserting its presence on the cabinet.

Looking for a good dual band mobile that someone might be willing to trade for some misc. items (older 10yr computer w/vgamonitor, RS digital sound level meter, RS Pro-2030 scanner, RS DX-302 Communications Rec. 3-30mhz, etc). If you have a d.b. mobile in good shape (8 or better) and interested in trading, let me know. Brand doesn't matter as long as its fairly newer (less than 5yrs old) and in reasonable shape.

If you know where there is a PL dev adjustment in the 706, I'd sure like to know.

My friend and I both have this "loud PL" problem. Interesting thing is that on the bench in Bellviue (I took it there while driving to Canada from Calif last summer) the dev reads normal. But they could hear and acknowledged the problem. Fortunately (for me) I use mine on HF SSB exclusively, and have a Kenwood FM tri-bander in the car, too.

Just obtain and plug-in the appropriate crystals for 144.39/144.97,
trim and go! It should be as easy as that!! In Europe the IC-215 was
crystalled in the 144-146 range, the 2m allocation here. You shouldn't
have any problems.

But did you try a balun at the 40m antenna's feedpoint? 30 feet should
be plenty of separation for 100 watts. Your feedline has got to be radiating
to get the kind of fields needed to trip out the regulator in the Astron down
in the shack.

This from the Yaesu reflector

Hello Jack,

The info you heard second hand about most Yaesu HF radio's being
discontinued is totally false. Let me set the record straight.

The FT-1000/D will be around another 3-4 years.
The FT-1000MP will be marketed for a long time.
The FT-920 is only 1 year old, so this also has many years left.
The FT-900/CAT is due to go away in May/June of this year.
The FT-840 has many years to be marketed.
The FT-736R will probably go away later this year, But remember this
radio has been on the market for over 10 years.

Last but not least... The exciting new FT-847 will start shipping in the
U.S. in early March.

Best Regards and 73's,

Kevin Karamanos
Director of Sales and Marketing
YAESU USA

Good plan. Worked for me. Listened my ICOM 706 MkII and AT-180,
liked it, and just upgraded to General. Studying for Advanced now. :-)

> My manual suggests I use the ICOM
> AT-180 (approximate cost $500). Any pros or cons on using this antenna
> tuner?

The AT-180 only handles a maximum mis-match SWR of 3:1. That is not a
very wide range tuner. The ICOM AH-3 costs a bit more, handles a much
wider range of SWR mis-matches, and can tune a random wire (or a
back-stay on a sailboat). The ICOM 706 has the necessary cable
adapter on its back to talk directly to the AH-3. I wish I had
purchased a wide range AH-3 instead of my very limited range AT-180.

The LDG antenna auto tuner can be had for $210, handles 100 W, and can
handle a mis-match SWR of 10:1. Much better deal than any of the ICOM
auto-tuners.

> Is there a tuner that can go from 1.8MHZ to 165MHZ?

Not any automatic tuner that I have ever heard of.

> (Or is this
> a pipe dream?).

Yes, I fear so.

> Also, any suggestions on the antenna(s) I should look
> at, for connecting to the radio? I bought a Perth Outbacker as my
> antenna for sailboat usage....but personal circumstances have had me
> change my plans and create a base station, instead.

I have a W9INN (see adverts in the back of CQ and QST) horizontal
dipole. This a coil loaded (not trapped) antenna which handles 80m
though 10m without a tuner, at least for part of every band. With my
IC-180 I can tune all of every band. It also tunes up OK on 6m,
though the manufacturer does not claim it will. Start with one of
those (sized to fit your lot) and skip the antenna tuner for now.

I also have a Butternut HF6B-X. Another great antenna (a vertical).

Put as much wire as you can as far up in the air as you can, and tune
it with a manual tuner (inexpensive) or with a wide-range auto-tuner
such as the LDG (more expensive) or the IC AH-3 (very expensive).

> While I'm at it...I am also looking into a PS85 (Power Supply) as I will
> not have the capability of using my sailboat batteries, anymore. Is
> there an equal or better Power Supply I could use?

Consider the Astron non-switching supply. The Astron switcher is
reputed to output birdies on HF. Or use a gel cell car battery (works
even when the power goes out). A ripple free power supply.

3654. Discriminator (digital) mods for HT

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-07 00:00:00 UTC
From: slmyw@cc.usu.edu
Message-ID: <A3oG6+QorG1N@cc.usu.edu>
Source record: 151229

I'd like to start experimenting with paging in the 2m band, and am interesting in modifying one of my two HT's:

I want to tap off the audio from the discriminator, and (optionally) inject an input signal past the audio stage. Ideally, I would like to add a small jack or two to the case to allow this.

I'm hesitant to invest the money in a larger (easier to modify) rig, until I know this will do what I want it to.

If anyone has any information on the Kenwood TH-27A, or the Icom W-32 that would help along these lines, I'd appreciate your help. I've looked at the normal "mods" sites, but 99% of everything there is for MARS/CAP stuff.

I have the block diagrams for the Kenwood, but I would rather have some input from someone who had some experience in this before I start guessing on things.

This really takes me back ...

Since these were used as the horizontal output tube for TVs I remember them well. The "B" version was supposed to be a beefed up version of the original, the "C" beefier yet. I seem to remember them adding extra fins on the plate to improve heat dissipation. Common problem was overheating when the flyback transformer was on it's way out. Some sets just normally overtaxed the thing and it always ran warm (read dull red glow).

The 6LQ6 was tougher still - I seem to remember that the actual plate area was bigger (taller) and it's the preferred replacement (at least in the TV land).

From: gem1@ibm.net
Message-ID: <6drhs4jrl1@nnrp1.dejanews.com>
Source record: 151249

Given the large size of the power supply 'block' for the VX-1R, can someone tell me if the voltage/current regultion to charge the Lithium battery is incoporated into the monstrous power supply, or is it 'in-board' in the battery/radio?

If the regulation is inboard, then I could use a much smaller power supply to charge the batteries, rather than the one supplied with the radio.

If you turn it down to much then the CTcss tone encode won't work.
I had the same problem on an Alinco DR-570T. There is a pooint were the
tone is not audible and still works with repeater that need the
Subaudible tone.

I am looking to purchase a H.D. Power supply, adjustable, with meters and or rack mount. Preferred but will consider anything.. (Does have to be a 50,60, 0R 70 amp version..) I do have a like NEW ALINCO DM-1350 35 amp supply that I would like to trade and pay cash difference to up-grade to a larger supply. We are setting up a new repeater site and our budget is somewhat limited at this time. Can anyone help out. Tnx. tbolt@ix.netcom.com

Source record: 151256

I think Gary is correct..... to clarify, I did check the actual
voltage at the supply at over 20 volts.....It shut down my 2 meter
radio. The apex to my 40 meter inverted V is about 30 feet above my
desk with my Ham gear..... When I move the antenna I think the problem
will go away. I tried ferrite rods ect. and it didn't help.

Thanks Don, W6IQ

From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <6drpq9$r7l$6@clarknet.clark.net>
Source record: 151258

Hello. I have a question on the TC-4002-SW base station meter made by Dosy. What is the meters freq. coverage (meaning, on what frequencies will it operate on)? I have checked several sources and gotten many different answers. Some say that it was made for use on 10/11m, some say you can use it for 160m-10m, some say Dosy does not give a freq. coverage. Any help is appreciated. Thanks a lot in advance!

Well, anywhere major construction occurs there are the occasional deaths associated with it. Years ago I saw a vintage newsreel describing construction of the Depression-era Hoover Dam in the western USA, and as I recall the primitive footage showed a "T-model" truck falling over the edge of the gigantic dam in progress. Seems like over a dozen workers were killed in that project, and that doesn't count the "gangster victims" that were mixed in with the concrete. Construction deaths also do not include the thousands of deaths over the years from mining coal. I grew up amongst Uranium mines and mills and tailings piles and I recall 2 or 3 deaths associated with accidents from heavy equipment operation etc., cave-ins and such, but I recall no old-timers dying from coughing up their lungs slowly, as they do in the areas surrounding the coal mines of the USA.
Even Chernobyl, that hiss-and-byword of the nuclear horror group, fails to approach the casualties incurred from more conventional methods of generating power. (Generalization gleaned from Reader's Digest article on Chernobyl from some unknown months ago)
Is any of this on-topic for this group? Oh Well
Jim W5AOX

>close should they be. I have access to scrap copper wire, and it would be helpful
>to know what size to save and what to send in for scrap.

The minimum size is whatever won't melt under the current load in the radial.
But more practical concerns arise. One of those is how long it takes for copper
to corrode away when buried. That depends on soil pH, but I wouldn't bother
burying anything smaller than #22. It won't be there long enough to make the
effort worthwhile.

Ideally, current shares equally between radials, so the more of them you put
down, the less each one has to carry individually. For example, if you use
8 radials, each should carry 1/8th as much current as the radiator. So you
can size them accordingly.

Very crudely, the RF current carrying capacity of a wire halves for each
reduction in wire gauge. So 1/8th capacity would be 3 wire gauges. Thus
if you use #12 for your antenna, the radials should be #15. Since #15
isn't a common gauge, you'd use #14 instead. But current on a buried
radial tapers as it disperses into the surrounding soil (sheet resistance
effect), so you could use #16 and still do fine.

Dosy makes meters targeted at the CB crowd. They are pretty liberal with their power readings at the 25-30 mhz. range, I wouldn't trust them for any accurrate power readings even on the 11 meter band. However, the SWR function should be OK on HF as long as the meter will calibrate properly on the foward setting. Personally, I would look for a better quality meter, i.e. Bird, Drake, etc...

>battery/radio?

I've wondered about this myself. Oddly enough, the cigarette lighter
power adapter is far smaller/lighter.

I gather the DC input current to the radio must be current limited.

Too bad Yaesu did such a horrible job on the AC supply.

Have you seen the 5V 1A AC supply for the IOMEGA ZIP DRIVE PLUS? It is
about 8 cubic centimeters and built right onto the AC plug (looks like
a _slightly_ fat AC power plug). It is actually delivering MORE power
than the VX1R takes.

>
>Matt Gilbert
>KC8FAY

My experiance tells me that the transformer windings have settled a
little. The inrush current on startup builds the Magnetic field. The
devlopment of this new field causes the windings to move a litte in
relation to the core. Kind like the sound of two magnets comming
together.

In small transformers, link in Astron Power Supplies, this is not a
problem. But on a Utillity Line transformer....

That little supply will continue serving you for many years.

Hello:

I collect used Gertsch, Singer, Ailetch & Eaton ratio standards, ratio transformers, "RatioTran" series boxes, decade AC dividers and the like.

Examples are: "RT-xx" RatioTran series, e.g. RT-15, RT26, etc.

"1000" series ratio standards, e.g. models 1000 through 1012

Plus anything like synchro boxes, null meters, etc, and anything weird or unusual from the above manufacturers.

Please contact me with price, condition, model number, etc. Thanks!

I purchased the "B" model(QRO) new in '79. The receiver is nice, but the xmtr drifts a bit, and the audio is prone to splatter, so keep the mic level down. Very easy to work on; all the circuits are on small plug-in cards, and pretty much discrete circuits to each board.

The front panel is plastic,and thin around the top corners. Be very careful when removing the top cover or you'll break the corners out. It is safer to lift the rear of the top cover minimally, and pull towards the rear.

Ok folks, we are not getting any bites at $2400 so we are dropping
down to $2000 OBO for the whole setup, lets see what happens!!

For Sale:

I have a complete Kenwood Ham radio station for sale.

TS-850S Transceiver
SW-2100 SWR/Power Meter (1.8-30MHz)
DSP-100 Digital Signal Processor Unit
MC-90 DSP compatible desktop microphone
MC-43S handheld microphone
SP-31 Matching external speaker
PS-52 Matching heavy duty power supply
PG-2Z DC power cable
HS-5 Deluxe headphones
TUP9D104SE Silver Eagle Desktop Microphone

All in "like-new" condition, only used a couple of times,
all paperwork, unfilled warranty cards and receipts, with
original boxes and packing materials. Nonsmoker. I received
this as a gift and have not used it more than a couple of times.

$2400 or best offer plus shipping and insurance.

Please call collect 305-447-0534 (nights or weekends) for
more details, please try again if answering machine picks up..

Message-ID: <19980307014200.UAA17916@ladder03.news.aol.com>
Source record: 151332

Hey! The output circuit of your rig is a matching network! By the manual quote you gave, it will load an antenna between 50-75Ohms in impediance. If your antenna falls in that range you will not need an auxillary matching network.

I gathered by your quote that you have the manual? If so, follow the instructions therein. Otherwise, here are a few tips:
Turn on the xtal calibrator and tune the dial to it. Peak the S-meter using the Drive control. This will get you very close to the final position for this control.

Use the Tune position. This lowers the voltage to the tube, and allows you to tune with less chance of damage to the tubes.

With the meter reading Plate current, switch to XMIT and use the plate control to tune for a minimum meter reading.Switch to ALC meter position, do the minor peaking that may be needed to the Drive control. No ALC reading? Advance the CARR control to the 10 o'clock position, and try again.

Switch to the PWR Out(RF OUT) meter position, switch to xmit, and tune the LOAD control for max. No switch out of the tune position, xmit again, and redip the PLATE.

That should do it. Let the rig rest between adjustments if its taking you more than about 5 sec. per adjustment

I have owned my for over a year (I own 2 of them). It has been ultra
reliable. The one I use for a base rig is in constant use on both 2 meter
and 440. Other than putting an extra muffin fan on it to keep is from
getting hot on long blab sessions it is great.
Lots of features. I like the remote contro from a hand held which lets
you turn cross band repeat on and of from your hand held.

3716. FS: Two RCA 45 Used Tubes

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-07 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6dqmed$22v$3@csu-b.csuohio.edu>
Source record: 151338

Two RCA #45 used tubes for sale with my actual TV-7D/U's readings/ratings for each tube.

Tube dealers due to large volumes of tubes generally cannot spend the time to give you the actual "performance" of the tube on a calibrated TV-7D/U tester in excellent shape (Please understand your readings can vary obviously). They simply say the tube passes usually and you could get a mediocre pass at best to decent very strong tube with the luck of the draw that's really like a new tube. I have had this experience.

Have rated and priced the following two tubes accordingly:

Tube 1: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 78

Asking price $45.00 or B/O plus shipping. This tests approximately like a new tube in my opinion!!!

Tube 2: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 65

Asking price $35.00 or B/O plus shipping. This is a strong used tube in my opinion.

International buyer welcome.

Thank you.

Just received mine here in New York on Saturday. Very nice brochure. I
am definitely going to wait at least 6 months before considering a
purchase. This radio really needs to get tested out by the ARRL and
other publications. The cooling system doesn't look too impressive. I
heard a rumor that the rig gets hot. That might be the reason why. I
would love to see how it works on RTTY.

3732. Marine SSB for sale - Yaesu FT-180A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-08 00:00:00 UTC
From: nw2m@qsl.net
Message-ID: <6durucctk1@nnrp1.dejanews.com>
Source record: 151055
Cross-posted to: rec.boats.electronics,rec.radio.swap,rec.radio.amateur.equipment

Yaesu FT-180A Marine SSB never installed. With all paperwork and accessories. Microphone and DC power cord are included (never opened!). Manuals are in English and Spanish.

The FT-180 is a rugged, compact Marine SSB Transceiver capable of HF base or mobile operation. The unit covers transmit and receive frequency (simplex or
duplex) pairs from 1.6 to 18 MHz. Power output is 100 watts PEP. Modulation modes supported are JE3 (USB/LSB) and H3E (AM). A built-in fan cools the final amplifier to remove excessive heat. Powered by 12V-13.8V DC.

All controls and buttons have a rubber seal, covers, or grommets to keep moisture and dirt out. This unit will work in a car, boat, or home because of
its rugged design. This rig can be used on other frequencies or bands other than Marine SSB. The manual covers the frequency selection. There are other discussions on the Internet USENET where this rig was used as a mobile radio outside of the Marine bands for public/government service. OK on Amateur Bands.

The transmitter has a temperature controlled crystal oven (TXCO) to keep transmit frequencies accurate. A receive clarifier helps tune in other stations that may not be on frequency.

Units are being sold at South Midlands Communications.

I am looking to sell this Marine SSB radio for $500 US OBO. Shipping weight is 10-12 pounds (4-5 Kg). I will ship and insure to CONUS US states.

A photo can be found at: http://www.smc-comms.com/radios/ft-180a-hf.jpg

3733. *FS: Transportable Cellular Phone w/ 2 antennas*

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-08 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19980308194401.OAA28629@ladder02.news.aol.com>
Source record: 151056

Hey there...

I have a Technophone 900 (clone of a Nokia) Transportible Cellular Phone for sale (or trade). Condition is about 5/10, but it works 100%!! Will work on the Analog (standart 800 MHz) system (both A and B carriers). Includes the Transceiver Unit, the Handset (with the cord), the 12 VDC plug (for connecting a ciggarrete ligher cord), original manual (in both Engligh and Spanish), two antennas, one is the "Rubber Duck" type which connects directly to the TNC connecter on the transciever unit, and a "Trunk Mount" mobile antenna, also with the cord and TNC connecter. Plus I also have some "Programming Info" for it. One more thing, the handset of the unit is damaged abit (there's a scratch going through the LCD) but the LCD functions perfictly. (Basicly only the handset is in rough shape, all else is in great shape.) Makes a great "Emergency Cell Phone" beause you can make 911 calls for free. Asking $30 + shipping. I am in the Philadelphia, PA area.

3734. Yaesu FT-8500 & Aircraft Band

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-08 00:00:00 UTC
From: Jonathan Lorber <jlorber@tsinc.com>
Message-ID: <6dusjj$371$1@client2.news.psi.net>
Source record: 151057

I just purchased a Yaesu FT-8500/FS-10 and have noticed something rather strange. For some reason (unknown to me), when I listen to an aviation freq (128.400 for example), and the AM Receive is OFF, I hear it BETTER than when the AM Receive is ON! Something definitely doesn't make any sense. To top it off, when I am listening with the AM Receive in the OFF setting, sometimes it is still very garbled and unreadable. I'm wondering if the AM filter is bad in my radio.... BTW- it's brand new... Any ideas?

Thanks!

Jonathan

There isn't a "tune mode" adjustment. When in tune mode the screen
voltage on the finals is halved by a voltage divider in the power
supply. What has happened is the divider is open. I am at home and don't
have the designators but look at the schematic for 2 56k resisstors in
the power supply board. If you can't find them then e-mail me tomorrow
and I will look them up.

NO ANTI-SPAM, JUST HIT REPLY.

Hey there...

I have for sale (or trade) a non-working Tempo S-1 HT. This is a 2 meter Synthesized HT. The frequency is set by "Thumbwheel" on top of the HT. The radio is not working, and I do not know what is wrong, it simply won't power up. It comes with the following accessories: 7.2 Volt NiCAD battery pack, battery charger/power supply (2 in 1), "Rubber Duck" antenna, Leather Case, plus the original manual AND the SERIVCE MANUAL with full schematics for the radio. Asking $15 + shipping. I am in the Philadelphia, PA area.

> "Linux is to Windows
> ... as Betamax is to VHS"

U got it!!!
Linux _is_ to Windows what Betamax was to VHS!

Why do you think the majority of images you see on your televsion are
gathered using
GASP .....betacam! Beta was a far superior product to VHS and always
will be.
Marketing and release of the licensing of the format was the secret to
VHS success, not
quality.Marketing is also the reason for success of Windows...._nobody_
would accept
the horseshit brought to you by Microsoft if they were _really_ thinking
and not mindlessly
accepting marketing vs real world scenarios.

Windows is to crashing as VHS is to being "un-broadcastable". They are
both a given.

They say you can't polish a turd. Never tried. But Bill G. is as close
as close can get.

>Given the large size of the power supply 'block' for the VX-1R, can someone
>tell me if the voltage/current regultion to charge the Lithium battery is
>incoporated into the monstrous power supply, or is it 'in-board' in the
>battery/radio?
>
>If the regulation is inboard, then I could use a much smaller power supply to
>charge the batteries, rather than the one supplied with the radio.

In view of the hazards involved in charging/discharging Lithium
batteries, the regulation would be in the radio with hopefully
protection circuitry on the battery pack itself.

The "monstrous power supply" does not appear to have any sophistication.
I'm not sure there is even any voltage regulation in it. Yaesu should
really have provided a switching PSU.

I have successfully used one of those multi-voltage adapters which plugs
into a 12v cigarette lighter socket. It runs at around 700mA and I set
it to 6v. These adapters come with interchangable tips but I had to
search for an extra tip to connect to the VX1. In the UK, both the 12v
adapter and the extra tip is available from Maplin stores.

Hello all,

Thks for reading this msg.

I have the mods for the IC706 MK-II, but I am not sure wheither it goes
for the IC706.
(mods for the MK-II seems to be : "cut the diode D16 on the main circuit
board").

I am looking for the mods for the Icom IC706.
On the main circuit of the IC706, the same-located diode is labelled
D116.
Do I have to cut this D116 diode ?

Thanks in advance for any help.

Cheers, de Eddy - FO5OK

3752. Kenwood TS-50, Feature? Or Fault?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-08 00:00:00 UTC
From: Graham Galbraith <no.spam.graham.galbraith@virgin.net>
Message-ID: <35038997.338B@virgin.net>
Source record: 151075

Hello, thanks for reading this. I've just acquired a Kenwood TS-50
and in the early stages of trying it it I have noticed that as soon
as CW mode is selected, the radio goes into TX.

I was fairly alarmed by this at first but then I calmed down a
little and inserted an unconnected mono 3.5mm jack plug into the
'Key' socket.

Instant cure.

Take the plug out when in CW mode, WHAP, straight into TX mode.

The manual does not bother to explain how a key should be connected
but I am virtually sure it should be normally open, closed when keyed,
so it seems that the socket has an internal short. Looking at the
diagram I see that the socket is pretty complex for something which
theoretically only needs two connections from a push-to-make switch.
The 'Key' socket includes switches, and they are used, according to
the diagrams.

It occurs to me that this is there to provide an easy way to key up the
TX for tuning purposes when using SSB mode, simply by blipping
across to CW mode, which is a one-button press. If so it's a little
dangerous because you only need to select a memory which has
been programmed with the CW mode for the radio to go into TX. I
find this a little bit TOO helpful.

If you have a TS-50 or have used one I would like to know if this
is normal behaviour for the beast.

As a second query, I also got an AT-300 Auto-ATU with the set
and I see that according to the manual, the AT-300 unit is not
suitable for mobile use. Examination of the unit reveals that it
only has a single wing-nut termination for the aerial, so I take it
that the AT-300 is strictly an end-fed wire tuner, and that I would
need the AT-50 if I wanted to drive a coax-fed antenna?

Bear with me: This is the first HF TRX I have ever owned,
so what may be obvious to you is not necessarily obvious to me.

Regards, Graham Galbraith, M0ADR (U.K.)

ALINCO DX77 vs DX70

No six-meters.
No TXIT.
Keyer comes standard (No message memory).
No detachable control-head.
No SSB filter.
LCD and heatsink are the same.
No option for mobile bracket.(Has holes for a bracket though).
No Auto Power Off.
Priced about $200 more then DX70.(Can't be! Ought to check this again)
Price may come down in future but still doubtful whether its worthwhile.

Greetings,
I have two items for sale:

#1) Astron RS-20A; It's in working condition, and cosmetically it's
a 9.9 on a scale of 10. I'm asking $50.00 for it.

#2) Kenwood TH28A; I have the original manual box, receipts and
charger, etc. It's in mint electrically and cosmetically.
The only thing you will probably nead to buy is a battery.
The battery that's currently installed is old and tired.
I'm asking $100.00 for it.

NOTE: Buyer will pay shipping costs....

If you're interested, please let me know.... My email address is:
kj5xf@worldnet.att.net

Regards,
Tony Lyon

Hi Mike,
Good luck on your test. The ARRL puts out two buying guides, called
"Radio Buyer's Sourcebook", two editions are published. As far as
current values, just keep watching current prices in ads on the net. I
found a real nice Kenwood on the net.
Ken

That is NOT normal. Something is wrong.

You are correct on the tuner, it is for a wire antenna.

i have one that is listed here for sale. i took it out of the
plastic and plugged it in.

with NO microphone and NO key plugged in i put it in CW.
it continued to receive. it did NOT go into transmit mode.

sounds like the key plug on yours may be bent inside.

3776. Re: Icom CI-V Interface Programming

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-08 00:00:00 UTC
From: Dave Bernstein <dhb@mediaone.net>
Message-ID: <350225D0.D4C1E17B@mediaone.net>
Source record: 151099

1. The radio sends "OK" or "NG" in response to a "controller-to-radio" message, such as "change frequency to 14150" or "set mode to CW" or "enable dual receive". The controller is typically your PC, but could be another radio on the CI-V bus with its CIV-TRN parameter set to "ON", or a dedicated frequency controller like the "QSYer" that used to be advertised in the back of QST.

2. The radio sends "radio-to-controller" messages in the following situations:

a. If the radio receives a "report frequency" command from the controller, it responds by sending a "radio-to-controller" message bearing the radio's current frequency. The command code for "report frequency" is 3; this doesn't seem to be documented in either the 706 or 775 manuals, and I have a vague memory of writing an application to explore every command code.

b. If the radio receives a "report mode" command from the controller, it responds by sending a "radio-to-controller" message bearing the radio's current mode and filter settings; the command code for "report mode" is 4; this command also appears undocumented in the 706 and 775 manuals.

c. If the radio's CI-V TRN parameter is "on", then the radio will asynchronously send a frequency-bearing "radio-to-controller" message (which I refer to as a "new frequency" message) any time its frequency changes -- which can occur because you move the tuning knob, change VFOs, or because the controller sends a "controller-to-radio" command that causes the radio to change frequency, such as "set frequency" or "memory->VFO". Similarly, C-IV TRN "on" means the radio will send a "radio-to-controller" message bearing mode and filter settings (a "new mode/filter settings" message) any time its mode or filter settings change.

On the surface, it would seem that one should simply set C-IV TRN "on", write a handler for incoming "new frequency" and "new mode/filter-setting" messages, and then implement whatever "business logic" is required to satisfy your control needs. This works ok if you have only one radio on your CI-V bus, and if you are careful to avoid recursion in the case where the radio sends you a "new frequency" message in response to the "change frequency" message you just sent. If you have more than one radio on you CI-V bus, however, setting a radio's CI-V TRN parameter to "on" makes makes it a "master" -- all other radios on the CI-V bus will follow its frequency and mode changes; unless this is what you want, you'll need to configure CI-V TRN to "off" and poll for frequency and mode changes.

In DX-Lab, I configure CI-V TRN "off" and poll the radio every 200 ms., alternating between "report frequency" and "report mode" commands. Even in the pre-compilation Visual Basic days, performance wasn't a problem on a 486DX running Windows 3.1. With compilation in VB 5.0, there is certainly no problem with any pentium running Win95 or NT, assuming sufficient memory. If you're concerned, make the polling interval variable from your app's user interface and explore the limits.

The frequency encoding is 5 BCD bytes, least-significant sent first. If your radio is a 735, or if your radio isn't a 735 but has its CI-731 parameter set to "on", then the frequency is encoded into 4 BCD bytes.

You'll find additional notes and Visual Basic code fragments illustrating the above in http://www.ambersoft.com/Amateur_Radio/Icom_Control.htm.

Have fun & 73,

Dave, AA6YQ

There's also the software Icom was demonstrating at Dayton last year,
ARCP, now available from the page linked to from
http://www.icomamerica.com/amateur/ . Pretty snazzy looking, but it
also suffers from the same ailment all other software I've tried does:
it doesn't store 100% of the attributes in a IC-706 memory location.
If you copy a memory to disk, erase it in the radio, and program it back,
I believe I remember it torching the correct split frequency. So,
probably OK for most HF memories, but totally inadequate for 10M, 6M,
and 2M FM split operation.

Dave Martindale (davem@cs.ubc.ca) wrote:
: rotnappl@ix.netcom.com (Greg Reid) writes:
: >I'm looking for any new or current manufactured HT's (2m/70cm) that use
: >drop-in chargers.

: What exactly do you mean by "drop-in charger"?

: For example, the Yaesu FT-50 by default charges the battery on the
: radio with a wall wart charger. But you can also get a charging
: cup (the CA-15) that you can drop a battery, or radio plus battery,
: into for charging. It uses the same wall wart for power.

: In addition, you can get the NC-50 fast charger plus the appropriate
: cups for the FT-50. That allows you to drop two FT-50s battery packs,
: with or without radio attached, into the cups for charging. It charges
: only one radio at a time, but it will automatically switch from one
: to the other. So you can drop two discharged packs in, and have two
: charged ones in about 2 hours with no further intervention. The NC-50
: is a fair amount of additional money, though - it doesn't come with
: the radio.

: Dave

W&W Associates make two great chargers that will work on a FT-50...a slow
one(3-8 hours), and a fast one (1-3 hours).
Either one is cheaper than the Yaesu stuff.

Try resoldering the connections on that final transistor! If you run
the radio on 12v in the high power position, it eventually will begin
to melt the solder there... and due to partial melting/hardening you
end up with cold/bad solder joints.

The mechanical stress of taking it apart and putting it back together
often fixes this temporarily, but not for long.

I've repaired a number of 202's with this problem.

Paul

3793. IC-706mk2 keying amp problem and spike

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-08 00:00:00 UTC
From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <01bd4a94$77ad4020$6b849cd0@rudym>
Source record: 151116

In the Jan QST review of then 706mk2 a "missing first dot" problem was described and the review also stated that the mk2 was unable to key an external amp relay. Does anyone else experience this problem? What about the mk2 with say the SGC, Ameritron or other 500 watt transistor amps? What about problems experienced with the so called "power spike" referred to in the review. Evidently the mk2 gives out a spike at 100 watts before the AGC reins it in to the set level. The article states that this spike could damage some amps (which ones? it does not say) or trip protection mechanisms in others (the SGC?). Does this occur if using the PTT and ALC lines from the rig to the amp.

Any input would be apprecieated.

Rudy, K8SWD

I have a Kenwood TS-820S with EXTREMELY low
output in the TUN mode. Everything else is working at
specs. I get full out put in CW and SSB.

How do I adjust the TUN mode?

Where is the adjustment?

I can't find a service manual, it is out of print and Kenwood
apparently either doesn't have one, or is not willing to copy
the one thay have as they used to offer.

I need to use this TUN mode to initially tune my amplifier
so that I don't blow something up or scortch it.

I'm at Texas D.O.T. We are having problems finding communications monitors capable of measuring receiver and transmitter capabilities for the new FCC-mandated narrower channels between 50-512 MHz. Our IFR 1200 & IFR 1600 DO NOT work for these channels. IFR says to just measure the audio difference, since they can't get to the exact frequencies. But, we want equipment designed for the newer channels.

Please reply with the note below in mind.

Thanks for your help!

If a beacon is all you want then try one of Radio Shack's (or any other brand for that matter) 1 to 3 channel walkie talkies and just re-crystal and re-tune them for the 10 meter portion you want. You can get creative and gut it out of it's own case for a project box of your choice big enough for a homebrew amp!

Good Luck

Here's the info on opening up the receiver, and making it crossband repeat.

73,
Gary KN4AQ (remove xx's from reply address to reply)

To extend the receiver and open up 800 MHz receive (cellular blocked):

-- Turn off the radio

-- Press and hold the band and squelch buttons.

-- Turn on the radio while holding these buttons,
wait for 5 seconds before you release the band
and squelch buttons.

-- Now the receiver should be opened up as far as it will go.

To enable Crossband Repeat:

-- Set the VHF and UHF frequencies you want to use.

-- "Lock" the radio by holding down the CALL/LOCK button
for two seconds.

-- Turn off the radio.

-- Hold down the SQUELCH button (above the PTT button),
the MAIN button and the BAND button.

-- Turn the radio on while holding these buttons. The "LOCK"
indicator (a key icon in the upper right side of the display)
will be flashing, and the radio will be in crossband repeat.

To disable Crossband Repeat:

-- Hold the CALL/LOCK botton down for two seconds. The "LOCK"
indicator will stop flashing, unless...

-- if the crossband repeater is in use, holding the LOCK button
won't turn it off. If you must shut it off in that condition,
press and hold the SQUELCH button, then hold the LOCK button
for two seconds, and the "LOCK" indicator will stop flashing.

The FT-736 will be replaced by the FT-847. THe FT-900CAT will also be replaced by the FT-847. The FT-900AT used to cost around $1300. Now the Price is down to $1200 and they give you the Collins SSBfilter, 500HZ CW Filter, plus the separation kit for free. It is a decent value. I am hoping perhaps another $100 dicount in 2-3 months on the last ones in stock. The FT-847 may cost as little as $1600 but also has 6/2/440/DSP.

Personally the 847 cannot replace the 900. They are two totally
different radios. I am surprised that Yaesu is not coming out with an
updated 900, perhaps something with DSP and a few IF filters, and perhaps
dual passband tuning like the old 757 had. It would be a pity if they
didn't replace it with something similar. Furthermore, it would seem to
me that, if they don't replace it, Yaesu just rolled over to the 706,
which is its only competition. The 847 is too large, unfiltered in the
IF stages on SSB (to my knowledge), does not have an internal tuner
(which greatly facilitates operation, especially mobile, but I'd like to
see what that new antenna they have will do...and if you can change bands
remotely), and does not have a removable faceplate (although they might
do an 8000/8100 disappearing act trick...8000, what 8000 :)
Hey, has anyone tried to sling a radio as large as an 847 (and let's face
it folks, it ain't big, but it ain't small) from the passenger side dash
of, say, an Integra, or a Civic..... I hope your girlfriend has short
legs...)

ANYWAYS, that's my opinion....

Pete -- KA2YDY

PS- After a life of being a Yeasu only operator..... My Kingdom for an

That doesn't make a lot of sense. The FT900 is a great mobile rig. You can put the rig in the trunk and the faceplate on your dash and use the built in antenna tuner to extend the useable range of your mobile antenna. The FT847 has neither a detachable faceplate nor a built in antenna tuner. A lot of us hams could care less about 6 meters and up especially in a mobile rig, and don't want to spend extra for something we are not going to use. I wonder if Yaesu is going to update the FT900 and add DSP and possibly six meters. Just my 2 cents. ---- Steve N9ROU

I would highly recommend that you consider a crystal controlled unit that
you dont mind ripping into for beacon operation rather than consider a new
radio for beacon service.
An even better radio for beacon use is to find an old cb/car alarm that
sends out tones to a pager. These units have no receivers in them and have
a limited number of parts to remove to make them into beacons. They can
be had at hamfest and
flea markets for only a couple of dollars at the most since they cannot be
used at cb's
and run 4 watts on 11 meters. Best of all they are so simple that you
really dont need a schematic to figure them out!
I aquired one of these units for my beacon. I removed the audio amp.
The modulation transformer was also removed and replaced with my keying
transistor so it only keys the driver and final. I separated the b+ out so
that the osc circuit runs continously.
I only had one crystal to deal with and so there were no switches or
contacts to mess with and added a small variable cap to my crystal so that
I could compensate for aging of the crystal. Tuneup to 28.215 Mhz from
27.195 was too easy.
I also added variable supplys so that I can control my power output. I run
1 watt so
I reduced B+ voltage down but would have no qualms running it up to 5 watts
(my unit will get to 7 watts @ 14.5vdc).
My beacon has been on the air continous with this transmitter since July 96
on 28.215 Mhz from Champaign, IL with no problems encounted. Before that I
used a home brew transmitter that used a 7400 IC and two 2N3904's as finals
that ran 250milli watts but that is another story.

David,
Perhaps you don't understand how the GEET works. It is not using electrolysis
to split the water and use it. You simply run it in the tank like gasoline.
Even if the mileage would go down, (it should actually increase) it would
still be acceptable as water is still essentially free.

I believe so, but don't remember the color code for certain (I don't
own a 220 version). I wouldn't count on mine having the right color
heat-shrink, since they were engineering models.

Thanks for that, several people have confirmed that there is a fault condition on the radio and we all agree that the socket itself is the likely cause.

Since you've obviously done the job before yourself can I ask if there is any 'trick' method for getting at the board on which the socket is mounted, as I had a preliminary look at it tonight and it is buried three deep inside the rear heatsink, it looks a real nightmare job to get at.

Secondly, the socket looks unusually complex with a second set of contacts in it (according to the diagram) and I doubt that I can just buy one off the shelf, so where do you get them from, and:

What exactly is the 'wrong' jack plug to plug in? Surely all 3.5mm jack plugs are physically very similar? I would hate to replace the socket only to wreck it again.

> Nathan

Thanks for your helpful comments Nathan. Not sure what you mean by full HF TX capability, I assume it already provides 100W on all the bands I'm licensed to use. For the time being I'm also quite happy with 100W.

I do have a manual ATU myself (SEM Z-Match) but it would have been nice to have been able to utilise the Auto-ATU with a coax-fed balanced antenna like (say) the G5RV.

Hi again Bob,

I forgot, on manuals: try HI Manuals. They are advertised in CQ and
QST I think. Never have been impressed with Kenwood's factory
support organization, from high prices and horror stories I have heard
over the years. Fortunately, the TS820 is not only rugged, it is
REPAIRABLE.

One man's fault is another man's feature. Consider that if you're using an external antenna tuner or tunable mobile antenna, you might want to be able to easily get a carrier to
tune on. This "fault" provides that "feature". If you're using CW, insert a key.

Hi Bob OM,
Probably just an open resistor in the screen voltage divider,
which sets the power level for tune. There is no adjustment.
I never use tune mode on my TS820. Just tune it up per normal,
nothing will blow up. Trust me, I been using mine for 18 years
now (still original 6146's; they can last a lifetime with care)!
You can also use the FSK position,and tune it up for about 110
mA plate current, about 40 watts out. The rig has auto power reduction
for FSK operation. It is an excellent rig for all modes, including
AMTOR/PACTOR/RTTY. I would not part with mine.
Vacuum tube finals are not persnickety like solid state ones,
(damned hard to short the 'collector' to 'emitter of a 6146). The
pi network output allows vastly greater tolerance of (and matching
capability to) high SWR loads than the auto-shutdown SS final amps.
Enjoy!

3871. FOR SALE: KENWOOD TS-820S W/CW FILTER

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-09 00:00:00 UTC
From: wa6gsd@ix.netcom.com
Message-ID: <3504B5A6.3B8B@ix.netcom.com>
Source record: 150971
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.misc,rec.radio.amateur.equipment

I have for sale a very clean, full output Kenwood TS-820S transceiver
with optional CW filter installed.

For those who are not familiar with this unit, it is a fully self
contained 100 watt transceiver covering 160 to 10 meters, SSB or
CW. This unit does not have WARC bands or gereral coverage receive.
It operates from 110V AC and has all power supplies built in.

The unit has digital display (green flourescent) and is all solid
state with the exception of a PA driver tube and a pair of 6146's
in the output. THe unit has Pi-net output, meaning that unlike newer
rigs with a fixed 50 ohm output, will match antennas having impedances
of 50 to 75 ohms.

Asking $350, and I Am located in Southern california.

Any questions, just ask..

Thanks for reading.

Steve-WA6GSD

3872. Kenwood IF-232C Interface

3873. Can the Tektronix TDS 210 replace an analog scope?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-09 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <6e2n00$bv0@redgreen.cs.ubc.ca>
Source record: 150973
Cross-posted to: sci.electronics.equipment,rec.radio.amateur.equipment

For many years, I have had a Tektronix 2215 60 MHz analog scope. It was my first "real" scope, replacing a Heathkit that was not much better than a toy. It has served me well over the years.

But I've been eyeing the TDS 210 since it came out a year and a half ago. It seems like it does everything that the 2215 does, and considerably more. It's also a quarter the size of the 2215, so it will fit on my desk where it will be available for use, rather than stashed in a closet to be brought out only when no other instrument will tell me what is going on. It has plenty of sampling rate for its bandwidth, so it seems that it will never revert to "equivalent time" digital sampling.

So, my question: If I buy a TDS 210, can I get rid of my analog scope entirely? Or are there still some things that analog does better? (The 2215 is pure analog - no cursors, no character generator for on-screen readout, no voltmeter. All measuring is done with the graticule and the calibrated B sweep delay knob).

Also, how hard is it to get waveform data out of the scope via the serial port on the communications module? I know Tek sells software for this, but I also see a programmer's manual listed. Is is practical to read out the waveform data using self-written code, say on a Unix machine?

Finally, I see Tek has announced the TDS2MM "measurement module". This has the same three interfaces to the outside world as the communications module, but also adds FFT analysis and a few other automatic measurements. I can't find any detailed information on it on the Web, and the local Tek distributor doesn't have the module so I can't just go there and read the manual. Does anyone have this module? Does it work well? (It's $500 US, so it's a lot of money).

In article <35038830.36B5@virgin.net>, Graham Galbraith <no.spam.graham.
galbraith@virgin.net> writes
>Hello, thanks for reading this. I've just acquired a Kenwood TS-50 and
>in
>the early stages of trying it it I have noticed that as soon as CW mode
>is
>selected, the radio goes into TX.
>
SNIP

This is not standard, I often use CW mode to tune my manual atu, and my
TS50 does not TX until you press ptt or hit the keyer.

>As a second query, I also got an AT-300 Auto-ATU with the set
>and I see that according to the manual, the AT-300 unit is not
>suitable for mobile use. Examination of the unit reveals that it
>only has a single wing-nut termination for the aerial, so I take it
>that the AT-300 is strictly an end-fed wire tuner, and that I would
>need the AT-50 if I wanted to drive a coax-fed antenna?

I decided not to buy the auto ATU because it can't tune the bits of wet
string I connect to it, but a manual ATU can. I use a Vectronics VC300,
which performs well.
>
>Bear with me: This is the first HF TRX I have ever owned,
>so what may be obvious to you is not necessarily obvious to me.
>
The TS50 is also very easy to modify for full HF TX capability, and if
using a manual ATU can also be tweaked to deliver much more than 100W on
SSB.

>the radio was cruising along.

I would think the same, but I have repaired over a dozen different
HTX-202s that had no transmit (or transmit at ~1 to 5 mW) by
resoldering those connections on the PA transistor. I've also seen the
same radio come back for the same repair the second time, so it
appears not to be simply a problem with the original soldering job. On
all the 202's I've found this problem on, the owner said they had been
running it extensively on hi power using 12 or 13.8V.

However, as you say.... I have no idea how this can be happening!
Several owners did report the case was too hot to touch and they had
to lay the radio down and use a speaker mic.... but as you say, it
takes a LOT of heat melt solder! It remains a mystery to me.

>A very common problem with these radios is that the wire from the RF circuit

YES!! That's true too. I had almost forgotten that one, but have seen
it a number of times as well. Good point!

Unit is All Solid State and very clean... 73 de Jordan...

3897. Exciter/Amplifier Question???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-09 00:00:00 UTC
From: kc4pe@mindspring.com
Message-ID: <35040f5c.2405879@news.mindspring.com>
Source record: 151010

I understand that if a mis-match occurs between the exciter and the amplifier, strange things (RFI Wise) can happen!!

I measure a 1.9 SWR between my Kenwood 950 and my Alpha 76PA, I was told to do one of two things.

1.- Insert a 5" coil of RG58, 29.5 feet long between the two units (Why 29.5 feet???)

2.- Insert a small Antenna tune between the two and tune for a match of 1:1.

My problem is that when I TX and ,monitor my audio, it changes complextion/tone every time I key up. But when I shut down the Alpha all is OK!! It doesn't matter whether I'm into an antenna or a dummy load!!

What is the correct fix, or what should be between my kenwood and Amp???
Thanks,
Bill

I like mine. IF DSP would be nice, but the AF DSP is still pretty adequate for my needs. Better than no DSP by a long shot.

The noise reduction feature is amazing. It makes a great RTTY rig.

My only real complaints:
1) The memory battery fails in about 6 months. Supposedly if you replace it correctly it will last longer. Hopefully Kwood has fixed this in later releases. You can find out about how to change the battery on my web site: http://www.al-williams.com/wd5gnr

2) Would be nice if you could put in more than one IF filter. However, with the DSP, there is less need for filters than you would think.

3) The PC control software isn't really as useful as you would think. I'm not sure if that's the software or just an indication about PC control in general. I have programmed the radio myself, and it is useful for certain things, but having a mock up of my radio front panel on my PC doesn't do anything for me. Your milage may vary.

However, that being said, I really like the radio. It is easy to use and I get many comments about my high quality audio. The speech compressor seems to really make a difference in working DX. I have a less than optimal antenna setup, but I rarely have to call a DX station more than 2-3 time if I will be able to work him at all.

I have heard, but not verified, that if you are using the computer interface, the built in keyer can get confused.

Yes, I do have a manual. But my copy shop wants at least $ 50 to $ 60 to copy,
since it contains various sizes pages, which are all double sided.
They can not use their automatic copy machine and have to do everything by
hand. Especially since the pages are folded.
Plus, there would be a cost to drive to the copy shop to deliver and another
trip to retrieve. All in all, it would be cheaper to buy a new manual.

Common fault here! the socket is shot, replace it!
The switch contacts have had the WRONG 3.5 mm jack inserted in them, I
have seen this a dozen times or more.

It is called thermal runaway. As a bipolar transistor gets hotter, the current through it will increase, causing it to get hotter, which causes the current to increase, and so on and so on until something lets go. Often what lets go is the aluminum metalization on the silicon die. But other times it is a bond wire that fails, or even the solder joints to the leads. The latter is rare in my experience since it is further from the source of heat than the metalization or the bond wires.

Hi There.

Looking for a mod to give the ICW2E out of band transmit.
I know that the set can be made to receive wide band by software and
also be set up as a repeater by software (IE Keypad).Is there one for
transmitt? Either By the keypad or a Hardware mod.?

Cheers

Most likely, the mod for the W2A will work...do a search.
You need to remove one duo-diode, and install 2 others.
The above is done on the logic board.
Be careful....the parts are surface-mounted, and INCREDIBLY small!
I modded my W2A some years ago, and have had no problems-but I used a VERY fine-tipped grounded soldering iron, a lighted magnifier, tweezers, and pins as positioning tools.
After you do the mod-reset the radio-if it won't reset right away, put 12 volts on the unit and try again.
On mine, it refused to reset with 7.2 volts-it needed 12 volts for the initial reset.

3930. HP & Tektronics Test Equipment Reference

Newsgroup: rec.radio.amateur.equipment

From: KF4KJF@qsl.net
Message-ID: <3505347c.3461248@news.icanect.net>
Source record: 151156

Hi All,
I just got an Icom 706 mkII, I use it mostly on 2 meter FM right now. I needed to use the narrow filter on receive, since we have 15 kz and 50 mile spacing here in South Florida. When I started using the new 706 I notice the N light staying on, during transmit! Sure enough there is a noticeable difference in the audio, filter on or off. Its a negative difference. So do not save transmit Narrow filter settings in a memory. You'll be hard pressed to figure out why your not getting enough audio!! Anyone figure out more??

Message-ID: <01bd4b08$db0e2200$7eeeffcc@n4lq.iglou.com>
Source record: 151167

Hey......that spike helps bust through pileups. You don't need an amp now.
What we need is the mod that puts a spike on every character. Let's
see.....If 10 watts gives us a 100w spike then 100 watts should yield a
1000w spike. Maybe this thing was designed by a radar technician. I like
mine though.

> In the Jan QST review of then 706mk2 a "missing first dot" problem was

Hi all,

I had the instructions to adjust the audio lever and the High/Low
power output at one time but have lost them. Can anyone help me here?

I own a Radio Shack HTX-212 2-meter mobile radio. I accidentally activated the Channel 1 Alarm feature (the little bell symbol is displayed and the radio beeps every four seconds).

Pages 16 and 30 of the user manual mention the feature, but don't clearly tell you how to deselect it. Does anybody know how to turn this feature off?

I hv similiar problem in my TM-732A. I found that it happen in HI power while the HT is warm up.
The power will drop off / on continuesly even you press the PTT without release (i.e. like flashing on/off transmit power). In the rear of the HT, the cool fan cannot work. but it only work if you change to Medium power (Thats mean that the cool fan will resume normal after Medium Power transmit a while). Does anyone can help me to solve this problem ?

3955. Can The Eagle Sidewinder 400 be Modified?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-09 00:00:00 UTC
From: Michael1998@webtv.net
Message-ID: <6dvtij$s8f$1@newsd-112.bryant.webtv.net>
Source record: 151179

I have been thinking about purchasing the new Eagle Sidewinder 400 10 Meter mobile radio. Does anyone know if this rig can be modified to cover the entire 10 Meter ham ban? It looks like it has all of the modes available, such as SSB, FM, but the rig only cover the tech portion of the band straight out of the box. It looks like this radio could be easily "opened up" to include the rest of the 10 meter band, even up to as high as 30 MHz. Is anyone out there familiar with this rig and whether or not it can be easily modified such as the Ranger 2950 and some other mobile rigs can? Any help would greatly appreciated! Just e-mail me and let me know.

Hey Eric, there is a company called World Xpress or something that has
a repeat guide for western states only. I bought it about a month ago
for $4 and the company waived shipping charges. I dunno if they have
any left or not but here is their page: http://www.rotd.com/worldxn/
They had another repeater directory but I don't know the details.

Why not sell both and get a new ICOM 706 MKII with DSP? That way
you have a radio that is under warranty and will give you all
the features that are important to you, more bands, smaller
size, and great resale if and when you decide to migrate again.

Why do you think they have a tune mode? Very stupid question why is the
output EXTREMELY LOW. You don't operate it in the tune mode. You tune it.

: the FT-50 web page.

: Richard, KF4PFE

Only the RX mod can be done with s/w-if he wants the extended TX, he still
has to mod the h/w(very simple)-so if the poster wants the tx mod, then he
may as well do the other mod in hardware(almost as simple as the tx one).

Hi all

I bought my VX-1R in W6 and cannot use the 110V AC adapter here in Europe. So I took it apart. Took me a while to draw the schematics. Have it as GIF file at home. If interested, let me know and I'll publish it here. In the AC adapter there is both a voltage regulation and a current limiter (around 600mA). The LiIon battery pack itself includes some circuitry to switch the charging current on and off. That's what you hear as clicks out of the speaker during the 2nd half of the charging process.
Don't forget the VX-1R draws 0.7mA even when the unit is off. So after a month of inactivity the battery will be empty! BTW, there is a lot of VX-1R info in the German PBBS network.

3966. Kenwood TMV7 TXRX <-> LCD serial protocol

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-09 00:00:00 UTC
From: marc@aargh.mayn.de
Message-ID: <PSVZB*Mqh@aargh.mayn.de>
Source record: 151190
Cross-posted to: sci.electronics.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.misc

Since quite some time I'm trying to remote-control a Kenwood TMV7 radio transceiver.

Unfortunately the mike buttons can't access all of the TMV7 functions. Even worse, the default state (eg after a hard reset) is "no DTMF mike" - so I can't turn on mike buttons from the mike. That's it about the mike, I can't use it for the project.

However, the display ("LCD assy") is connected via a 4 wire cable. The pinout is

1-PSI (serial LCD -> TXRX)
2-PSO (serial TXRX -> LCD)
3-PE (gnd)
4-PB (+13.8v)

So it should be possible to (fully) control the transceiver via this connector.

According to the service manual, the communication is async 3125 bps.

However, the bit timing is 58us (measured with osci), resulting in a rate of 17240bps. If the manual meant BYTE per second, each byte must have 5.5 bits :(Doesn't look too familiar.

I built a receiver circuit, which turns 17240bps raw data (without stop bits) into 57600bps 8N1 for reception on a PC.

I can clearly see the activity when pressing buttons, but there's a lot of traffic. I can't figure out how the buttons are encoded.

Pressing buttons that affect the display output produce far more data than others (although I'm looking at LCD -> TXRX direction). Obviously there's some acknowledgement or repetition of received data.

I never get the same two datasets when pressing the same button twice.

Twice a second, the TXRX sends an "E0" (I interpret data as LSB first, 8 bit into one byte, sync to the first bit of a block, and a block lasts until there's 80 bits of inactivity). The LCD answers with "E8". This checks wether the LCD is still connected.

Here's what I receive when turning the volume knob (dig poti, no display activity):

E8 (LCD still there)

```

I see a lot of F's, indicating I might oversample the signal. However there are sequences of only one same bit (as in a7), and the shortest interval I measured is what I used as bit time.

The signal looks very fuzzy on the scope, and I can't imagine it can keep sync for that long. It even looks like it is doomed to loose sync after 2 or 3 bits. And there's no regular frame structure like in 8N1 transmissions such as RS232. (I don't think Kenwood uses a PLL to recover bit timing for a 0 to 7 meter digital 0V/5V transmission) :-)

This is my problem, can you help me?

Maybe Kenwood uses this or similar protocols in other products (eg car stereo with display)? Have you seen any Kenwood protocol before?

Every small hint might help.

Are Kenwood service manuals trustworthy? Ie can I rely on the comment about 3125bps and assume there must be some kind of modulation? (Maybe Kenwood does not send a bit as high/low, but as levelchange/nolevelchange? Or even a more complex modulation?)

What experience do you have with Kenwood service manuals?

<snip bit about IP>

At what stage did I suggest that the modification was correct. ISTR
saying something about properly documented and done properly....

I have no knowledge of the TS-50 , the point I was trying to make was
that radio amateurs should be willing to research and modify *if they
want to*

or does that go against the grain for those that make their living by
buying,selling & modifying amateur equipment?

>As for wideband tx there is no need to do this to use the radio as an
>IF, modify the Transverter to have an IF already available on the Radio!

Dont talk rubbish Geoff, some of the coverage needed on the higher bands
is wider than a suitable amateur band allows, It can cause a fair bit of
frustration if the mast head translation stage drifts a couple of
hundred Khz below the HF band edge.

Yes the translator can be band switched but this can cause reliability
issues particularly when remote switching is concerned.

>Modifying the radio for w/b tx can cause serious problems like
>confiscation by the R.A, (check Radio Active Magazine, March 1998)
>Finally, for those smart A.....d guys out there who have modified their
>radio's for W/B TX just think!

I guess they could confiscate my Racal HF kit as well, ISTR that it will
TX all over the place........

> In several cases that I have seen the
>bandpass filter network will not stand 100w on the wrong frequency,
>either the filter network burns up, or in the case of Icom Radio's the
>PA's blow, and that will cost you dearly!

Only because that modification was not thought out properly.

>My answer is don't even THINK about it.

Or rather , THINK about buying another black box perhaps?

Regards

3975. Couple of notes on FT-50

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-10 00:00:00 UTC
From: "Jose R. Camara" <camara@quantacorp.com>
Message-ID: <3505CD10.CD6D853D@quantacorp.com>
Source record: 150852

A couple of notes on the FT-50... Very disorganized, bu I better post it before I forget it completely.

Bought one in December, serial 7F20xxxx. Software mod works fine, but I liked better the ability of changing country settings with a few keystrokes, so had to remove the R2048 resistor.

First comment: 1.the 'resistor' is a 0 ohm one, simply a jumper, actually jumper #4.

2. The jumper status is what is read into the rdf or tpl files position 5E2, before current_band. 0 is a closed jumper, 1 open. 03 = 00000011 (my original setting) shows r2048 installed (bit3), jumper 1 closed (bit2), jumper 2 open (bit1) and jumper 3 open (bit0). After removing r2048, it reads 0B (00001011). I didn't remove the solder jumper because I don't need a reset to go into freeband, I actually prefer to have reset restore the U.S. bands.

3. Extended Xmit: On a dummy load, I obtained the following (internal power limiting setting adjusted for 5W, external power supply):

F P I F P I
(MHz) (W) (A) (MHz) (W) (A)
119.88 0.78 1.78 309.35 0.6 2.15
120 0.8 1.78 310 0.6 2.13
122.5 1.4 1.76 320 1.2 2.15
130 4.0 1.51 340 2.4 2.07
140 5.0 1.51 360 3.8 1.49
150 5.0 1.36 380 4.8 1.31
160 4.8 1.21 400 4.9 1.27
170 4.6 1.17 420 4.9 1.32
180 3.6 1.10 440 5.0 1.35
190 3.2 1.09 460 5.0 1.36
200 2.4 1.32 480 4.4 1.29
205 1.5 1.58 500 2.8 1.60
207.5 0.8 1.51 502.8 2.7 1.68
210 0.3 1.40
220 0.0 1.35
230 0.0 1.45
231.1 0.0 1.49

The extreme points are the absolute boundaries for my radio, a few kHz out of those the radio will transmit for a split second and ignore the PTT button. Seems like an unusual situation is detected internally and the CPU stops transmit to protect the radio. There is a temperature sensor, perhaps that's what triggers it. Anyway, at the edges the efficiency is really low, as current consumption is still high with little power actually making its way out of the radio.

4. Antennas. Tried original, Premier RD-98 (17" very thin and flexible) and Diamond SRH805 (1.8" baby-type). The RD-98 improved reception of weak signals, including 800MHz, but didn't improve much transmission. I could hit a local repeater using a tiny bit less power, but for that reason it wouldn't be worth the money and the sometimes inconvenient length. It showed 1:1.2 over 144-148, better than original antenna, but much worse on 440. The original antenna was a better balance between 144 and 440. The tiny SRH805 is really disappointing when compared to the others (no miracle here...), but is good enough to make the radio very small together with a FNB-40H Maha battery, provided you know beforehand that you can achieve the range you need (skiing use).

5. Batteries. I have the Yaesu FNB-41 (9.6V 600mAh) and a Maha FNB-41H (7.2V 650mAh). I like the slim one, without the bulky Maha belt clip, for portability. The radio still puts out 3.6W with it.

6. Power output versus DC voltage. Setting HIPO to 255, I measured the minimum voltage to obtain certain power levels:

F=144MHz F=440MHz
P I E I E
(W) (A) (V) (A) (V)
0.5 0.57 3.6 0.56 3.6
1 0.73 3.9 0.8 4.9
2 1.0 4.9 1.13 5.9
3 1.2 6.0 1.38 7.2
4 1.38 7.0 1.58 8.3
5 1.52 7.8 1.69 9.0
7.5 1.77 9.1 2.03 11.0
10 2.02 11.1

Although you can obtain much more than 5W from the radio, I wouldn't set for more than 6 or 7W, because the radio may overheat and fry during long transmit. I only tested for a couple seconds. The Maha battery, fully charged gives 8.3V during receive, 7.0V during tx, 4W VHF, 3W UHF.

7. Internal settings. Set VFO A to 144, VFO B to 440 (or valid vhf and uhf frqs), turn radio off, hold lamp,ptt and knob pressed while turning the radio on brings up the internal settings menu. Some parameters are set with the rotary knob, others will self-adjust in the presence of a proper external signal. It is advisable to write down the original settings before messing with them. There is a separate set of parameters for the VHF and UHF bands. Selecting VFO B with a UHF frequency while VFO A has 144, powering down and up with the lamp,ptt and knob pressed will bring the UHF set. Settings are only saved if you exit this mode by holding down the knob for a half second. To exit without saving, turn power off.

BAND - shows current country setting (A1 or A2C for U.S.). Can be changed by clicking the knob down quickly and then turning the knob to select A,B,C,D,H,Free bands. IMPORTANT: if you exit by pressing the knob more than 1/2s, all memories (and other settings) will be erased. To preserve them, change the band by turning the knob, tap once on the knob to accept the new band and exit by turning off the radio and back on. This paramenter is only manually changeable if resistor R2048 has been removed!

HSSQ - squelch hysteresis setting, originally was 0, after a factory repair they reset it to 5. Can be set manually with knob. Don't know exactly what it does, from the name should be something related to the level at which the squelch closes (mutes) after being open by a

signal.

THSQ - squelch preset threshold. This is one of the settings that cannot be set manually. If you tap the knob button, it will change very fast depending on the signal at the antenna. At this point you would apply the correct signal to the antenna and tap again on the button to set it. DO NOT TRY TO CHANGE IT! If you get into the setting mode by accident or curiosity, simply turn off the radio and the new setting will not be saved.

TISQ - squelch preset tight - no idea of what it does, but also needs external signal to adjust. Leave it alone.

S1LV - also adjusted by external signal, but this I encourage you to mess with. It sets the signal strenght corresponding to S-1 in the S-level meter. First, tapping on the knob will give you a nice numeric signal strenght meter, great to compare antennas on a distant HT, for instance. Exit without saving and no harm is done. It is easy to find a weak signal on the air, and then by bending my RD-98 antenna get whichever setting I desire. Using the regular antenna you can also obstruct it to get different readings. Or you can make your HT match S1 and S9 of another radio, by finding an appropriate S1 and S9 off the air signals.

S9LV - same as S1LV, for S9 reading
HIPO - high tx power. Can be set manually, and pressing PTT while in set mode actually transmits, making it real easy to achieve a desired power level. Actual settings for different power output will depend on individual radio, but for what's worth here is what mine gave:

F=144MHz F=440MHz
P(W) HIPO uHIPO
0.1 23 19
0.5 41 34
1 57 47
2 84 70
3 108 86
4 130 103
5 149 118
6 163 131
7 147
10 230

L3PO - L3 tx power, similar to HIPO
L2PO - L2 tx power, similar to HIPO
L1PO - L1 tx power, similar to HIPO

In my radio, I use L1PO to 0, and associate it to some memories to prevent me from accidental transmissions.

Here are my original settings. Note that each individual radio would have different settings. This is the modern version of factory-adjusted trimpots.

BAND A2C A2C
HSSQ 0 0
THSQ 132 129
TISQ 77 80
S1LV 116 134
S9LV 208 223

HIPO 142 122
L3PO 98 86
L2PO 52 47
L1PO 16 14

8. Power button. Yaesu has now a lower profile power button that won't turn your radio on by accident every time you put in your briefcase or pocket. Seems like they are mailing it out for free. It is also easy to open the radio, remove the button, cut it right below the top, make another parallel cut 1/8" below and glue the top back on, giving you a lower button with the power inscription as original.

Well, this is enough for 'a couple of notes' :-)

3979. HTX-212 close-out

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-10 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6e2q9u$22k@news.Hawaii.Edu>
Source record: 150856

I was able to get the very last HTX-212 in Hawaii at RS's close-out price of $69.95. Now that I've got this I can retire my Regency and Heath crystal-control rigs.

Has anyone encountered any design faults or difficulties with this transceiver? One thing I already don't care for is the low power setting: 10W (draws 7A at this "QRP" level); I'd like to get that down to 1W. Examining the schematic I can't seem to find any way of varying the low power setting. Any hints?

Thanks in advance,
Jeff KH2PZ

Joe,

This may be idiotic, but have you checked that the 706's CV hex
address is the same one the program expects? You set the 706's CV
address during the default (power up plus lock, I think, don't have my
manual here at work) configuration menu. I'll bet the program assumes
the 706 is set to a specific hex address on the ICOM CV bus (even if
you are using a direct PC->706 cable without the expensive ICOM CV bus
adapter). If the 706 and the program's assumed command destination
address do not agree, the 706 may not listening to commands which it
thinks were issued for some other ICOM radio on a different hex
address on the shared CV bus.

They advertise routinely in QST. I have not seen them in any of the
standard Ham Radio catalogs (HRO, AES, etc.).

There is brief on-line press release at:

http://206.13.40.11/1996/dec/ldg.html

The full LDG Web site is:

http://www.radix.net/~ldg/

I have the 100 Watt automatic AT-11 tuner kit, which I have not
assembled yet (lack of time, my job keeps interfering with my hobby).
The AT-11 kit is of very high quality. I bought the enclosure as
well. It, too, is very well fabricated. The PC board is very well
fabricated. The directions are very clear. My buddy has the QRP kit
which he has assembled and uses.

LDG's Web site has the assembly manual on line as a PDF document.

QST did a full 5 page review of the LDG, in the January, 1996 issue.

George,

That is the crux of my problem. I can only get about 1 to 2 watts out on TUN.
I have gotten info from this post that leads me to go look for a pair of resistors
that get switched into the screen grid circuit in the TUN mode. Then I can get
it back to where the level ought to be. If I had 20W I'd be very happy. It is
apparent that it is sick. Now I'll get it well.

I also located a source for a service manual. A money order is going in tonight's
mailbag from the right coast to the left coast.

For a lot of the rest of the folks; I know how to tune a rig. Been at it a little while,
something around twenty years. I have never had a solid state HF rig. I have
used a few. I prefer my tube finals, Thank You.

Looking for info or better yet a home page some where that I could take a look at this radio.

Otherwise what features does this radio have, I don't know anything about this rig but I have found one for a reasonable price.

Prefer info from some one that currently is using one, but all comments are welcome.

3995. Re: Can the Tektronix TDS 210 replace an analog scope?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-10 00:00:00 UTC
From: Alan Wolke <kc2bog@worldnet.att.net>
Message-ID: <6e51ge$jbs@bgtnsc03.worldnet.att.net>
Source record: 150872
Cross-posted to: sci.electronics.equipment,rec.radio.amateur.equipment

Dave,

The answer to your question (above) is a qualified "it depends". The TDS210 is a real nice little scope. It does have sufficient sampling rate to not use equivalent time sampling. In fact, there is no way to make it do anything but "real-time" sampling (unlike the higher end Tek digital realtime scopes which allow you to choose between these sampling modes). You do still have to watch out for aliasing at lower sweep rates, since sample points between display points are decimated, unless you choose "peak detect" mode.

One thing that will be different between the 2215 and the 210 is the re-arm time. Analog scopes have a MUCH faster re-arm time (minimum time between triggered sweeps) than DSO's. The display on the 210 is an LCD, and doesn't have the viewing angle of the analog, and the contrast adjustment is done in steps (not vernier). However, it is very crisp and clear.

The added features that you get with the DSO in terms of automatic measurements, computer interface/control, etc. etc., may outweigh some of the little gotchas with a DSO.

The module that you mention includes FFT, addition measurement options, and GPIB, and serial and parallel ports (may be mistaken on the the other port types besides GPIB). Whether or not it is worth it entirely depends on whether or not you need these features. As for ease of interface and waveform transfer, I can't help you there. I haven't had need to interface this model to an ATS.

Tektronix is really good at providing demo units if you are serious about buying. I'd suggest looking into getting a loaner for a few days and put it through its paces. IMHO, Tek makes great stuff, and the scope is useful for what it is, and you can't beat the size (unless you look at the handhelds).

3997. Cushcraft ARX-450B tuning

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-10 00:00:00 UTC
From: "Matthew W. Steger" <n3ntj@erie.net>
Message-ID: <35060A7B.DE90AC16@erie.net>
Source record: 150874

Hello all..
I have a question concerning the tuning of a Cushcraft ARX-450B (440 ringo ranger). I have one constructed and am trying to tune it for repeater use (@ 444.0 MHz). Using some new Belden 9913, good silver teflon connectors, and a Bird Wattmeter (along with a GE 100W UHF Amp), I am trying to determine why my tuning procedure seems to not work. With an output of about 50~65W, and sticking a 300W MFJ dummy load at the end of the coax (L=30'), I get results that I'd suspect..less than about 1W reverse (for a good SWR of less than 1.2:1) across the bandwidth of about 438~450MHz.
When I put inline the antenna which is not close to any metal objects, I am able to measure forward and reverse power and document it in a table. As I keep track of reflected power, I can see a fairly low reverse power @ 438MHz of about 1~2W and calculate SWR.
The ARX-450B seems to have only two methods of tuning. First, there is the tuning stub about 1.5 ft below the top. This short act as a shunt between the top and bottom of the antenna. Sliding this shunt in and out in small increments is how I started to tune the antenna.
After I noticed that I wasn't getting far, I started to also adjust the length of the piece of antenna which is hose clamped at the piece's bottom. Loosening this hose clamp, allows the peice to be moved up and down (effectively shortening and lengthening the antenna).
As I see a low SWR near 438MHz, I shorten the antenna and can see a low SWR appear @ 450MHz.
If I slip the length of the antenna back longer slightly to about where I'd expect 444 MHz to be, I can calculate only about 1.5:1.

Formula: SWR = [1 + ((ref/forward)E+1/2)]/[1-((ref/forward)E+1/2)]

Note: the "E+1/2" means that the parenthesis is raised to the 1/2 power or in other words, it's square root is taken.
Also, I have a Micronta dual band SWR/Power meter which is not exact but is close. My calculations using the forward and reverse power readings from the Bird Wattmeter and the readings from the Micronta SWR/Power meter are very close.

Since I am able to obtain a next to nil reflected power with my dummy load, I am believing that my feedline (which is pretty new) is ok. Putting the meter near my amp and then running my longer feedline to the antenna or putting the meter between the long feedline run and the antenna, I get about the same results.

If anyone can help, please email me: n3ntj@erie.net

Tnx es 73 de Matthew Steger

4003. need advice: Tempo One "sticky" relay, poor S-meter response on 10m

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-10 00:00:00 UTC
From: Ernest Stracener <ernest@itis.com>
Message-ID: <35062146.176770E5@itis.com>
Source record: 150880
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

IF YOU REPLY TO THIS MESSAGE, PLEASE RESPOND DIRECTLY TO ME AT ernest@itis.com

I've got a Henry Radio Tempo One SSB Transceiver, also known as a Yaesu FT-201 with a couple of problems & I'm looking for any good advice on how to best fix the problem (other than shelling out megabucks for a new rig). This is a 1970's vintage tube-type transceiver. Any helpful replies will be greatly appreciated....please reply directly to me at ernest@itis.com.....I'm not very astute when it comes to electronics (but I'm learning more with each problem faced), so please bear with me as I attempt to describe the problem.

1. I'm having an intermittent transmit problem that appears to be caused by a sticky relay or something that keeps the relay from properly closing. When the microphone is keyed and everything works, I hear the three relays closing in synch. When the microphone is keyed and everything doesn't work, I hear a relay close, but the 2 others do not close, occasionally, they will close after a second or two. I've watched the relays while this happens and the trouble seems to be with the "middle" relay...occassionally I'll hear a very faint hiss as the relay tries to close...not a sizzle, no smoke, just a faint, short duration hiss--sometimes the relay will close, sometimes not. I'm wondering if hitting the relay with a shot of contact cleaner might fix whatever is causing it to be sticky or whether I'm focusing on the wrong things here. The relay that seems to be the troublesome one has AE3218 DC12V stamped on it.

2. I'm having a perplexing problem on only the 10m portion of the radio...the S-meter doesn't deflect at all--even on fairly strong signals. On 80m, the meter looks like it is a living thing of its own, showing every heart-beat of the person on the other end (an exaggeration, but perfect operation on 80). The radio had been previously recrystalled by the former owner somewhere in the past to have CB where 10m was supposed to be. I've replaced the crystal and have done a realignment of the RF amplifier per the procedures in the manual and that did help the overall receive level, but the S-meter still does nothing on 10m. Everything else seems to be working fine...so far. I've recently made my first DX contacts & have had a number of really great QSOs with some folks on the east coast as well as locally, so I'm sure that the rest of the rig is functioning (at least most of the time).

Any helpful replies will be greatly appreciated. PLEASE RESPOND DIRECTLY TO ME AT ernest@itis.com

73,
Ernest Stracener, KB9RBZ

From: Worthlin <qrm@uswest.com>
Message-ID: <6e5anq$i7c@argentina.earthlink.net>
Source record: 150882

<<<Can anyone help me unlock out-put potential of this unit?

I'm not sure what you mean, but here is one mod for the unit. 73

TS870.mod
Here is your chance to prove how adept you are at microsurgery.
This mod will enable the TS-870S to transmit on MARS, CAP and other
frequencies.
1. REMOVE TOP AND BOTTOM COVERS.
2. REMOVE THE TOP SCREW FROM EACH SIDE OF THE FRONT PANEL
ASSEMBLY.
3. CAREFULLY ROTATE THE FRONT PANEL FORWARD TO GAIN ACCESS TO THE
CONTROL BOARD(X53-3560-11 A/4). THIS BOARD IS MOUNTED VERTICALLY
AGAINST THE BODY OF THE TRANSCEIVER. IT IS NOT THE BOARD THAT
IS MOUNTED IN THE FRONT PANEL ASSEMBLY.
4. LOCATE AND REMOVE RESISTOR R244 FROM THE CONTROL BOARD. R244 is below
IC12 ROM and above IC23. There are two chip resistors, one on
top of the other -carefully remove or break the top one..it is easily
fractured -that's R244.
5. REASSEMBLE AND THEN PERFORM THE CPU RESET BY HOLDING THE A=B
BUTTON DEPRESSED AS POWER IS TURNED ON.

David,

I have to throw in my 2c, I mean 2penneth worth as I have a close
working colleague that has witnessed a GEET processor in operation.
May I make a suggestion. As you're in the country of origin of the GEET,
may I suggest you take your blinkers off, dial-up the GEET.com web-site,
get yourself along to the next open display/lecture in a town near you
and simply observe.
Let's just say I'm intending to order a new Z28 Camaro later in the year
when the retrofitted 350 V8's have been fully sorted and will be
bringing this car back to England via the GEET site in Utah.
A damn long way to drive for something that does'nt work especially as
I'm buying the car in DA.
Tell you what I'll do, to help you off with the blinkers' If after a
personal demonstration you're not totally convinced of the GEET's
ability to live up to the manufacturers claims, and yours, I'll
personally send you $1000.

Philip de Cadenet
CEO TRANS-WORLD COMMUNICATIONS

NO! Except for carrier current at colleges and 100mW with a 10'
antenna. Also, larger college campuses CAN legally radiate an open
air signal on AM SO LONG AS THE SIGNAL IS ATTENUATED to legal field
intensities (in part 73) in areas that are off of the campus. There
are probably a few RARE schools that have very large campuses that may
radiate a few Watts 'open air' legally w/o a license.

Best Wishes,

Jon Hall

I am new to the world of ham radio, just got my tech license 3 weeks ago, and was wondering if anyone could provide me with some information about the mfj-9406 six meter radio. Is this a good radio for the price? ($249) How does it perform? Is there any known problems with it? I am very inexperienced, is this a good radio for a beginner on six? I have also thought about the tentec 2m to 6m transverter. Would this be a better option? I have only an fm 2m rig, so I would only be able to use 6 fm. Does this tranverter allow repeater operation? with correct offsets and sub audible tones? What about an antenna? My neighborhood doesn't allow radio towers, but I could put a small pole in the air, like those used for tv antennas. What would be best in this situation? a 6m loop? A small light weight beam on a tv rotator like the mfj-1762 6m beam? A dipole? Thank you in advance for any information.

4020. Problem w/ FT8500 Remote Kit

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-10 00:00:00 UTC
From: lui@netcom.com
Message-ID: <luiEpLCqt.Dt7@netcom.com>
Source record: 150909

I have an FT-8500 with the remote kit. If I don't use the remote kit and attach the control head directly to the radio, everything works fine. If I use the remote kit cable, everything works *EXCEPT* pressing the knob on the control face. The initial press will power the radio on, but then any additional presses will key up the transmitter (yes, very odd!).

When the control head is directly on the radio, a momentary press will toggle the main band, and a longer press will power off the radio.

I tested the remote cable, and none of the pins are shorted and each connection works fine (but has 2-3 ohms of resistance).

Does anyone have any ideas?

Stephen

p.s. This problem occurs with both the FS-10 Smart Controller and MH-39 DTMF microphone. I used the ADMS S/W to program the radio. I have not tried resetting the radio.

Indeed, my original query wondered whether this was in fact supposed to
be happening, but the answer is no, you can get a carrier in CW mode by
pressing PTT if there is no key inserted. As you rightly say the same
could be achieved on this radio just by switching to CW, but the
problem is that merely selecting a memory which has CW programmed as the
mode causes the radio to go into TX, a bit dangerous.

Founder member of the local riding club..

At the G-QRP October get-together one year, on the Friday setup day, the usual bunch went out for a pub lunch. Dick and Sheldon were in the back of my Discovery, and spotted a couple of riding sticks. Let's just say that there was a bit of a wind-up as a result, but I managed to divert it into shep jokes..

Cheers

I am looking for the BEST or BETTER substitute for the 2SK152 FET in the front-end of my SONY ICF 2010 shortwave radio. It must be low-noise and broadband (.1 to 30 MHz).

From the SONY ICF2010 FAQ file:

"Transistor Q303 in the front-end of the Sony ICF-2010 is easily damaged by static electricity."

"The popular MPF-102 transistor, available at Radio Shack, is a suitable replacement, as are several other N channel JFETs (Sony used a 2SK152, not widely available, and rather pricey, in the U.S.A.)"

How the heck???????????

NOT!!!!!!!!!

Lets get something straight .... water has NO POTENTIAL CHEMICAL ENERGY. Please note chemical. If it had potential chemical energy, rivers would explode on contact with a miserable cigarette some bridge crosser happened to toss out the window of car, or at least flare up. Its also guaranteed that steam in nuclear plants or coal installations would ignite in explosions as yet unrivaled. Sure there are things that react with water, buts it because the potential lies within the other chemical, not water! Water is about as stable as you can get for generically available chemicals. Many like to point to Chernobyl about how water will burn. But they miss the simple fact that the core was so hot, that enough energy was available to destructively breakdown water molecules. This in turn led to hydrogen and oxygen, which upon cooling to a few thousand degrees, ignited and burned. So it took alot more energy to break it down than it provided on recombination.

If you dilute gasoline with water, you have only increased the amount of the "mixture" necessary to move the car, cause water DOES NOT EVER BURN. Its nuclear potential is out of the question in a car motor, and largely out of question as of yet even in nuclear physics. Thats even if a modern fuel injected car would run at all with water, since water sticks together and doesn't dissolve well in gasoline, it will most likely be the only thing coming down an injector for several seconds, if one is lucky and fuel comes down at least two or more injectors of other cylinders, maybe the engine will run. You can increase moisture content in alcohol fuels or fuels with alcohol content, but it only reduces power, once again requiring either more fuel or that you live with less power.

I guess you view "Chain Reaction"'s energy source as a possible modern energy source. Get REAL! Where do you get this stuff???? I guess I'll never know.

I've had no experience with the MFJ-9406 but understand that it is a pretty good radio considering the price. I have had experience with the Ten-Tec 2m-6m transverter and can say that is is VERY good. I built the kit version that cost $95 and would say that the assembled version at $165 has to be a bargain. Advantages: operates any mode that your 2 meter radio operates. Disadvantages: operates any mode that your 2 meter radio operates - if your 2m is fm only then you get fm only out of the transverter, and for 6m you really want sideband capabilities. I am using my transverter with an all mode Yaesu 2 meter (FT-290RII) and it works like a champ. If you should buy the transverter you MUST keep one thing in mind: KEEP THE INPUT POWER TO THE TRANSVERTER AT 5 WATTS OR LESS, otherwise you can damage the transverter.

Overall, I am very satisfied with the Ten-Tec transverter and would recommend it to someone that wanted to get a taste of 6 meters but had only 2 meter equipment and needed to spend as little money as possible to get on 6.

I am new to the world of ham radio, just got my tech license 3 weeks ago, and was wondering if anyone could provide me with some information about the mfj-9406 six meter radio. Is this a good radio for the price? ($249) How does it perform? Is there any known problems with it? I am very inexperienced, is this a good radio for a beginner on six? I have also thought about the tentec 2m to 6m transverter. Would this be a better option? I have only an fm 2m rig, so I would only be able to use 6 fm. Does this tranverter allow repeater operation? with correct offsets and sub audible tones? What about an antenna? My neighborhood doesn't allow radio towers, but I could put a small pole in the air, like those used for tv antennas. What would be best in this situation? a 6m loop? A small light weight beam on a tv rotator like the mfj-1762 6m beam? A dipole? Thank you in advance for any information.

I failed to address your other points.

(1) use of the transverter with repeaters is no problem. Set your offsets on 2 meters to the 6 meter offset rather than the common 600k 2 meter offset. Pl tones go through just like on 2 meters. If your 6 meter repeater needs a 110.9 tone, just set your 2 meter rig for a 110.9 tone or whatever is required.
(2) antennas - I have a AEA 6 meter loop that I use and it works good, but it is horizontally polarized, and thus works best for sideband (sideband antennas normally are horizontal, fm are vertically polarized). Don't know about MFJ antenna but would have no reason to think that it would not be a good antenna, but again, if you are on fm you should mount it vertical, ssb go horizontal. Also, if you are fm only you might try a 6 meter J-pole that you can buy commercially or make one yourself.

No experience with that particular model, but one local club that I used to be a member of has a Maggiore Mi-Pro Mark II controller on their old GE Mastr-II repeater, and it has given YEARS of trouble-free service and is still in use as a hot backup machine. Excellent performance and high reliability. It's a simple controller without all of the voice crap and other bells 'n whistles, but it does the important jobs, like staying on the air when the new-fangled computer whiz-bang machines are down!

Bob,
The TUN mode puts out about 20W on my TS-820S. You use it when you first tune up to set the ALC level. (Switch to TUN, meter to ALC, peak it with DRIVE, then switch to IP and dip PLATE...still in TUN. Switch to CW, meter in IP, dip PLATE, meter to RF, max with LOAD, back to IP, dip...repeat LOAD and PLATE as required for maximum smoke.)

While in TUN, you can adjust any antenna tuner you have in-line for min. SWR. You can also use the TUN mode for plotting SWR curves for your antennae. Otherwise, it's only there for peaking the ALC level. (NOTE: You may have to back off on the carrier level if the ALC goes off scale high, which it may do on 40m or 75m; otherwise, mid-scale seems to be adequate.)

Hope that helps. (BTW, the Kenwood site has all the service bulletins for the 820, some of which you may find useful...especially if your digital display goes haywire when operating on 10 meters!)

Yes it is a little B...d to get at, better contact ur local Kenwood
dealer who will replace the skt and supply you with the CORRECT 3.5mm
plug.

> Secondly, the socket looks unusually complex with a second set of
> contacts in it (according to the diagram) and I doubt that I can

> the socket only to wreck it again.

similar! but not the same, there are several variations. agn ur local
Kenwood dealer will have the correct one.

Well! by increasing the power to the level quoted earlier in the thread
the IP's will be CRAP, you will have a big, wide, crap, signal.The radio
is designed to run at 100 w pep, not 120 or 150 even if the PA devices
will produce this power level.
As for wideband tx there is no need to do this to use the radio as an
IF, modify the Transverter to have an IF already available on the Radio!
Modifying the radio for w/b tx can cause serious problems like
confiscation by the R.A, (check Radio Active Magazine, March 1998)
Finally, for those smart A.....d guys out there who have modified their
radio's for W/B TX just think! In several cases that I have seen the
bandpass filter network will not stand 100w on the wrong frequency,
either the filter network burns up, or in the case of Icom Radio's the
PA's blow, and that will cost you dearly!
My answer is don't even THINK about it.

From: Joseph A Vilardo <jvilardo@voicenet.com>
Message-ID: <3504D96E.BAC5CE4A@voicenet.com>
Source record: 150981

I have been attempting to use the IC706 Control Program authored by John Hansen WA0PTV and can not get it to talk to the IC 706. I am using the MFJ 5383I level convertor connected to Com 1 on my Toshiba Tecra 720 CDT running Win95 and have tried evry combination of port speed and address setting for the IC706 MKII that I can think of without sucess.

Has anyone tried this program and have you had sucess with it? It looks like a terrific program, allowing you to set modes and memories from the keyboard and then down load them to the rig. I just wish I coulkd get it to play for me.

The author mentions a file called ICOM.ZIP that allows some freedom to choose port settings has anyone seen this file? I have tried to contact the author but have been unsucessful.

I posted a request a while back about a GE UHF rig, I've found out a bit more info, so maybe someone can point me in the right direction as to how to mod it for ham use.

- It doesn't appear to have a model name, such as MastrII or whatever.
- It has a seperate control head from the main box, with 2 digit LED displays, 3 of them, push-buttons for volume, squelch, channel select, scanning and adding/deleting channels from the scan.
- The combination number is N3UU2N040ZB
- It appears to have been made around 1982, by the date codes on the chips
- It's microprocessor controlled, synthesized freq. control
- It has a nice diagram of the unit on the inside of the top cover with the label "UHF SYN TOP COVER", info on test connectors and various alignment adjustments

I'd like to get it running and, if it can do full duplex, set up a UHF repeater. If it can't work as a repeater, it'll probably make a decent UHF mobile or base unit.

So, if anyone can help me figure this beast out, I'd really appreciate it!

Thanks in advance,
-cj

Dear Sirs:
I am in contact with you one another tim to propose to your firm to be one of the sponsors of the Cadiz University Radioclub.

Any aid will be welcome if it is possible we prefer HF radioham sets than money.

Our aim is to constitute the radioclub at Merchant Marine School to introduce the radiolife at the merchant marine radio and bridge Officers and other members of the university community.

I expect to be at the air in four months.

Coul your firm help us?.

Kind regards.

Carlos

Hi Jason - I think for safety's sake, you should consider using a marine band antenna. When you someday have to grab the mic and call for the Coast Guard, you don't want anything to hinder your comms (such as a high SWR). If your 2M rig (operating 10 MHz lower than your marine radio) doesn't like operating into the marine band antenna, consider mounting a 2M antenna on say, the transom of your boat.

Safe sailing!
Jeff KH2PZ (sailing the Hawaiian Islands in a Montgomery 15)

>
>I'm looking for one of the old Heath Kit CW QRP rigs. The rig as I remember
>it covered the CW portion of all the HF bands available at the time (no WARC).
>Anyway I think the model number is HW-8 (?????).

Hi Ron,

FYI, there were three Heath QRP rigs:

HW-7: covered 80/40/15 meters
HW-8: covered 80/40/20/15 meters
HW-9: covered 80 - 10 meters including WARC (optional)

The HWA-7-1 was the optional power supply for the HW-7 and -8.
I'm not real familiar with the HW-9 accessories (I've actually
never SEEN and HW-9 in person).

All of these had direct-conversion receivers and ran on 12 vdc.
I've owned several each of the HW-7 and -8 over the years.

Here's what it does (I've owned a turbo and know the tricks), it cools the air entering the engine, therefore the computer or human hand tuner can run a more aggressive timing profile, higher boost, and more fuel. But, as you say, its a fine mist, not GEET. Many RV's have such systems installed just to reduce detonation during hard climbs.

>
> I understand that this is not exactly "on topic". It's just a side-note I
> thought I'd throw in.

Being also a person from the part of the country where the best thing on a Saturday night is a truck pull (I really do not enjoy professional sports at all, except NASCAR, NHRA) or a mudfest somewhere deep in the woods, I have quite a bit of knowledge of how tractors used in tractor pulls work. The deisel SuperTractor class, unlimited of course, injects water at the end of the track to cool the cylinders and pistons, or even with normal watercooling, the engine would just melt.

But none of these applications mentioned as of yet are equivalent to what GEETS claims, which is power from displacing fuel from a mixture and replacing it with water.

>I posted a request a while back about a GE UHF rig, I've found out a
>bit more info, so maybe someone can point me in the right direction as
>to how to mod it for ham use.

cj -- many years ago I worked for a GESS GE Service Station. We had ALL the manuals, service bulletins, etc. I suggest you contact a GESS and ask them. Unless GE changed their nomenclature system, the number you found *is* the model number: N3UU2... That number tells it all: 1st letter - model (Mastr II, Mastr Pro, etc); 2nd digit - i don't remember; etc, etc

I jumped over to the web quickly and did a search for GE mobile radio. Got a number of hits. You might want to start/try there.

Good luck

More GEET:

I read their page fully and all the so called "testimonials". It reads like a comic book. The stupid antics they pulled, etc. (yeah right) and in addition to that, none of the engines were tested under load. I can assure you they would have stalled it with the simple application of a clutch, in particular with regards to the 350CID Chevrolet motor and its accompanying Camaro body and transmission. How come no dyno test? Very few make these claims without dyno readings to back it up. If the observers had known anything at all about engines they would have requested exactly those specs. A modern computer controlled, sequentially fuel injected push valve engine can run without a noticeablely smelly exhaust after warm up. So what? Even funnier than all of that, was the complete lack of control systems for the fuel processor. I couldn't stand it any longer .....

The next funny thing is the control system for the GEET device. No electronics were mentioned, no connection to the throttle assembly, as described anyhow. That means one of two things, when the engine suddenly demands a large amount of power, it will lean out, stalling and perhaps detonating to the point of engine destruction, or two, the fuel processor will take minutes to adjust, and by that time the motor will have spewed tons of sorry old HC's out the exhaust.

On to something with content applicable to the group:

Anyone played with the Part 15 SS equipment available commercially? What kind of pricing are we talking here? I live in the city, and am a apartment dweller, which also applys equally as well to my fellow networkers, so foghorn desgins just aren't gonna work for us. Spread spect. will be the key until I move out to the country side. Prices, companies, experiences are welcomed.

Excuse me while I laugh till I cry about GEET's fuel processor,

Pearce

I wrote that program when the only 706 available was the original. When
Icom came out with the 706 Mk II they changed the radio's address (why?
I don't know!). Anyway, if you change your radio's address to 48H, it
should work. On my pre MK-II you do this by holding down the lock
button
while turning it on to access the menu. While you are at it, check to
make sure the buad rate is either 19200 or auto.

Let me know if you have further problems.

John Hansen, W2FS (ex-WA0PTV)

4114. Alinco DJ-S11, first comments

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-11 00:00:00 UTC
From: Bob <cqbdiaz@pacbell.net>
Message-ID: <35078B4B.698F@pacbell.net>
Source record: 150791

Well, HRO started selling the Alinco DJ-S11 (2M HT) for $88 and I've
been thinking about getting one for some time, so I purchased one
the other day. I've had very good results from the DJ-S41 (440 MHz)
version radio, so I decided to give the 2M version a try.

Keep in mind that the HT puts out only about 1/3 of a watt, so it
isn't going to reach those distant repeaters from a bad location.
However, with a clear shot at a close repeater, it comes in with
strong. It's small size and light weight make it ideal to slip in
my pocket. Next time my company sends me out of town on a business
trip, I'll take this radio along. (Even if I can't reach some of
the distant repeaters, it'll be fun just to listen.)

The radio takes 3 AA batteries. I like to use the Ray-O-Vac renewal
batteries, but in a pinch, I can use any standard AA batteries.

Setting up the radio was very easy, the radio doesn't have a ton of
complex features to worry about. In fact, there's no key pad for
the touch tones, but after all, this is an $88 HT.

So far, I'm very happy with the unit. I'll post an update in a few
weeks after I get a chnace to play with the unit some more.

73,
Bob (KF6JHG)

of my email. (I put the letters "cq" so that the automatic email SPAM
programs will get the wrong address.) :-)

==========
THE ALINCO DJ-S41T HOW TO BOOKLET:
==========

The instruction paper for the Alinco DJ-S41T is somewhat
limited and cryptic. What follows is an outline of how to
use/select the different features found on this unit. The
source for this paper comes from my "playing" with the unit,
the 1 page Alinco instruction paper, and an excellent WEB
page created by Bill Ricker (N1VUX).

http://world.std.com/~wdr/alinco.html

Bill's WEB page is both a review and a cross-linked
instruction manual.

Buttons are labeled in quotes as follows: "BUTTON"
If it's a shifted feature of a button, like press "F" and
"BUTTON(SHIFTED-FUNCTION)", the shifted name is placed in
left/right brackets.

You'll notice that I've broken the functions into 3 parts:
OPTION SETTINGS, FREQUENCY SELECTION, and GENERAL FUNCTIONS.

OPTION SETTINGS: are those settings that stay that way even
after a power off/on cycle. Functions listed in 'Option
settings' do NOT affect the frequency selection process.

FREQUENCY SELECTION: settings are those settings that affect
the transmit or receive frequencies.

GENERAL FUNCTIONS: are those items that don't fall into the
first 2 groups.

Some of these instructions may work with the Alinco DJ-S11T;
however not everything will operate in the same way.

```
============================================================
OPTION SETTINGS:
============================================================

CHOSE A 1,750 Hz OR A RINGING CALL TONE:
Hold the "CALL" button and turn on the power.
This is a toggle function.

KEEP THE LAMP ON ALL THE TIME:
Hold the "LAMP" button and turn on the power.
You can press "LAMP" to shut the light off, but when this
feature is active, the auto shut-off of the light
won't happen.

KEY LOCK/UNLOCK:
Hold the "F" button and press the "MONI" button.
This is a toggle function.

SELECT LOW POWER/'HIGH' POWER MODE:
Hold "PTT" and press "SCAN(SHIFT)".
The word LOW will appear in the upper right corner of the
LCD when in low power mode.

SET THE AUTO POWER OFF MODE:
Hold the "F" button and press "LAMP(APO)".
Use the "UP"/"DOWN" buttons to select the time in minutes
or off (no auto power off).
Press "PTT" to save.

TURN ON/OFF THE KEY PRESS BEEP:
Hold the "MONI" button and turn on the power.

TURN OFF THE COURTESY BEEP (TONE):
Hold the "DOWN" button and turn on the power.

TURN ON THE COURTESY BEEP (TONE):
Hold the "UP" button and turn on the power.

VFO/CHANNEL FREQUENCY LOCK-OUT MODE, ON/OFF:
Hold the "V/M" button and turn on the power.
I use this mode to keep my sons from accidentally
selecting the VFO mode and picking an odd frequency.

============================================================
FREQUENCY SELECTION:
============================================================

CHANGE FREQUENCY/MEMORY:
Press the "UP" / "DOWN" buttons.

FASTER FREQUENCY SELECTION IN VFO MODE:
Taping the "F" button will enable you to change the
amount of the frequency that is changed. Depending
on the number of times you press "F", this could
increase to MHz steps or 100kHz steps.
```

JUMP FROM (VFO or MEMORY) TO THE 'CALL' MEMORY OR BACK:
Press the "CALL" button.

REVERSE THE INPUT/OUTPUT FREQUENCIES:
Hold the "F" button and press "SCAN(SHIFT)".
Release the "F" button and hold down the "MONI" button.
Pressing "PTT" button will bring the unit back to the
normal state.

SCAN THROUGH MEMORY/VFO:
Press the "SCAN" button.
Use the "UP" or "DOWN" buttons to stop the scan.
You may also scan by holding the "UP" / "DOWN" button for
about 1 second.

SELECT BETWEEN THE MEMORY AND THE VFO:
Press the "V/M" button.

SELECT THE FREQUENCY SELECTION STEP SIZE:
Hold the "F" button and press the "UP(STEP)" key.
Use the "UP"/"DOWN" buttons to select the amount.
Press "PTT" or "V/M" to exit this selection mode.

SELECT THE TRANSMIT/RECEIVE OFFSET:
Hold the "F" button and press "SCAN(SHIFT)".
Once selected, release the "F" button.
Use the "UP"/"DOWN" buttons to change the amount.
You may press the "SCAN" button to select '+','-', or
no offset.
If using a Memory Channel, you MUST save this setting
in order to keep it. (See WRITE A FREQUENCY below.)

WRITE A FREQUENCY AND SETTINGS TO A MEMORY SLOT:
Hold the "F" button and press the "V/M(MW)" button.
Release the "F" button and use the "UP"/"DOWN" buttons to
select the memory number.
Press the "V/M" button to store it there. (Do NOT hold
in the "F" button when you do this.)

==
GENERAL FUNCTIONS:
==

ERASE A MEMORY SETTING:
Hold the "F" button and press the "V/M(MW)" button.
Release the "F" button and use the "UP"/"DOWN" buttons to
select the memory number.
Hold the "F" button and press the "V/M" button to erase
that memory.

RESET THE UNIT:
Press and hold the "F" button and turn on the unit.

SELECT CTCSS (PL) TONE & CTCSS TONE ON/OFF:
Hold the "F" button and press "Down(Tone)".
Use the "UP"/"DOWN" buttons to select the tone.
Hold the "F" button and press "Down(Tone)" to select PL
tone ON or OFF. ("T" appears when it's on.)
Press "PTT" or "V/M" to exit the tone selection mode.

SEND A CALL TONE:
Press "PTT" and the "UP" button or
Press "PTT" and the "DOWN" button

SET THE ALARM:
Hold down the "F" button and press "CALL(BELL)".
(I can't figure this feature out, all it does is flash
the bell icon on the LCD when a signal is received.)

TRANSMIT:
Press the "PTT" button.
See OPTION SETTINGS for selecting the power level.

TURN ON THE LAMP FOR A FEW SECONDS:
Press the "LAMP" button.

UN-MUTE SQUELCH:
Press the "MONI" button.

==========

> 73's Steve NS1R

Astron make a line of switchers as well. I have a SS-30M at home and it
works very nicely. It is fairly small (around the size of a RS-12) and
only weighs 5 pounds. As for reliability, I haven't had mine long enough
to tell, but I suspect it will do fine. I have had problems with switchers
in computer disk drives, but I suspect that this is mostly due to them being
made cheaply. I work in computers and have seen quite a few of them die,
however I have also seen well-built switching power supplies in mainframes
last over 10 years. I'm hoping that Astron does as well with their
switchers as they do with their "analog" supplies.

I wasn't sure how to answer a question that I was ask recently. Anyone want to help me out with this one?

Q: Is there any non amateur HF communications license available?

They are looking for point to point and point to multi point Long range communications system. Portable, mobile and fix station operation. HF only no satellites. Need multi freq coverage for US communications day and night. Dont need 100% reliable at all times but daily or several times a day comms for status and supply request. SSB a must, RTTY would be a plus.

>
>
Brian,
For the money, it is not a bad deal. I used that rig to start out in 6M; with only a wire dipole mounted below the peaks of the house it allowed for QSO's from southern California to Colorado and Texas, New Mexico and even an Alabama station. The radio does tend to drift a bit, and it has no RIT - though it has 'fine tuning' instead. A very basic radio you basically just plug it in and turn the dial, the receive is quite good; have compared it side-by-side with a Kenwood TS-60s and the MFJ could hear everything the Kenwood could (but the Kenwood was easier to tune, did not drift and you have a few 'gizmos' to help pull a signal out if need be). It is SSB ONLY; no FM and it only covers the 50.0 - 50.3 CW and SSB sub-band (well, a portion of it anyway) so unless you have a lot of locals on 6M SSB (Texas seems to have a lot of 6M operators) there may be a lot of time between QSO's, but when the band is good you will find it fairly easy to cover most states from your location. All in all not a bad way to get on 6M ssb; look around at some swap meets for a used one or check out one of the swap groups.

Hope this helps,

73,
Howard

The FCC doesn't license anything under 200 watts in the FM broadcast band. I remember seeing somewhere a low power station taking the FCC to court over it. I could be wrong, but, I think there is a loop hole here .

THE BELOW ITEMS WERE PURCHASED FOR A CONTRACT IN
RUSSIA AND THE JOB HAS BEEN CANCELED. THESE ITEMS ARE SURPLUS
TO OUR NEEDS AND WE ARE ACCEPTING REASONABLE OFFERS.
ALL MATERIAL IS NEW AND PACKAGED IN ORIGINAL CONTAINERS ETC.
NEW MIDLAND RADIO EQUIPMENT
1-VHF 100 WATT MIDLAND REPEATER
2- VHF 100 WATT MIDLAND BASE VEHICLE STATION
4-AC/DC POWER SUPPLY UNITS FOR BASE/VEHICLE STATION
45-VHF 100 WATT MIDLAND VEHICLE STATIONS (RADIOS)
45- VEHICLE ANTENNA KITS
1-SET OF CONNECTIONS FOR REPEATER ANTENNA
250 FT 7/8" FOAM AND COPPER HELEAX TRANSMISSION
CABLE FOR REPEATER STATION.
1- ANTENNA REPEATER STATION.
7-6DB GAIN ANTENNAS FOR BASE STATION

Details
a. Astron Booster Model RS 50 A 4 ea
b. Midland Mobile Radio Model 70-1395B (45 ea)
c. Midland Syntech Base Station Model 70-3051 (1 ea)
d. Mobius Electronics Omni Broadband Antenna 5ea
e. 7/8" Heliax Cable 50 ft
f. LDFS w/o connector kit 1ea
g. Short Whip antenna 41 ea
h. Spares, connectors, install parts 1 bx

Call me strange, but I would prefer the radio to work 'as
advertised', so I would rather fix the fault.

That station is still on the air in California. The FCC can not shut it down as a Judge is looking into the fact that the FCC does not issue licenses for stations under 100watts, and therefore limits the airwaves to only the very rich.

as anyone noticed with the 706 mk 2 on fm ,what the old am guys used to call downward
modulation? that is having 100 watts output then speaking into the microphone and watching the output power drop to as low as 75 watts depending on voice peaks. just
wonder if this is a quirk or if my rig needs to be returned to icom
tks kcubilo@freeway.net

HELP ?!
We still need a few items to complete the new repeater for Piscataquis County, Maine (if you've ever been here you know we're one of the few places on Earth that still need a repeater! :)

Looking for:

16 to 20v, 20+ amp transformer with 115v primary.

Rack panels, 5.25" to 10.5", what have you got?

Enclosures, one 4x4x15" or larger, one 7x10x13 or larger.

20 feet of RG-214

If you have any of this stuff, please Email, and include condition of the item(s) and asking price. Thanks.

I picked up a TR-3 with a hand held mike. There's no identification on the mike beyond the Drake logo. The mike doesn't work, so I need to rewire it (the wires inside the mike look like they were all clipped).

The switch inside the mike is a six lug switch with the name Standpole on it.

Any help on which wires connect with which lug?

Thanks,
Fred, KG0FT

Which is an absurd position. 100 watts is only 2 cents an hour, or $14.40
a month. That's a mighty peculiar notion of "very rich".

But in fact the FCC doesn't license anything less than a Class A station
anymore. That's 3 kW, and that costs about 60 cents an hour, or $432 a
month. That's still not what I'd call "very rich", but it is a bit heavy for a
casual hobbyist. And indeed that's the intent, to keep the casual hobbyist
from frivolously tying up broadcast frequencies.

Of course broadcast licenses aren't the issue here. Rather the issue
is Type Acceptance (or Part 15 Certification), which the equipment
being touted is unlikely to meet. It is illegal to market a device for use
in the broadcast band which doesn't meet one or the other of those
criteria.

It can key an amp if the amp can be keyed by a TTL low (IE sink to ground
of no more than 16 mA). The usual practice is to use an external keying
transistor or a small reed relay to buffer between the TTL level out of the
radio and the switch current needed by a particular amp.

>What about problems experienced with the so called "power spike" referred
>to in the review. Evidently the mk2 gives out a spike at 100 watts before

>lines from the rig to the amp.

Practically all radios do this if you drive them heavily and then depend on ALC to
reduce drive to less than their rated output. This is due to the time constant of
the ALC circuits. The solution to this problem is simple. *Don't do that*. Use an
amp which requires 100 watts drive, or use a pad to reduce drive to the maximum
the amp wants to see. Then you can't overdrive it, and you can disconnect ALC
and forget that it exists.

From: anc@newstar-tech.com
Message-ID: <6e6g02$m2s$1@nnrp1.dejanews.com>
Source record: 150825

Hi.

I have a DJ-180T hand-held from Alinco. It has been working fine for last 5 years but suddenly it displays strange things. This radio is supposed to receive from 130MHz to 174MHz, but it only covers ham band only for both receive and transmit.

I even tried to reset the memory, but it does not work.

Should I send it to Alinco service? This radio is only worth about $100 these days, and I don't to spend too much for this one.

Any comment will be appreciated.

Thanks.

saturday.....March 14, 1998
Its the second Saturday of the month, coming up this Saturday. Fontana
Swap Meet at A.B Miller High School, 6821 Oleander Ave., Fontana, Calif.

Take the 10, San Bernardino Freeway east to Citrus
Ave, North to Baseline, turn right to Oleander and north (Left) to the
School.

Pomona Freeway Eastbound to the 15 Freeway, North to the San Bernardino
Freeway then follow the directions above.

Time: around 6 AM to 11 AM.

This event is sponsored by the Inland Empire Amateur Radio Club.

Last month and the month prior was a "Rain Out", so this Saturday, with
the closure of De Vry Swap Meet...should be a sell out!!! Bring your
"Goodies", See you there..

Lonnie (NT6B)

4149. FS: Two RCA 45 Used Tubes with Readings-No Luck of the Draw

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-11 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6e6am8$3q7$3@csu-b.csuohio.edu>
Source record: 150828

Two RCA #45 used tubes for sale with my actual TV-7D/U's readings/ratings for each tube--which high volume dealers don't have the time economically to provide.

Some Tube dealers will charge obviously less for these 45 "used tubes," but often you get what you pay for. I've seen prices of $30 to $40 range for example. BUT--It's the luck of the draw if you get a strong one or weak one that meets minimum standards. With these two RCA 45 tubes you know exactly their readings.

These two RCA 45 tubes were evaluated on a calibrated TV-7D/U tester in excellent shape (Please understand your readings can vary obviously).

I have had this experience of buying from big name honest dealers and getting weak pulls as well as good pulls. Again, luck of the draw for a cheaper price.

Have rated and priced the following two tubes accordingly:

Tube 1: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 78

Asking price $45.00 or B/O plus shipping. This tests approximately like a new tube in my opinion!!!

Tube 2: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 65

Asking price $35.00 or B/O plus shipping. This is a strong used tube in my opinion.

International buyer welcome.

Thank you.

>unit has the quad-conversion reciever so you KNOW that it will be
>SENSITIVE!!"

That's just BS, David. I posted about this recently. The weak link in
nearly any superhet is the mixer. The fewer mixers you have in the
receiver, the better. If single conversion will get you the image response
and selectivity you need, then that's what you want. If you must go to
double conversion to get both the image response and selectivity you
need, then you reluctantly do it. If you must go to an extreme like
triple conversion, then you'd better have a good reason because the
performance cost is starting to become high. (About the only excuse
is so that you can easily implement IF shift.) A quad conversion
radio speaks volumes about the ineptness of its design.

In summary, multiple conversions are always undesirable, but sometimes
you have to do it to meet image response and selectivity goals. You pay
a price due to the inevitable extra distortion products introduced by the
extra mixers, however, so you should only accept multiple conversions
reluctantly as a last resort. It is not something you should proudly proclaim
as a feature. That's a huckster scam the hypemeisters may try to pull on
you, but if you understand the fundamentals of receiver design, you'll
know you're being jerked around.

For sale used Yaesu FT-470 Dual-Band Handheld and Accessories.

Heavily used 2M/70CM HT, works great, case scratched, all functions
work, serviced in early '97,
full 5W output on both bands, not modified, receives out of band on 2M.

Sold ONLY as package. No splitting. Bought used early '95.

PACKAGE
Yaesu FT-470 Dual Band Transceiver,
FNB-11 600ma 12VDC Nicad Battery, new insert '97, case solid but rough
looking,
FNB-12 500ma 12VDC Nicad Battery,
FNB-17 600ma 7.2VDC Nicad Battery,
PA-6 DC Car Adapter/Charger,
NC-29 3 hour Drop In Nicad Charger,
NC-18B Overnight Nicad Battery Charger,
Leather Case for HT and FNB-17 Battery,
User Manual,
Service Manual,
Original Box (for HT),
Assorted replacement parts (knobs, screws, battery latch, etc),
Comet CH-72H Dual Band Antenna

Cost: $300 + shipping, offers welcomed.

The most simple and reliable "keyer" would be a motor-driven wheel;
use a nib to remove pieces around the circumference so that only
the code characters remain - these then open and close a lever-switch.

We used such code wheels for our coastal aid-to-navigation radio
beacons.

I use a 2mtr whip on my runabout for ham and marine . Never put a meter
on it , but it seems to do the job . My antenna is 1/4 wave using the
water as it's ground plane . I do not know how this will work on a sail
boat as the height above water is much higher !

What Mr. Dunnifer et. al. are talking about are the ungodly filing
and crushing licensing fees. The actuall transmitters for such a station
could be made FCC compliant for _well_ under $1,000!

>
> But in fact the FCC doesn't license anything less than a Class A station
> anymore. That's 3 kW, and that costs about 60 cents an hour, or $432 a
> month. That's still not what I'd call "very rich", but it is a bit heavy for a

>

That sir, is sooooo much horse poop. Are you being serious here? Am I
missing a joke? ;-) Run over to the FCC homepage right quick and see just
how much it costs to _file_ for broadcast bandwith! Krikey! At least two
Kilobucks just to file! Yow!

When you add in lawyers fees and engineering reports *whew*.

The gist of the two petitions recently filed with the FCC (and by the way,
recieving serious consideration, despite their flaws...) is that
type-certified low-power stations should be allowed. I know of at least
two very law-abiding clean-signal-anal hams in my town who are frothing at
the mouth for the suggested rules in these petitions to be put into part
15!

You should check these petitions out. They are on the FCC homepage in
.pdf format. They make for interesting reading!

> Of course broadcast licenses aren't the issue here. Rather the issue
> is Type Acceptance (or Part 15 Certification), which the equipment
> being touted is unlikely to meet. It is illegal to market a device for use
> in the broadcast band which doesn't meet one or the other of those
> criteria.
>

But not illegal to build your own. Just *probably* Illegal to use it. ;-)

There are several court cases pending about the FCC's jurisdiction on
INTRAstate broadcasting. Wheeee!

>snip<

That's correct. It is also true that piston engined aircraft have used water injectors for years to increase power and range. The water is not used as a fuel, of course. It's certainly not an octane booster. Still, for whatever reason, a fine mist of water enhances the action of the fuel/air mix in large piston engines. (I've never heard of it being used on small engines.)

A few years ago, my brother added a water injector system to his hotrod (65 Dodge van) , and noted a slight difference in how the vehicle ran at high speed. At lower RPMs, not much difference was noticed. Eventually, he decided that it was more trouble than it was worth (he kept forgetting to fill the little water container) so he yanked the system out again.

I understand that this is not exactly "on topic". It's just a side-note I thought I'd throw in.

I am getting my licence in a couple weeks, but saw some great deals on 2-meter HTs in my area, that I have to get now because, being in college and having a family, I am on a strict budget :-) The only problem is I don't know which one to get:-(

My 2 choices are a UHF FM HT with a freq coverage btwn 425-449.995 RX and TX. Then there is a VHF FM with a freq coverage btwn 144-147.995 both RX and TX. Please anyone have any advice? I live in the California bay area, if that would help.

Also, is it against the law for me to just turn it on and listen, so I can pick up the right way to talk over the air, so when I get my licence I don't look, I mean sound, like a complete idiot.

Thanks in advance,
Future ham'er Sam C

>
>Which receiver has better performance?
>Problems noted with each? Fixes?

The receiver in the IC-735 is much better than the one in
the IC-745. The IC-745 is prone to overload and susceptable
to problems with adjacent channel signals due to excess
phase noise in its synthesizer.

Since you have both, try them side by side on 75m at night.
You'l immediately see why you'll want to keep the 735 in
preference to the 745.

4178. Is A Quad Conversion Receiver Better?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-11 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01bd4c9b$8e43ece0$558a92d0@davidc.bit-net.com>
Source record: 150895

I just read the posting below ona swap site and I thought I'd ask the experts here, is a quad-conversion receiver really "better" than triple? Is it more sensitive? Is it more selective? Is it noisier (perhaps due to pll)? What are the pros and cons of going beyond triple conversion?

I am in weak location (200ft above sea level, surrounded by 350-400foot hills, inland) so I am always looking for a slight edge. I am currently running a Kenwood 440SAT. Would the IC-730 provide a significant receive advantage, or should I get a TS-830s?

"I have an Icom IC-730 HF rig for sale. This is a solid state older unit and is in good condition. It has 80-10 meters with the WARC bands. This unit has the quad-conversion reciever so you KNOW that it will be SENSITIVE!!"

Read the www.geet.com "testimonial". You can tell its a fluke. But thanks for the incompetent insult anyway. Gary even brought you the math, I guess because of the 100HZ music transmitter type mindset, you can easily imagine whatever you want. I'll even offer to run the simulation on my machine of your radio, as long as you draw the circuit and compile it into a netnode list, along with all needed models of devices (standard of course).

>All the other answers I have read sound like the stuff I got when I said I had
>made a radio that had transmitted music on a 100 Hz bandspread.

Another good one. Ever heard of the Fourier Transform? Try it sometime. Reread my offer.

> It sounds also like the injunction argument that broke Lee DeForest.
> You may remember reading about him. He claimed to have invented
> a thing (he called it an AUDION) which could amplify audio.
>

In his case, no one understood the physics at the time, and even more than that, the "established base" wasn't open to anything even logically presented because at the time, the best place to be was on a board or academic position. Comfortably I may add. How else could you explain the overlooking of real proof that audio amplification provides?

On the other hand, the fuel processor is a thing much different. There isn't a lick of proof whatsoever. The proof presented so far has been here say by a visit to a "installation", then a grand excuse of why the car so equipped couldn't make it to the demo, and measurements taken from equipment that was neither tested for calibration, accuracy, or tampering. And further, enough tests were not performed. Get real, no dyno test. The control system for this device is non-existant. How does it adapt to the engine needs, tell me? And finally, after failing proof tests of validity by measurement, it fails the laws of physics miserably. Maybe physics could be rewritten if all the true proof tests were passed, but it couldn't even do that. So there, I am thinking, you are accepting an opinion of an uninformed and ill equipped observer, and for some reasons the same instincts that for some reason tell you that you can build an AM radio that transmits music in 100HZ bandwidth or less take over and prevent you from thinking by giving you a headache.

Now, please, trully start thinking!

> The court agreed with the arguments by the supposed authorities of the day,
> who hadn't assayed the subject, but had just read it and decided it didn't work.
>

Engineering is engineering. The guy is either creating a nuclear reaction or its bogus. You can't extract more chemical energy where there is none, and a fine mist of water would never increase engine effecieny greatly, it only modifys the temperature of the intake air flow, therefore modifying possible timing curves and boost delivery curves on turbo motors, and even further down the line, allows more fuel to be injected into the engine. Its detonation elimination effect is about the only true effeciency improvement that it garners, because with less det., you can run more agressive timing, improving the use of your fuel.

> We call the Audion tube (valve) a Triode, today.
> All CRT tubes on TVs and PCs are descended from the man who was ordered
> by the court to stop selling AUDION bottles.
>
> You sound like you are trying to join the few who do think, and I commend
> you for it.
>

I'm sorry, but that guy has not thought a bit, nor has the president of GEET, nor has the guy who built the thing, except for turning a profit from people who aren't engineers. And finally, neither have you. I don't deny that inventors can come up with some impressive stuff, but the fuel processor is not one of them. And looking at your homepage, you have alot of bogus stuff also. If your idea is so impressive about the pulse engine, try it on a supercomputer. I'm sure someone can throw away the money for you to try it, if your proposal was well worded. Heck time is so cheap now, it really doesn't have to be That reasonable. These simulations are completely impartial, applying only the laws of physics that seem to apply to every other thing on the planet. Would you maintain that there is a better laws of physics? Then that could be tested too. Establish them, program a new simulator, then simulate your engine. Then plug in a real everyday engine. The fact that the real engine no longer runs should prove enough to you.

Many single band HF mobile antennas (hamsticks - around $20) will work OK in a small portion of the band. If you want a tuner, I'd ignore the Icom and get the SGC 231 - it covers 1.8 to 60 MHz, and works very well with the 706. That's the pair I have in my jeep - the 706 Mk II and the SGC 231. I can work most bands using the 20m hamstick, switching to other antennas when I want better performance.

(better than what, I hear the hue and cry - any mobile antenna is a compromise, especially at low frequencies. you need a GOOD ground, which for me meant ground straps on doors, hood, rear hatch, etc. about the best mobile antenna you can get is a screwdriver - the performance is superb, and they are very large and very ugly.)

4183. Here is a mod for cellular reception with Icom IC-W32A!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-12 00:00:00 UTC
From: morinm@csgoeland.qc.ca
Message-ID: <6eabs0$jf8$1@nnrp1.dejanews.com>
Source record: 150552

Hi guys
I thought you might like to hear about this. Without getting into your radio and hacking it, you can do interesting stuff with a standard IC-W32A. Here is how to do it:

Press BAND and SQUELCH while pushing POWER ON and keep pressing these 2 keys for at least 5 seconds. Here is the receive range you get on the 2 parts of the display. You alternate between the ranges bypressing the BAND button.

Right side of the display:

Band one : 10 NOAA weather channels.
Band two : 108.000 to 135.995.
Band three : 136.000 to 199.995.
Band four : 435.000 to 454.995.

Now the fun stuff is on the left part of the display, you get 4 bands but the interesting one is the fourth one, here goes.

Left side of the display:

Band one : 136.000 to 199.995.
Band two : 300.000 to 399.995.
Band three : 400.000 to 599.995.
Band four : 600.000 to 824.000.
849.000 to 869.000.
899.000 to 999.995.

If you look at band four, you notice the gaps in the 800 range, that's where cellular is. But I found out by listening that the 600.000 to 824.000 part is in fact the missing part of the 800 band. This means that 624.000 to 649.000 is in fact 824.000 to 849.000 and 669.000 to 699.000 is in fact 869.000 to 899.000. I have heard lots of cellular conversations on that band and reception is full quieting, which means it is not image frequencies but the real thing. I found that out by accident, I was just listening to that band when I heard cell phones everywhere. What I don't know is what the 700.000 to 824.000 part gives you. Hope you like this discovery. It sure beats hacking into your radio with a microscope. Have fun.

73 de Mike.

Guys, buy this. I have one and it is great!! Has all the advantages
of tapes (convenient to carry) and software code programs (flexible).

Besides, this seems to be a good price.

> Besides, this seems to be a good price.

I also own the MFJ Pocket Morse Code Tutor and it's VERY flexable.
I can set all sorts of things on it to help me practice. The most
important feature is the user selected character set. It provides
random characters for the set of characters I select. This allows
me to pick the "problem" characters and work on them.

Currently there are 3 different models of this Tutor. The prices
are: $40, $60, & $80. Also there's an older model of this Tutor.
If you're going to purchase the Tutor, make sure you know which
model you're getting. Better yet, Buy the top of the line unit
with the LCD for $80. It has some great and useful features that
the lower models don't have.

Saudi is VERY restrictive. I believe that there are only four
licensed stations, with three belonging to members of the Royal
family. HZ1AB is at the Dharan Air Base. It is available to
members of the military and certain foreigners. I took my upgrade
exam via them. Very nice station with a huge rombic.

> And if it is possible could tell me how?
> Thanks a lot in advance

Christian, the HTX-202 was built as a rig to have as few problems with
RFI as possible. The PLL is designed only to output on the 2M band.
There are no true modifications for this radio, except one to operate a
9600 packet, and even that one entails modifying the case slightly.

The 202 is not designed to handle the out of band frequencies in any way
shape or form. Sorry

>equipment, Marti STLs, transmitter monitoring equipment, modulation monitors,
>headphones, log books, staff salaries, etc.?
>
>Seems to me there is a lot more to a radio station than "$432 a month."

Most of that is capital budget, not operating budget. The tower and transmitter are nearly the only capital items unique to broadcast. The rest would be required if you were just a disco DJ with no broadcast aspirations. And you can amortize capital budget items over their expected lifetimes. That's at least 20 years for transmitter and tower. For a Class A, you aren't looking at a $100,000 tower or a $30,000 transmitter anyway. You're looking at a $10,000 tower and a $5,000 transmitter.

Staff salaries exist for any small business with employees. If you were running an auto body shop, you'd have those too. Consumables are also part of any small business operation. Radio is generally a *small business*. It is not the province of the "very rich". That's absurd. Most radio stations are mom and pop operations.

Most of the people on this thread seem to look at this as a *hobby*, and broadcasting *as a hobby* would be rather expensive. But as a small business, it is not expensive. Most stations net a comfortable living for their owners, just as a hair saloon or an auto body shop might. The level of investment required isn't much different than to open a coin laundry.

What seems lacking here is *perspective*. Consider that a McDonalds franchise costs $1,000,000. That would put up one mighty fine radio broadcast facility, considerably better than 99% of the Class A stations in existence. You can actually get a Class A on the air for under $20,000 if you don't mind buying some used equipment. That amortizes out to a little over $1,000 a year on your operating budget. That's *well* below your power bill for the year. And both together total to less than the

poverty line in the US. Saying broadcast is the province of the "very rich" is nonsense.

The vast majority of broadcasters are mom and pop operations. But they *are* businesses, not really much different from a hair saloon or an auto body shop. They are how middle class people earn their living. Broadcasting isn't a hobbyist playground, it is a serious business that keeps the kids fed and clothed.

That is simple, but it is a Rube Goldberg mechanism with moving parts that wear and fail. A better approach is a PIC processor and a keying transistor. Total cost under $10, and solid state so there is nothing to wear out. ($35 if you use a Basic Stamp to ease programming effort.) This can implement all your timers and handle ID chores as well as any other message you want to beacon.

4202. Foreign Licensing question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-12 00:00:00 UTC
From: jordan@santanet.com
Message-ID: <6e96rcnbk1@nnrp1.dejanews.com>
Source record: 150608

Does anyone know the rules and regulations for using amateur radios in Saudi Arabia or Kuwait?? Being in the Air Force, I may get deployed there and I was wanting to take my radios with me and use them. Just trying to get my ducks in a row before I go over there. I need to know the licensing requirements, and any restrictions that may apply.

Thanks,
Paul Jordan

hershman wrote:

>$1700 to $1600 USA price. NOT $2000

I do hope you are correct. I was rather surprised to see the $2000 price
on the Ross page... Maybe they figure they'd be happy to take $2000 from
anyone for this on the theory that it will surely be less. Check out:

http://www.rossdist.com/ya.pri

Anyway, have you heard anything about the specifications for the radio
other than what's in the ads? In particular, I'm wondering if there will

be a wide enough FM filter (20-30 Khz) to support high speed digital
satellite use. In order to do this with the 736 we all had to tear out
our
12.5 KHz wide filters and install new ones.

I gather from what I've heard that there is no transverter port? Do you
know how many antenna connectors the radio will have? I notice the
ads say it includes low noise preamps for 2 meters and 70 cm. Have there

been any data published on the noise figure for these? Also is there
any information available about the physical dimensions of the radio?

Sorry to bother you about this sort of stuff, but historically you seem
to
have much better advance information than anyone else.

Thanks!

The RS speaker mic is notorious for that problem. Either use the mic built
into the front of the radio or buy one of the ICOM speaker mics that will
also fit that radio.

Hey, I want in on this deal. I can always use a fast $1000.

The stock factory 350 Chevy small block (1998 Z-28 spec)
achieves a brake thermal efficiency of 38.4% by actual test
cell measurement (SAE measure). Brake thermal efficiency
is the ratio of shaft output energy on a dyno brake to the energy
contained in its fuel (18,000 BTU per pound).

The absolute Carnot cycle limit efficiency for this engine
(assuming no breathing restrictions or mechanical losses
or combustion inefficiencies, which are, of course, impossible
to achieve in practice) is 57.4%. This is the engine's so-called
Air Standard Efficiency. So the stock engine delivers 67% of
the theoretically possible efficiency in converting its fuel's
energy to shaft output energy. And so any claim that efficiency
can be improved more than 33% is bogus on its face.

If the GEET device could actually do what it claims, IE improve
the brake thermal efficiency of the small block Chevy engine by
300%. The engine's brake thermal efficiency would be 201% of
the theoretically possible Carnot cycle limit, thus violating the
basic laws of themodynamics. And it would represent 115.2% of
the total input energy contained in the fuel, which would make it
an over-unity perpetual motion machine.

Since I have faith in the laws of thermodynamics, and I believe
a perpetual motion machine is impossible, I have no doubt that
I can collect an easy $1,000 here.

Hi Dave:

For the most part, digital scopes will do everything analog scopes will....plus a lot more as you and other respondees have noted.

There are cetrtain types of signals that really challenge a DSO however - primarily amplitude modulated RF carriers. In a nutshell, if you run the timebase slow enough to view the modulation envelope, you may end up undersampling the carrier - resulting in an aliased display. Peak detect acquisition mode helps, but the peak detect circuit employed in the TDS200 series isn't 100% efficient and so, can still result in aliasing.

Best regards,

Dave

The Chevy 350 is an even nicer motor than I always played it up to be ... as you know I don't doubt your numbers at all, however, where in the world do you get the effeciency numbers? I have a few other motors to look up. This would have been useful for my posts.

Thanks for the comment. Looking at amplitude-modulated RF carriers is
one thing I do not expect to be doing with this scope. The problem is
that I can't afford a scope with enough bandwidth to look at the
frequencies I'm able to transmit on (e.g. 144 MHz and up). (Yeah,
I know the TDS210 would work for 6 m, but I don't use it).

4230. High voltage dielectric gas

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-12 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfEpqC29.1ps@netcom.com>
Source record: 150636

Picked up a tektronix high voltage o-scope probe a while back - it has provision to be filled with a dielectric liquid/gas/vapor stuff to increase it's HV capability (10kv without, 25kv or so with the stuff).

What is this stuff?

Can you get it anymore, or is it CFC and not available?

Tektronix 454 = $200-$250 in reasonable condition, with usable coverage
well past the 2m band.

No digital storage on the 454, but then you almost certainly don't need
digital storage. Find a 454 for $200 and a 25 MHz 434 analog-storage
scope for another $200, and you will rarely run into a problem you can't
tackle with one or the other.

How about a 9' CB whip (resonant on 11m, < US$25.00 at Radio Shack) on
a bumper mount (Radio Shack again), and an MFJ mobile tuner (about
US$100) to allow you to tune the cheap whip on 6, 10, 12, and 15, at
least.

Source record: 150642

Ready folks, Pete's pickls on what Yaesu is going to replace the 900 with...

1-same chassis as the 757/890/900

2-160-440, definitely...it IS a mobile, after all...

3-DSP in the AF section, ala 920 and 847

4-kiss your manual noch filter goodbye :(

5-IF shift will stay

6-slots for 2 filters, one a Collins (a tighter one than the 2.75kc one, but still "mainstream barn door wide.... I'll pput money on 2.5kc), and one for CW, 500kc)

7-ALL the controls on the faceplate come off when you remove the faceplate, including gmic gain and RF power (which might be replaced with a "toggleable" setting based on a menu.

8-internal tuner, optional at first (cause this rig won't be cheap), standard in 2-3 years.

AND THERE YA HAVE IT. I will be accepting bet money on any or all of these 8 possibilities.... any takers???

Pete -- KA2YDY

Cliff...all you need to do is call MFJ. They will send you the manual and schematic for FREE. I have requested this support from them on a few occasions and they have always been very helpful (even if you don't own the equipment). You can also probably download the manual portion from their website, but not the schematic.

The frequencies are close enough that it is not a problem. I recommend a very good quality antenna of 3db gain and running RG8 coax between the switch and antenna. I have 2m and marine VHF antennas that I interchange at my QTH without a problem.

Yes, but is that taking into account $100,000 for an antenna or renting tower space, buying a transmitter ($30,000), buying a control board, cart machines, microphones, cables, soldering equipment, blank tapes, renting satellite equipment, Marti STLs, transmitter monitoring equipment, modulation monitors, headphones, log books, staff salaries, etc.?

Seems to me there is a lot more to a radio station than "$432 a month."

4258. Ross Distributing Price for 847 - $2000

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-12 00:00:00 UTC
From: John Hansen <hansen@oak.ait.fredonia.edu>
Message-ID: <35074055.7C68@oak.ait.fredonia.edu>
Source record: 150713

Hi Folks,

I noticed tonight that Ross Distributing is now listing a price
for the FT 847. They claim a list price of $2299 and their price
is $2000. I haven't talked to them, but I wonder if this is real
or speculation. The word on the street was that it was being
sold in Canada for the equivilent of $1850 US. I'm not planning
to buy until Dayton anyway, but does anyone have any other pricing
info? This is the first US price I've seen.

4259. Icom 706 MII & Antenna Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-12 00:00:00 UTC
From: fmd100@aol.com
Message-ID: <19980312060901.BAA10359@ladder03.news.aol.com>
Source record: 150714

I am thinking of buying the 706 MII for a company car and would, therefore, need
to use a fairly low profile antenna. My guess is that most of the smaller HF mobile antennas out there have fairly narrow bandwidth. At this point, I'm trying
to determine if the radio/antenna combination I'm considering would require the purchase of Icom's matching antenna tuner at an additional $500+. Are most of those out there using the 706/706 MII using an antenna tuner? Are there any fairly low profile antennas out there which have wide enough bandwidth on 10, 15 and 20 meters so as not to require the antenna tuner?

Did anyone do any informed and qualified research on those magnets round
the fuel pipe (at ?60)?

I read the instructions. IF you followed the instructions you would get
better mileage WITHOUT any magnets nor anything else. Assuming most
people drive uneconomically, which all males under 45 in Edinburgh do
for a start.

Hard to believe, but Scots (and maybe others) pay good money on fuel to
heat their brake linings, whilst keeping their place in the commuter
hatch.

> a month. That's a mighty peculiar notion of "very rich".

We aren't talking about the cost of electricity to run a transmitter!
We are talking about setting up a licensed station which requires
expensive FCC type accepted transmitters and equipment, etc. Also,
there are only so many places and restrictions to where they will ALLOW
you to set up an antenna at that power or higher which brings yet more
expense. How can you think that setting up and running a broadcast
station (with the FCC requirements for operating a 100 watt station)
would only cost $14.40 a month?!

Your example of a radio station is a transmitter sitting by itself (with
no board, CD players, or any other tape machines, etc) in a building
that has free rent and no property tax (possibly a church?) and no
program content going through it.
But even then, you didn't pay the licensing fees, etc, so your station
would not be on the air, in which case it would cost you $zero as the
transmitter would not be using any electricity.

The R10 is a relatively new radio. No replacement in the shadows.

The rebate was to blow out stock for the end of the fiscal year at the end of March. There are $$$ advantages to having a low inventory when you end/start fiscal years.

ICOM also is trying to pump sales figures for various reasons. They have been leaning on dealers pretty hard to keep numbers up and make quotas.

On April 1st, ICOM receiver prices will go up 5% across the board. Some of the coupons and other specials may be extended. Not sure. If you want something ICOM and can afford it now, it would be good to pick it up before the end of March.

Does anyone have the proper modification for the expanded rx/tx for the IC-207H. I have found several, but they conflict. It would appear that cutting D115 expands the rx. One article mentions cutting D118 and D117 for tx. Another mentions also cutting resistor W14???
Would someone please clarify the proper procedure -- preferably via e-mail.
Thanks, Bob (VA3RH)

Graham, the TS-50S should NOT transmit when in CW mode unless:

(1) A key is inserted and depressed, OR
(2) A key is NOT inserted, but the MIC PTT is pressed.

The CW key jack actually has two sets of contacts which are closed when the key IS NOT inserted. Both sets of contacts open when a key IS inserted. When the key is closed, one of the circuits that was broken when the key was inserted is closed for the time that the key is depressed. The other set of contacts stays open all the time that a key is inserted.

I *THINK* that the set of contacts that stays open all the time when the key IS inserted is used to inhibit the unit from transmitting when in CW mode if the key IS NOT inserted. This would be necessary, since the first set of contacts I mentioned above are normally closed when a key is not inserted, which would make the unit transmit if there was not some sort of inhibit circuit present.

I think you must have an open circuit somewhere in the second set of contacts that is used to inhibit transmit when the key is not inserted. It would be my guess that the contacts within the jack assembly are most likely. Try spraying some contact cleaner and repeatedly insert and remove a key plug to "wipe" the contacts. If that doesn't work, unplug and clean connectors CN103 on the FINAL unit and CN16 on the RX-TX unit. The keying circuit passes through these connectors.

The TS-50S is a great little rig, even if it's already been out for five years. I like it better then the competing ICOM and ALINCO rigs.

I'd be interested in knowing how you correct the CW keying problem.

All of the ancillary equipment is required whether you broadcast or
not, IE you could operate a closed system or be a disco DJ without
need of a license, but you'd still need a board, microphones, playback
equipment, etc. Staffing costs are also the same whether you run a
closed system or a broadcast system. So I don't include them in the
incremental cost of becoming an over the air broadcaster. (But the
equipment and staffing costs are very similar to those of *any* other
small business. One doesn't need to be "very rich" to open a mom
and pop store, and that's what most radio stations are.)

The only cost increments to become a broadcaster rather than a disco
DJ are the capital cost of transmitter and tower, the annual license fee,
plus the operating expense for electricity, Since you can amotize transmitter
and tower costs over 20 years, for such a small station, that is a negligible
part of your annual expense. License fees are waived for non-commercial

operations, so your major annual expense to go broadcast is the power bill for the transmitter. If you want to go commercial, the only change is that a license fee is charged, and that's as little as $200 annually, or a maximum of $2,000, depending on your potential audience size. A low power station would generally fall at the lower end of the fee schedule.

Now as I noted, a Class A station is the smallest station the FCC will license. There is a one time fee of $195 to get a construction permit. I won't include that in your annual operating expenses. Your power bill is about $432 a month, or $5184 a year. Add to that the $200 license fee and you're at $5384 a year to become a radio broadcaster. Amortization of transmitter and tower will add roughly $1,000 a year to that, so for $6,384 per year, you too could take your non-broadcast operation to the airwaves as a commercial broadcaster. That is below the US *poverty line*. It is not the province of the "very rich".

Most radio stations are *small businesses*, not very different in their capital and expense requirements from any other small business. They aren't the province of the "very rich". That's simply absurd. And the judge's ruling that it does limit radio broadcasting to the "very rich" is thus also absurd.

I'm interested in the beltclip. Previous promise to send picture was
ignored.
Webpage doesn't seem to be there. How does one get the promised pix?
tnx, miker

4282. WTB: A inexpensive Repeater Controler

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-12 00:00:00 UTC
From: Brian Ward <bward@rrcc.mb.ca>
Message-ID: <01bd4dc8$25633ae0$500d70cc@default.rrcc.mb.ca>
Source record: 150737

I am looking for an inexpensive repeater controler to use on my 6 Meter Repeater. It only has to have Time Out Timer and CW ID. But will look at others. I do not want a kit, nor do I want information about kits. I have looked into these. If you have what I require for sale, please email me with the information.

Thanks,

Brian Ward

I can't speak for the original poster, but the thing that makes me think that
it has
a lithium battery is that the service manual calls it a lithium battery.
Part number UP0215B (BR1225-1VF).
The manual is very sketchy. Looks like it's soldered onto the IF unit.

If you paid $40 for one, you paid too much. :-)

Well, a small station has a $195 construction permit fee and a $200
annual license fee. That certainly doesn't seem "crushing".

>> But in fact the FCC doesn't license anything less than a Class A station
>> anymore. That's 3 kW, and that costs about 60 cents an hour, or $432 a
>> month. That's still not what I'd call "very rich", but it is a bit heavy for a

>how much it costs to _file_ for broadcast bandwith! Krikey! At least two
>Kilobucks just to file! Yow!
>
>When you add in lawyers fees and engineering reports *whew*.

You only incur those sorts of costs if you are moving to amend the
table of allocations for your community. If you file for a channel that
is already in the table of allocations (and there are a number of them
for which there is no currently operating station), you incur only a
$195 fee. For example, if you want a Class A in Covington Georgia,
there's an open allocation there waiting for you.

The vast majority of radio stations are *small businesses*. They are
little different in their expense and revenue streams from any other
small business, like a hair saloon or an auto body repair shop. They
definitely are *not* only the province of the "very rich". That's simply
absurd. Only major stations in major markets start to approach the
sort of level of investment of a McDonalds franchise ($1,000,000)
or of a family owned department store. And even that isn't what I'd
call the province of the "very rich". (The very rich own Walmart, or
a certain software company in Redmond Washington.)

If your business plan is sane enough to convince the bank to back you in opening a coin laundry, then you could also open a small market radio station. The levels of investment required are similar. Now if you're going to tell me that puts you in the league of the "very rich", your idea of rich differs considerably from mine.

Yep, that's about right.

>I don't think so.... First, that is RF power not electrical power.

Yeah, I figured 50% efficiency in the transmitter.

>Second,
>there are things like *equipment* (some of which is *mandatory*)

That's capital budget, not operating expense. About the only thing
that is still mandatory, aside from the transmitter itself, is an EAS
receiver. That, like the transmitter, is a capital item and can be
amortized over a 20 year period. That's only pennies a month in
the operating budget.

You can listen all you want until you get your license - just can't talk.

I don't know about your area, but where I live the bulk of the activity is on 2 meters. Also, people are less likely to come back to a general call on 440 than 2 meters. SO - bottom line - I would get the 2 meter HT.

(edited for space)

Paul,

Unless you're determined to build one, why not try to find a used VHF
pager somewhere in that band and recrystal it to the freq you need. A
lot of times, you can pick up a used pager for $15.00 to $20.00, and a
crystal should cost somewhere between $15.00 and $30.00 max.

Good Luck!

4307. FS DX-100 & HQ170

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-13 00:00:00 UTC
From: imok1@aol.com
Message-ID: <19980313232100.SAA14155@ladder03.news.aol.com>
Source record: 150512

I have for sale a DX-100 and HQ-170. These items were purchased and I have not had time to get to them, so I hope someone can use them.

DX-100 - Good shape, original cabinet repainted, but no extra holes. It looks like there are two non original knobs and one no original togle switch, no extra holes in the panel. Electrically untested as had no time to bring it up on a variac...
$125 - prefer chicago area deal as 100# +
HQ-170
It plays.... A couple on non original knobs, no extra holes in cabinet or panel. no clock. The chassis has a little bite so would need some minor TLC.
$160 - plus shipping from 60067.

Thanks
Mark

Benjamin-

I've been using an AT-11 that I built for about a year now. Very rugged and reliable. Nice people to deal with also. I highly recommend the AT-11.

Earlier models (mine included) have a slight problem with a birdie in the 10m band, although there is a fix for this. I just haven't gotten around to getting the upgrade. The kit was fun to build also, but they woill sell you an assembled model as well.

Probably the two best are the screwdriver (motorized coil)
and the bugcatcher. Bigger is better, especially in 40 and 80
meters. I use the hustler, but it is useless on 80M.

If cost were not a factor, I'd get one of those really tall construction
cranes, put big beams on top
and hire someone to put it up/down for me...:-)

But seriously...It depends on where you drive. I solved my antenna
problem by putting up a 440 repeater
with remote base. Now I get more HF range than I could ever get with a
mobile antenna.
I do have a screwdriver on the motorhome since I drive it out of range of
the remote.

Hope you did not mind me putting my 2 cents in there. I just thought that people needed reminding how good this product is.

BTW, which model was it. I have the one with the LCD. Our ham club got a deal if bought so many, the price was $69 each (don't ask who we got that thru, I do not remember).

> also fit that radio.

Hi Dick - I just bought one of these radios at the unbeliveable
close-out price of $69.95. There is no built-in mic (it's not
an HT). But my question is, how does one decrease the low-power
(10W) setting? That's way too much for my needs (10th floor
apartment within view of the Diamond Head rptr). I've scanned
the schematic looking for a variable pot near the final stage
that would adjust say, the B+ going to the final, but nothing found.
Support@tandy.com was of no help ("Users are not allowed to make
any modifications to FCC certified equipment" or words to those effect).

Jeff KH2PZ / KH6

4334. HT stolen. Buy IC-T7A, FT-50RD or THG71A?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-13 00:00:00 UTC
From: Mark Harris <mharris@mcs.net>
Message-ID: <3509722C.1433@mcs.net>
Source record: 150561

My Icom T7A was stolen from work along with the cig lighter cord, 3 antennas (including my AEA 2m Hotrod, which I cannot replace), mike, battery case and a roll-up J-pole.

As I will be starting from scratch again (if they had just taken the radio, I would buy another IC-T7A) I would like to hear suggestions.

Icom IC-T7A
Yaesu FT-50RD
Kenwood THG71A

Are the three models I am considering.

Any fans or cheerleaders for these models?

Thanks!
Mark

Sensible advice, if followed with EXPERIMENTAL investigation.
I have read this whole off-topic thread, because it would make a hell of a
power-boost for field day and the more serious scenarios that we train for,
but in reading this thread, I have seen NOT ONE SENSIBLE answer
outside your post.

All the other answers I have read sound like the stuff I got when I said I had
made a radio that had transmitted music on a 100 Hz bandspread.

It sounds also like the injunction argument that broke Lee DeForest.
You may remember reading about him. He claimed to have invented
a thing (he called it an AUDION) which could amplify audio.

The court agreed with the arguments by the supposed authorities of the day,
who hadn't assayed the subject, but had just read it and decided it didn't work.

We call the Audion tube (valve) a Triode, today.
All CRT tubes on TVs and PCs are descended from the man who was ordered
by the court to stop selling AUDION bottles.

You sound like you are trying to join the few who do think, and I commend
you for it.

Me, I always get a headache when I try to think.

That may be why I can't sell my inventions. See my URL.

Good luck

Hi there
I have for sale a brand new Kenwood TM-261A 2 meters mobile radio
for sale. It covers 118-174 in receive and 136-174 on transmit. Comes with
all
original accessories and boxing. Still on warranty for at least 11 months.
Selling because I bought a dual band. Will ship it insured to your door for
$200. U.S. Please reply by email.

You have a Syntor. The combo number tells all, but unfortunately I
don't have my cheat sheet which decodes it handy here. Order a
manual for the radio (the manuals are still available), and it will
tell all.

>Only the obscenely rich can afford to sell Big Macs.

No, just someone with a good credit record with his bank. You've obviously never operated a business. The idea is to do it with *someone else's money*. No one puts up $1,000,000 of their own cash to get a McDonalds franchise. That's stupid. You borrow the money based on your business plan, and pay it off out of operating revenues. Your take home after expenses the first several years may put you near the poverty line. If you *had* a million dollars, you could let it draw interest and make a bigger income without having to work 120 hours a week. Selling Big Macs is a way to (eventually) become moderately well off, but you don't have to be rich to start.

It amazes me that people can actually finish high school in this country without a grasp of business economics.

Source record: 150583
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,oh.forsale,us.forsale.misc,us.forsale.d,misc.misc,us.misc

For Sale

GE Master II radios 144 to 160 Mhz.

Some have PL encode/decode 100.0/146.2

50 Watt transmit .5 uv or better receive. (ALL WILL BE CHECKED BEFORE

THEY LEAVE HERE THERE WILL BE NO DUDS).

Some may come tuned in the ham band as I have done this to a few to make

shure they work well there.

Currently on Goverment frequencies but tune to 2 meter ham verry easy.

Each package contains:

One radio.

One control cable.

One control head 8 channel.

One microphone.

One speaker.

One transmit/One recive ICOM without crystals.

One PL incode/decode board and hook switch as available.

If you buy 5 or more (limit 25 as that is all I have) you

will receive a compleat service manual.

The cost is 75 dollars plus shipping FIRM!

Crystals can be installed for one frequency tx/rx for 40 dollars.

You are responsible for any additional ICOMs and crystals as there

are not enough to do more. If you order the one channel installed

you must wait 4 to 6 weeks for me to order the crystals from my supplier

and them to ship them to me. The time can be shorter but the

supplier raises the price to me and I to you.

If you want to order your own crystals and install them your self

you can order them for 10 dollars each (20 dollars a pair 1 tx / 1 rx)

from:

Hy-Q International

1438 Cox Ave.

Erlanger KY. 41018

606-283-5000

COD or money orders only no credit.

DO NOT buy JAN or BOMAR crystals as they are shipped off frequency

and usualy fail within 6 months.

Any repeater mods you want are up to you to do.

All orders and shipping are to be handled through Rich KA8CMK at Big_Red_One@Juno.com

way he want's to do it.

Thank you for your time

Wayne L. Anderson

>would have been useful for my posts.

The Z-28 numbers come from actual measurements in a test cell (dyno).
We were baselining the engine for a showroom stock class car. Air
Standard Efficiency can be calculated using formulas in "The Design
and Tuning of Competition Engines" by Philip H. Smith. The energy
content of fuels can be obtained from the CRC Handbook of Chemistry
and Physics. Drag calculation formulas are in the Bosch Automotive
Handbook (which also has the fuels data, and Cd numbers for a cross
section of vehicle bodies).

The Otto cycle engine powered auto has been around for a century. It is
a mature technology. There is plenty of engineering data available for it.
Unfortunately, wild claims like those being made by GEET have also been
around for nearly a century. And they have remained claims, because they
are not based on reality. They are either outright fraudulent scams, or the
work of some enthusiastic amateur inventor who doesn't understand
thermodynamics or how to do careful quantitative measurements.

Even if it DID cost the same as a small business (which it does not) if
everybody could afford to start a small business, then no one one be an
employee of another company. Everyone would have thier own company.
Truth is, it is very expensive to buy, and even more difficult to start
a new station at the current requirements. However, starting a small 1
to 10 watt station in your home would be as inexpensive as starting up a
Ham radio station. The fact that even a Judge realizes this and is
not letting the FCC shut down that California "Pirate" shows that there
is obviously some logic to this.

>Sven, SM5PXK

Hi Sven,
I've had the MFJ-931 for approx 18 months now, and I think it's a
good
investment. My shack is also on the second floor and although I could get
a wire to a ground stake, I still had problems with stray RF around the
shack.

The problems have almost disappeared since I started using the
Artificial ground unit! I can even use 20M without TVI :-)

There is no limit to the amount of hair salons or auto repair shops that can be set up in any area, but at a high transmitting power that takes up a channel frequency for many miles, it limits how many stations can be set up in any location. There can be NO NEW stations set up in my area and many others, so I would have to pay millions for one of the existing licenses! If however, small 1 or 5 watt stations could be set up in the 88.1 to 91.9 band, there would be space for a lot more micro stations that could be started for little money.

You obviously didn't have "new math" taught at your high school! ;-)
I have been running and subsisting on my own bidness for five years now,
it has given me fantastic sarcasm sheilding.

I believe you are oversimplifying. I will admit that I have not started
a radio station- yet. However, the research I have been doing (consisting
mainly of picking the brains of a successful station owner in my area and
scoping the FCC website) have given me a different set of numbers
entirely. Larger ones. Perhaps a few years in the business would give me a
different perspective, but right now the filing costs seem more than a
little prohibitive.

Source record: 150595

WANTED: Collins 51J4 or R-388A; Collins KWM1 or R-390A
OR SIMILAR COLLINS OR MILITARY UNIT

Wish to pay a fair price for a unit in good physical &
operational condition with original meters &/or covers with
standard accessories. Will consider other Collins unit or
military versions with similar specs for same application as
well.

Email with details.

Have Hewlett Packard Laser Jet II printer could swap as
well. Can provide details on HPLJII if you're interested.
This is one of HP's most desirable/dependable printers and
least expensive to operate. Supported by Windows 95 as
well.

Thanks

Kyle-
not a bad rig to start out with if the price isn't too bad. I've had
good results with mine, both on ssb and cw. Easy to learn, compact
size. Seen them at hamfests anywhere from 425 to 600, depending
on condition.
Good Luck
Leon KG9KH

Good Job !!! I also saw the price on the Associated Radio Web page plus
a price of
$ 1799 for the IC-746. Expect the price to come down $100 to $200 like
all other radios out there after 6 months.

Here ya go... straight from the horses mouth:

de.KA2YDY

IC-765

This information is taken directly off of the ICOM IC-765 brochure.

IC-765 SPECIFICATIONS

GENERAL

Frequency Coverage:
Receive: 0.10000 ~ 30.00000 MHz
guaranteed range 500 kHz ~ 30 MHz
Transmit:
160-m band 1.8 ~ 2.0 MHz
80-m band 3.5 ~ 4.0 MHz
40-m band 7.0 ~ 7.3 MHz
30-m band 10.1 ~ 10.15 MHz
20-m band 14.0 ~ 14.35 MHz
17-m band 18.068 ~ 18.168 MHz
15-m band 21.0 ~ 21.45 MHz
12-m band 24.89 ~ 24.99 MHz
10-m band 28.0 ~ 29.7 MHz
Modes: SSB(A3J), CW(A1), AM(A3), FM(F3), RTTY(F1)
Number of memory channels: 99 plus P1 and P2
Antenna impedance: 50 ohms (unbalanced)
Usable Temperature Range: -10ï¿½C to +60ï¿½C; +14ï¿½F to +140ï¿½F
Frequency stability: Less than ï¿½200 Hz from 1 min. to 60 min. after
power ON. After that, the rate of stablity change is
less than ï¿½30 Hz/hr at +25ï¿½C; +77ï¿½F. Temperature fluctations (0ï¿½C to
+50ï¿½C; +32ï¿½F to +122ï¿½F) less than ï¿½350 Hz.
Power Supply Requirement: 100 ~ 117 V AC (U.S.A. version); 220 ~ 240
V AC (Australia,Europe,France versions)
Power consumption:
Transmit: 250 VA (at minimun output); 650 VA (at maximum output)
Receive: squelched (1.3 VA); at maximum audio output (80 VA)
Dimensions: 424(W) x 150(H) x 390(D) mm, 16.7(W) x 5.9(H) x 15.4(D)
in (projections not included)
Weight: 17.5 kg; 38.6 lb.

Transmitter

Output power:
SSB, CW, FM: 10 to 100 W continuously adjustable
AM: 10 to 40 W continuously adjustable

Modulation system:
SSB: balanced modulation
AM: low power modulation
FM: variable reactance frequency modulation
Maximum frequency deviation: ï¿½5 kHz (FM)
Spurious emissions: More than 60 dB below peak output power
Carrier supression: More than 40 dB below peak output power
Unwanted sideband: More than 55 dB below peak output power (at 1000
Hz AF input)
Microphone impedance: 600 ohms
DTX variable range: ï¿½9.99 kHz

Receiver

Receive system: Quadruple-conversion superheterodyne
(SSB,CW,AM,RTTY); Triple-conversion superheterdyne
(FM)
Intermediate frequencies:
Mode
1st
2nd
3rd
4th
SSB
69.0115 MHz
9.0115 MHz
455 kHz
9.0115
CW,RTTY
69.0106 MHz
9.0106 MHz
455 kHz
9.0106
AM
69.0100 MHz
9.0100 MHz
455 kHz
9.0100 MHz
FM
69.0100 MHz
9.0100 MHz
455 kHz

Sensitivity (preamp ON):
SSB, CW, RTTY (for 10 dB S/N):
0.1 ~ 0.5 MHz Less than 0.7 ï¿½V
0.5 ~ 1.8 MHz Less than 1.0 ï¿½V
1.8 ~ 30.0 MHz Less than 0.15 ï¿½V
AM (for 10 dB S/N, narrow filter selected):
0.1 ~ 0.5 MHz Less than 4.4 ï¿½V
0.5 ~ 1.8 MHz Less than 6.3 ï¿½V

1.6 ~ 30.0 MHz Less than 1.0 ï¿½V
FM (for 12 dB SINAD):
28 ~ 30 MHz Less than 0.3 ï¿½V
Selectivity:
SSB: More than 2.2 kHz/-6 dB; Less than 4.2 kHz/-60 dB
CW (narrow), RTTY (narrow): More than 500 kHz/-6 dB; Less than 1 kHz/-60 dB
AM: More than 6 kHz/-6 dB ; Less than 18 kHz/-50 dB
FM: More than 15 kHz/-6 dB ; Less than 30 kHz/-50 dB
Audio output power: More than 2.6 W with an 8 ohm load at 10% distortion
Audio output impedance: 8 ohms
RIT variable range: ï¿½9.99 kHz

Antenna Tuner

Input impedance: 50 ohms unbalanced
Output matching range (when tuner switch is ON): 16.7 ~150 ohms (unbalanced)
Waiting time for band changing: Less than 3 seconds
Auto tuning accuracy: VSWR 1.2:1 or less

IC-765 OPTIONS

IC-4KL 1 kW HF LINEAR AMPLIFIER: An advanced new all-solid-state amplifier equipped with a fully automatic
antenna tuner.
CR-282 HIGH STABILITY CRYSTAL UNIT: Contains a temperature-compensating oven heater and crystal unit for improved frequency stability. (ï¿½100 Hz, -10ï¿½C ~ +60ï¿½C; -14ï¿½F ~ +140ï¿½F)
CT-16 SATELLITE INTERFACE UNIT: Easy tuning for instant satellite communications using an Icom transceiver.
CT-17 CI-V LEVEL CONVERTER: For remote transceiver control using a personal computer. Equipped with an
RS-232C output port.
EX-627 AUTOMATIC ANTENNA SELECTOR: Allows connection of up to 9 separate antennas to the IC-765.
The most suitable antenna is automatically selected from up to 7 antennas when the operating band is changed in the
IC-765. Manual selection is also possible.
FL-53A CW NARROW FILTER (455 kHz, 250 Hz/-6 dB)
FL-101 CW NARROW FILTER (9.0106 MHz, 250 Hz/-6 dB) These filters have good shape factors and provide
you with better CW reception when band conditions are crowded.
FL-102 AM FILTER (9.0100 MHz, 6 kHz/-6 dB) This filter has good shape factor and provides you with clearer
broadcast reception.
MB-19 RACK MOUNTING HANDLES: Transceiver mounting handles for a 19-inch mounting rack.
SM-6 DESKTOP MICROPHONE: Easy to use desktop microphone for base

station operation.
SM-8 DESKTOP MICROPHONE: UP/DOWN switches included. Can be connected to 2 Icom transceivers.
SM-20 DESKTOP MICROPHONE: High-quality microphone with a heavy, stable base. Equipped with a low-frequency cut capability.
HM-36 HAND MICROPHONE: Includes UP/DOWN switches for scanning.
SP-20 EXTERNAL SPEAKER WITH AUDIO FILTERS: High performance speaker including 4 audio filters for greater sound quality. Style and size are matched with the IC-765 (8 ohms/5 W)
UT-30 PROGRAMMABLE TONE ENCODER UNIT: Subaudible tone encoder for accessing a 29 MHz FM repeater. All programmed tones are available.
UT-36 VOICE SYNTHESIZER UNIT: A clear, electronically generated voice announces the displayed frequency in English or Japanese.

Copyright 1995 ICOM AMERICA, INC. All specifications and options subject to change without notice or obligation.
NOTE: All specifications are for U.S.A. versions. For specifications in other countries, check with your ICOM Dealer.
Some options may not be available due to local regulations.

I moved some of my junque but still have some more. You know you need this:

Icom CM35 commercial charger for large batteries (BP7, BP8, etc.) same as the BC35 charger. OK condition, no manual, $50 shipped to lower 48.

W&W Mastercharger, same as above for Icom batteries, has interchangable charging cups for other batteries. VGC, $60 shipped to lower 48.

BP8 Super battery from W&W, new condition, $45 shipped to lower 48.

Iomega 125/250 external tape drive with software, manual and tape. $35 shipped to lower 48.

IBM PC Jr. keyboard, new-in-box, $15 shipped to lower 48.

Universal Data Systems modems, 1200/2400 with documents, make offer + shipping.

Midland UHF handheld, 16 channels, PL encode/decode, 5 watt, new condition with 13.2v 1000mah battery, manual, service manual, no charger. $200 + shipping

Thats all follks. Will swap for other first class junque.

I need 16mb nonparity simms (2), Pentium CPU up to p166, EIDE harddrive,

>Me, I always get a headache when I try to think.
>
>That may be why I can't sell my inventions. See my URL.
>
>Good luck
>
>Lou H.
>http://www.geocities.com/capecanaveral/hangar/6578/index.html
>Prolific inventor,
>Lousy Salesman,
>Incompetent businessman.
>(Typical of the Breed)

>Looking for both around
>Tulsa OK, USA
I'll go check it out.
PS. Gary, I made my 1000 buck offer in good faith to only one person and if you flash back you'll see that it was on the condition he go see a GEET processor in operation with his own eyes fitted to a internal combustion engine, one of the GEET 5kw generators will also be included in the offer, and yes, I'll let you put a full 5kw load on it then connect it up to the dyno.
Go see it in the flesh, then come back and make us laugh.

Phil G4ZOW

PS. I'll leave with a nice anecdote:
When cold fusion can produce_reproduceable_ results seen by many researchers, then it will be accepted, just like plate tectonics and the existance of meteors.
But not until then.

Don't think I'll be spending 1000 dollars this week.

>
>1-same chassis as the 757/890/900

If it were to be a copycat competition to the IC-706, then the chassis
should be smaller than any of the above.

>2-160-440, definitely...it IS a mobile, after all...

Still not including 220MHz? If the 947 includes 70MHz TX/RX for
British band plan, why leave it out?

>3-DSP in the AF section, ala 920 and 847

I hope it's not an add-on like the IC-706 MKII

>4-kiss your manual noch filter goodbye :(

Amen!

>5-IF shift will stay

Amen!

>6-slots for 2 filters, one a Collins (a tighter one than the 2.75kc one,
>but still "mainstream barn door wide.... I'll pput money on 2.5kc), and
>one for CW, 500kc)

500kc CW? I'll place my first bet if it is not a type. Hi hi.

2.5kc on SSB is __VERY WIDE__, but this trade off makes the signal
sounding good! Can't count on AF DSP because, like my FT-920, the
2.4kc SSB suffers from AGC pumping quite a bit when the condition is
bad. 2.1kc is more resonable for mobiles that use vertical most of
the time.

>7-ALL the controls on the faceplate come off when you remove the
>faceplate, including gmic gain and RF power (which might be replaced with
>a "toggleable" setting based on a menu.

The only logical way to handle a mobile rig is have the ENTIRE
faceplate be taken off. Putting MIC gain in the menu is a good pick
(only if you use the same mic all the time), but I have a problem with
RF gain in the menu. It might be acceptable to use the automatic
antenna tuner, but what about tuning up your linear amp?

I think that a lesson can be taken from the TS-570. A multi-function knob to control SQL, RF gain, MIC gain, AF gain, IF shift, NR, and etc. Toggling through these functions via a single button, with CW announcement. This can make the control really shines during mobile.

>8-internal tuner, optional at first (cause this rig won't be cheap),
>standard in 2-3 years.

ICOM is pretty good at lowering their price when facing competitions. If the copycat wants to take off like the IC-706MKII did in the first place, it must prove itself to provide better value to justify the increased in price on customers.

>AND THERE YA HAVE IT. I will be accepting bet money on any or all of
>these 8 possibilities.... any takers???
>
>Pete -- KA2YDY

Or they might fall into the category of the FISH (sp?) carburetor. Many of the
people who tried to get one back when had their orders returned by the USPO
marked "fraudlent". My father got such a reply.

The brother-in-law of Fireball Roberts worked in a machine shop in Fla, and
would show anyone that wanted to see it, how he had a Fish and an Offie carbs
on his car.

He said Fireball had had 2 fishes on his racer but they were stolen, so he came
and traded SuperChristian an Offie for one of his.
I learned of this from when I said that the "suppressed invention" myths were
just that. I offered the Fish Carb as an example. The overweight guy at a
machine said that the existed and told the story.
I asked another guy if the fat bou knew what he was talking about.
"He should," was the reply, "he's Fireball Robert's Brother-In-Law."
The man said he had seen the Fish carbs in the Bonneville that the Bro-in-Law
drove.

But we all know that hose suppression stories are just myths.
Read a history of Brig Gen David Sarnoff, who was as bad a robber baron as
any that ever fortified a hill in medieval Europe.

The Fish Carb can be found in the Patent Office doc's.
It's a boiloff tech.

The HEI, or High Energy Ignition, I think i've already said on this thread, was
another thing like GEET when it came out. Now you buy a new car, and it is
there already. The HEI was being sold in fairs and carnivals, For God's Sake,
to try to recover the money the guy had in patenting it.

Back to GEET: People, try to keep an open mind. Investigate for yourself.

Almost every breakthrough in history had been Poo-Poo-ed by people who
later said they were some of the first to recognize the wonderful new thing.

Read the history of OTTO, who started the whole thing. Same story.
Read the stuff at my URL. Same-oh, Same-oh.

Sheesh.

>of devices (standard of course).

WILD ! ! HOW CAN I PASS UP SUCH A GENEROUS OFFER ? ?
Easily. If I put years into something, I want something out of it.
My ego does not require your approval, but if you want to come to Tulsa and
work on it with me, after signing suitable protective documents and then
help me get the financing to build and patent and prove and sue the sox offa
the thieves, then,
COME ON ! !

One of the hallmarks of any prolific inventor is paranoia. It is a result of
bitter experience. I have had several inventions stolen from me.

I got better sense now.

>>All the other answers I have read sound like the stuff I got when I said I had
>>made a radio that had transmitted music on a 100 Hz bandspread.
>
>Another good one. Ever heard of the Fourier Transform? Try it sometime. Reread my
>offer.

FFT is a wonderful thing if you have the numbers to plug in, but if the numbers
don't exist yet, where they gonna come from? Experimental Data, thet's where.

"Oh, that use scientific fact, and what the elegant word,
"Against unmitigated event that actually occurred?"
I built one. It worked. Then I tried to tell it to radio club, and was told it
can't be.
I had to sell the parts when I went broke, about '78, for rent money.
Lotsa inventors are like me. Sad, that.
>

>> It sounds also like the injunction argument that broke Lee DeForest.

>less take over and prevent you from thinking by giving you a headache.
>
>Now, please, trully start thinking!

I'll try, I really will. I promise, even if it gives me a headache, like it
always does. Meantime, you might like to look up Fred Teal's brother, Gene, who
is a lot like me, but he did his thing with rejetting a carb, so lean you
wouldn't think it would run, and took it to ffairs and all he got was people
trying to steal it from him. There is an annual inventors fair, in some place
like Lenora or Lenexa Kansas, way out west of the state. He was there several
years running. His brother Fred has/had a farm in that area, why I mentioned
him. You might find him on the net, even.
>
>> The court agreed with the arguments by the supposed authorities of the day,

>>
>
>I'm sorry, but that guy has not thought a bit, nor has the president of GEET, nor
>has the guy who built the thing, except for turning a profit from people who aren't
>engineers. And finally, neither have you. I don't deny that inventors can come up
>with some impressive stuff, but the fuel processor is not one of them. And looking
>at your homepage, you have alot of bogus stuff also. If your idea is so impressive
>about the pulse engine, try it on a supercomputer.

BETTER YET, TRY IT IN A WELDING SHOP.

>I'm sure someone can throw away
>the money for you to try it, if your proposal was well worded. Heck time is so
>cheap now, it really doesn't have to be That reasonable. These simulations are
>completely impartial, applying only the laws of physics that seem to apply to every
>other thing on the planet. Would you maintain that there is a better laws of
>physics? Then that could be tested too. Establish them, program a new simulator,
>then simulate your engine. Then plug in a real everyday engine. The fact that the
>real engine no longer runs should prove enough to you.
>
>David Pearce - KF4MOK
>dlpearce@eos.ncsu.edu

Then laws of fizzix is revised all the time. Sheesh.
Inventors are doing stuff all the time, which later gets first derided and then
applauded by authorities.

Hell, man, I have enuff computers around here to run failure predictions on,
but all that means to an inventor is that there ain't enuff math in the model.
That don't need a Cray. It needs math the Cray ain't got neether, by gar.

I am reminded of the thing a sailor kinfolk told my mom, for her to put in the
book she never finished. They had a huge thump on deck once during WW2,
and huge thumps tehn were very suspect, so lotsa people including the captain,
went running to see. The boat was in harbor at the time.

There were potatoes all over teh deck.
There had been an argument whether one could dive off the masthaed,
and they decided to do it scientifically first, and throw the sack of potatoes.

The captain said that would happen to anyone who tried it. He called for the
sailor who thought it up, and was told the man was being fished out of
the water even at that time, because he didn't believe in that scientific stuff.

Bogus, like many other things, is in the mind of the Bogee.
The assay test beats theeeries every time.
Sheesh.

Fry's in Wilsonville, OR had both models when I was down there yesterday, and it caught me by suprise... Those are SMALL! The 2m version had a working battery in it, so I turned it on. OK, I can sort of figure out the controls. It starts scanning and I get to the freq for a local repeater(146.96 which is around Portland). After waiting a while, the squelch breaks. Unfortunatley, these little radios have no room for a speaker, so I can't tell how well the signal is coming in or what the audio quality is like :-(But my Pro-60 can barely hear that repeater from about the same location using the rubber ducky antenna from my TH-205, so it can't be all that bad considering the incredibly small antenna. Something I noticed is the appearant lack of volume and squelch controls, although they must have been somewhere. IIRC, these radios have an output of 300mW or so, so they definitley won't do a lot, but they look like fun. Has anyone had a chance to try these little things out? I'd love to hear any comments about them.

For a little bit more you can get a dual bander, you may run into cross band links that go to 6 or 10 meter fm which will enable you to talk thousands of miles on these bands. Since remote bases are only allowed on 220 MHZ and above the 440 band is popular for 6 meter and 10 meter fm remote bases, and yes even if you do not have 10 meter fm privileges you can work it through a remote base on a band you are licensed to operate on.

Yes it is a fully programmable from the keypad version, IE just like your ham ht, unfortunately the radio can only be set for one CTCSS tone at a time IE it is not programmable by memory, although you can program any of the usual CTCSS tones the radio does not remember the tone by memory channels it only remembers a global tone that applies to all aspects of the radio IE it must be changed by the user if you use different tones for different freq's. The CP50 however is fully programmable from the keypad and this includes the CTCSS tones IE you have the same capability as your standard ham HT.

My friend is a ham who just passed away. He had just ordered and received a U.S. Towers 70 foot
fully motorized crank up tubular tower.It includes the indoor control box to raise and lower the
tower automatically .It is brand new and was not installed.He payed $6000+shipping.His wife would
take $4000 . You can call me at 516 486 1861. We are in New York on Long Island. KB2VX Rob.
qin2@aol.com. thanks I have all paperwork and receipt

4405. Want to build single channel nbfm receiver (147.240 Mhz)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-13 00:00:00 UTC
From: ptcarter@ingr.com
Message-ID: <6ec4p1$mc6$1@nnrp1.dejanews.com>
Source record: 150681
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.amateur.misc

Hello-
I have a need for a single channel (need to monitor a repeater-147.240 MHZ) and am looking to put together a simple circuit to listen to only that frequency.(note- I am a no-code tech and I have friends who hang out on that repeater). I'm looking for something light (i can put in my pocket or on my belt, with a earphone)and as simple as possible. Has anyone put one together that can tell me the difficulties and the cost. I've been reading the news archives and stumbled on the MC3363 from motorola which seems like the best solution. If you have experience with this IC or if you know of a simpler path to achieve my goal, please let me know.
I read the app notes (AP980) from motorola. Here are my concerns. First off, it said not to breadboard this circuit, but to use copper traces because occllations will occur. My only tools are a soldering iron, a simpson meter, and some Radio Shack PC board. Will this be a problem? I have pretty limited electronic skills and test equipment. Also, the notes say I can flip dip switches and get 256 2-meter frequencies. This is cool, but I only need one. Can I use a crystal instead? Has anyone a shematic that will make this reciever work? Any push in the right direction will be appreciated.

Thanks,

Paul Carter KF4JIR

4406. AT-11 auto tuner??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-13 00:00:00 UTC
From: KF4KJF@qsl.net
Message-ID: <350c8b19.23412732@news.icanect.net>
Source record: 150682

Is the AT-11 by LDG Electronics too good to be true? Seems to have a lot more range than other auto tuners, from Yaesu, Icom and SGC? And its a lot cheaper! Anybody?
73's,
Benjamin Blavat, KF4KJF

> don't exist yet, where they gonna come from? Experimental Data, thet's where.

It gets better, I see. No, you see, the Fourier Transform predicts exactly what happens in a circuit on a frequency chart. You feed in the numbers and the function your circuit performs, and out comes the frequencies that will exist in the output.

I'll sign a non-disclosure agreement and simulate it, for free. We have a deal? Theoretical designs even have a much greater chance of working in a electrical simulator than real life. So I'm giving you the benefit of the doubt.

> MY POINT EXACTLY.

But there is no proof of geet. I don't plan to rehash that again. Just read my previous post.

> I'll try, I really will. I promise, even if it gives me a headache, like it
> always does. Meantime, you might like to look up Fred Teal's brother, Gene, who

> him. You might find him on the net, even.
>

But it wasn't any sort of magic. It was still a carb. A fuel injection system can be programmed to run a car at the very edge, probably alot leaner than your friends carb, but what would be the point? No power equals no use, and thats exactly what you get when running lean.

> One of us needs to think, one of us really do, I swear.

A motor can't run water because it improves gas exit or entry of the engine. There is the energy content factor, that you seem to overlook. What about otto cycle maximum effeciency presented by Gary? Even if you had external pumps sucking the gas from the engine, it couldn't achieve the effeciency noted by GEET engineers. Plus, anything that draws power from exhaust will inherently stall the gas flow more. Even turbos, wonderful devices they are, increase backpressure within the exhaust system. Exhaust tuning is limited to certain engine speeds, but again, it doesn't give a engine liscense to burn water.

> BETTER YET, TRY IT IN A WELDING SHOP.

Well, we are waiting ..... just make sure it fits in a standard mount so it can be hauled off an analyzed in a real test environment environment. Make everyone sign non-disclosure agreements. I am not ridiculing pulse jets, just your design.

> Then laws of fizzix is revised all the time. Sheesh.

> but all that means to an inventor is that there ain't enuff math in the model.
> That don't need a Cray. It needs math the Cray ain't got neether, by gar.

I take it you have never seen a modern parallel computer running a modern fluid dynamics procedure. Its pretty dang accurate, actually. Modern engines that run in real life, run in these simulations, and nowadays, simulations are what the real life devices are based on. IF you rewrite the laws of physics after finding your engine works, in real life, then the previous engine designs should also work in the simulation. I think computers have changed alot since you purchased your last.

John N2JI Phone (914)-969-4676 (Yonkers NY).

Collins 32S1 Transmitter for sale

100 watt transmitter 10 meters thru 80 meters.
All tubes in good condition.

(Spare tubes available but not included).

Includes Collins 516F2 Power supply

Will sell as individual items BUT must sell the Transmitter first!

Transmitter $350 Power Supply $175 Both $500 (FIRM).

Reply by phone I do not have email a friend is posting this for me.

John N2JI Phone (914)-969-4676 (Yonkers NY).

this is an excellent condition 3 piece null volt test set. it contains:
galvanometer, power supply, and voltage divider
this was made for the us army camp evans signal laborotory.
all are in the original wooden case. and the felt that holds the equipment in
place is all perfect. for those of you familiar with this stuff this is quite
a find
e-mail me if interested.

Hi Lou,
I tried dialling up your homepage to no avail, I'll try again.
You, and any other interested, read that as open minded, parties may
want to check out possibly the best of the independant GEET sites @:
www.friend.ly.net/GEET/
There's a fair bit of interesting reading so I suggest you download and
read offline. Click on the 'Famous inventions' link as well, this really
backs up what Lou has just pointed out about every uninformed persons
knocking the poor inventor without bothering to do their own independant
research.
>>The Otto cycle engine powered auto has been around for a century. It is
>>a mature technology. There is plenty of engineering data available for it.
>>Unfortunately, wild claims like those being made by GEET have also been
>>around for nearly a century. And they have remained claims, because they
>>are not based on reality. They are either outright fraudulent scams, or the
>>work of some enthusiastic amateur inventor who doesn't understand
>>thermodynamics or how to do careful quantitative measurements.
I do believe they are talking plasma physics.

OOPS! Mea culpa.

Low audio is such a common problem on the 202 w/ speaker mic, with the 212
often exhibiting just the opposite problem, I put my keyboard in gear a bit
too quickly.

Sorry for any confusion.

73, Dick

Hello all,

I have started a 50.400 AM net on Friday nights at 19:30 PDT.
It is run from Saugus Ca DM04rk by KC6WFS Dave Booth.

I'll be using a Gonset G-50 to a ARX-6.

If you live in the local area please join in on the net.

Thanks,

Dave Booth KC6WFS DM04rk

Programs are available from download sites that will control your rig. Icom
also has a reference manual that gives details of the control scheme.

It is easier to change the radio by software methods. Have a look at
www.cix.co.uk/~jnewgas/ and download FTZAP from there.

It can alter the RDF files that are used for templates. The changed
RDF file can be used as a temporary template and will alter your
radio. You then must make a new template by the normal methods.

Low power settings on all newer ICOM mobile radios are not adjustable. They are fixed as a certain percentage of your full power output. The only way to get the low power to change is to tweak the main APC pot.

Does anyone have any info about Telrex antenna rotators. They were on the market many years ago and are no longer being manufactured. I have the opportunity to buy two and would like to talk to someone who has seen or used one or has an old Telrex catalog. Tnx, Jay, W4QDC, VA

Qin2,

Your cause is just, even noble.

But I've read the same message 6 times today.

How about once a day, until it is sold?

BTW .. amazing what those things cost new. Most of my friends have bought used towers, and mine is a roof tower. So I did find your msg very informative.

73...Phil

Thanks for passing along that info Mike. I hit their website
http://www.tradesafe.com and got the details. I have been wary of
conducting private purchases/sales online but with a service like
tradesafe the risk is removed ! What other services like tradesafe do
you know of ?

Having tried several, stock, the Diamond SRH805, and Diamonds new one
the SRH 519. By all means go for the 519. I really kicks butt!!.
There are sites here in Los ANgeles that I can hit with the 519 the the
stock antenna barely makes it and you can't even hear with the 805.
And it looks nice and is a thin flexable whip on a coil/sma connector.
it looks and performs great. I've had mine for 3 month now, have not had
a reason to put the other two back on.... good luck 73 de Pat KK6PD

I built several of those George. Each one worked quite well. As a
matter of fact I have one out in the garage that I had on my old VW
bus! (Yep good ole "bong technology" :>) It managed to increase
mileage by a few percent and definitely helped "ping". I have spoken
to some of my hippie friends and they believe (in between bongs hits)
that it "cools the charge" and allows the gas to burn slower. Does
that make sense? Seems that if the humidity is higher gasoline burns
better. Since I live here in Oregon, low humidity is not a problem.

4470. SWAP/FS For Hickok my Unusual Sony Reel to Reel Deck

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-14 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6ecrmf$8a8$7@csu-b.csuohio.edu>
Source record: 150450

SONY TC-560 E.S.P. Auto Reverse Reel to Reel Stereo Deck

Unusual Feature--A Full Sized/Featured Deck That Can Be Run Off of
12 Volts D.C. For Auto Use With Adapter (Not Included)

3 speeds 7.25 Inch Reels

Dual Play Selector Forward or Backward in addition to stop, fast
forward and fast reverse

- Noise Suppressor Switch
- Speakers on/off

Control Knobs For:

- Mode
- Base
- Treble
- Left/Right Volume

Selector Buttons For:
- Tape
- Aux
- Tuner
- Phono

Record Controls:

- Dual Level Meters
- Record buttons
- Mic/Aux L/R knobs (two)
- L/R Tuner knob (one)
- L/R Phono knob (one)

Auto Reverse On/Off

Unit from what I can see needs some minor repair/TLC. I do not
service them. It plays fine, however the following needs to be
addressed.

1. The tape digital counter is not working (probably needs new
belt that connects the mechanical digital counter to the
motor/reel mechanism).
2. When the unit is put in reverse the motor is heard, but
nothing happens. This again is probably an adjustment or need
of a belt.
3. One fascia philips type screw is missing from the deck's
cover.

4. The dust cover or case cover if you want to term it that is of the unit is missing.

Asking $75 or best offer, plus shipping and the actual cost of an inexpensive box purchased from the local box supplier (I make no profit on shipping or the box). You see I have a tough time trying to find larger boxes which this unit requires.

Wish consider a tube tester in trade like a Hickok (e.g. model 800, etc.) or military style tube tester.

International buyer welcome.

>
>Phil G4ZOW

I tell you what, Phil, bring your new Camaro by the shop and we'll
pull the engine and put it on the dyno and do a baseline run to determine
stock brake thermal efficiency. Then go get your GEET processor fitted
and bring it back. We'll pull the engine again and run it on the dyno. If
the brake thermal efficiency is 3 times greater as GEET is claiming,
I'll eat all testing costs. If it isn't, you pay me for all testing costs. And
if you don't trust my testing facility, I can arrange to have it tested at
any of several top NASCAR or NHRA engine builders' facilities instead.

I'm not worried that I'll be eating any testing costs. I'd love to put the
kabosh on these scamsters before they get a chance to bilk more
money out of the gullible public.

********* "RARSfest 98" *********

RALEIGH HAMFEST and COMPUTER FAIR

NORTH CAROLINA SECTION ARRL CONVENTION

SUNDAY, APRIL 5

NORTH CAROLINA STATE FAIRGROUNDS

3500 attended last year! Giant, all-indoor flea market, plus plenty
of dealers, contests, meetings and forums, prizes, VE Exams, and
the famous "Saturday Night Social."

Location: North Carolina State Fairgrounds, Jim Graham Building.

Follow the Interstate 40 to the I-440 Beltline around
Raleigh. Take exit 3 - Hillsboro St., and go west
one mile to the Fairgrounds.

Talk-in directions on the 146.64 and 147.15 Repeaters.

Date/Time: SUNDAY, April 5, 1998, 8 am to 4 pm.
(Building opens at noon Saturday, and 6 am Sunday
for dealer/vendor setup.)

Admission: Pre-register: $5 (before March 28). Gate: $6.

Flea Market: Table/2 chairs: $10 (5 or more tables: $9 each).
120 Volt AC: $15 per connection.
Drive-In unloading/loading permitted. Bring your
own extension cords and carts. Sorry, no tailgating
in the parking lot. (See address below for
registration.)

Parking: FREE on site!

VE Exams: Exams begin at 11 AM. Bring Picture ID, original
AND photocopy of license and any CSCE's. $6.25.
Contact Vince AA4MY at 919-676-4697 for VE only.

Meetings: ARRL/ARES, NTS, Army and Navy MARS, ATV, QRP,
Packet/APRS, DX.

Bill Moore NC1L, ARRL Century Club Supervisor
will present a DX forum, and provide DXCC
QSL checking.

WOUFF HONG: ARRL members are invited to take part in the
official Royal Order of the Wouff Hong induction
rites, immediately after the Social on Saturday
night. Are you a member of the Order? How will
you be tested?

-- CONTESTS --

Mobile Enter your HF mobile station.
Contest:

Homebrew Enter your homebrew projects.
Contest:

QLF Contest: "QLF" Now try sending with your Left Foot. Yes,
it's an official "left foot" sending contest, with
the largest "straight key" you've ever seen!

QBH Contest: "QBH"??? Now try sending with Both Hips. You'll
have to see, and TRY, this one to believe it. The
biggest set of keyer paddles you've ever seen!
Grass skirts optional, but may affect your chances
of winning (we're not saying which way your chances
may be affected... what shape are your knees in?)

CA$H prizes for 1st, 2nd and 3rd place winners. Not
enough to retire on, but enough to make it worth
your effort. For contest entry information, contact
Rick Merkle KA3PSK at 870-8268, or e-mail him at
ibmrick@aol.com.

General The NC State Fairgrounds hosts a permanent, general-
Flea- merchandise flea-market just outside the hamfest
Market: building. Admission to that flea-market is FREE!

Nearby Blue Ridge Cinema (14 screens, $1.50 tickets) just
Entertainment: down the block. NC Museum of Art just up the
block. Crabtree Valley Mall about 2 miles away.

FOR TICKETS For tickets, tables, etc., make checks payable to
AND TABLES "RARSfest." Include your name, call, address,
and S.A.S.E !! Mail to:

Wilbur Goss WD4RDT
SASE REQUIRED! 4425 Watkins Rd. SASE REQUIRED!
Raleigh, NC 27616

Advance ticket cutoff: March 28.

********** SEE YOU THERE FOR OUR 26TH YEAR *********

4475. FS-McKay-Dymek DR-22 SW radio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-14 00:00:00 UTC
From: bush143@postoffice.worldnet.att.net
Message-ID: <6ed21q$86n@bgtnsc02.worldnet.att.net>
Source record: 150455
Cross-posted to: rec.radio.swap,uk.radio.amatuer,rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.boatanchors

Those who know the name know the company's reputation for quality.

For those who are not familiar with the radio, it's a mid-70s hot collector's HF receiver. Its the size and shape of a 70s home stereo receiver. It has a polish silver front panel with matching knobs, and real wood side panels. The radio puts out 2 watts of audio through its built-in 4" speaker. Antenna and external speaker connections are in the back of the radio, along with a "RCA" jack marked 455 IF output.

Its in excellent condition and works like new. I have the manual, but sorry no box. No scratches or nicks on the radio. Here is some of its features as indicated on the owners manual:

* Continous coverage from 50 khz to 29.7 mhz
* Solid phase locked digital synthesis tuning
* High level RF front end for excellent intermodulation rejection and sensitivity.
* Crystal filters in first and second IF amplifiers, and ceraminc filter in third IF provide outstanding selectivity.
* Designed to use with HiFi systems, or as a self contained receiver
* Receives am, usb, lsb, and cw
* Switch selectable 4 or 8 khz bandwith
* 5000 hz audio heterodyne notch filter
* Built-in (selectable) RF preamplifier and fine tuning control.
* You do not need an external or active antenna with this radio!

The radio displays frequencies in 5 digits. The far right digit (which is three digits to the right of the decimial display) has the top 1/4 of that particular digit burn-out. This in no way interferes with the operation of the radio. You can still make out the digit.

I would like to sell this fine collectors stereo shortwave for $500 US or best offer. I will ship US or world-wide as long as you pay actual shipping cost. Thanks for reading this long ad.

4476. Tower FS. unused 70' motorized crank up tubular

Fascinating, where are they successfully being employed?

I've found that successful inventors generally have large numbers of
products on the market. They aren't paranoid about having an idea stolen
because they seldom have the time to develop them all before the market
niche they fill passes them by. Time to market is the name of the game.
That's why most products are marked "Patent Pending", if anyone bothers
to patent them at all.

OTOH unsuccessful inventor wannabes are almost invariably paranoid.
They think the world is out to steal their ideas. They must be, because
people aren't *buying* their ideas. The unsuccessful inventor never seems
to realize that there's a *reason* why people aren't buying their ideas.

And I have just the spectrum analyzers to gather it, as does any reasonably
equipped radio shop. It is simple enough to prove your claims. You can even

keep your boxes sealed for all I care. All I need is to be able to sample the signal being sent between transmitter and receiver in order to measure its bandwidth. If it is passing full fidelity music in realtime, the bandwidth will be greater than 100 Hz, or the required SNR will be so unreasonably high that it will be of no practical use. Shannon's capacity bound won't be denied.

Shannon's capacity bound is C=B*ln(1+S/N). Transposed to solve for required S/N it is S/N=exp(C/B)-1. Substituting in a bandwidth B of 100 Hz and a required capacity of C=44,000 (Nyquist limit for CD quality music), the required SNR in db is 1911 db. Even if we'll accept speech quality (C=5000) audio, the required SNR for a 100 Hz bandwidth is 434.3 db. That's totally useless, and a far cry from the 19.5 db SNR required for CD quality music in a 10 kHz bandwidth, or the 1.16 db SNR required in a 165 kHz bandwidth. (Of course these are theoretical bests, in practice we can't achieve CD quality with transmission link SNRs that low, and neither can you.)

I expect you've fallen into the same trap that Petit did when he first published his Clover system in 73 Magazine. He claimed a 2 Hz bandwidth. The actual bandwidth is 500 Hz. The problem was his spectrum analyzer didn't catch the sidebands because they were below its noise floor, but not below the noise floor of the Clover receiver in his test setup.

Common spectrum analyzers have a noise floor of -80 dbm to -100 dbm while most receivers have a noise floor of -120 dbm to -140 dbm. So a faulty test setup led him to claim theoretically impossible results. When it was measured more carefully with a signal level that was above the spectrum analyzer noise floor, the truth came out. Clover is good, but it isn't better than theoretically possible good. And neither is anything else, not your music system, and not the GEET processor.

In fact they have to. Rewriting physical law can't negate any previous
observable. If it does, then your rewrite is incorrect. New theories
can't negate any of the observable results of prior theory. When
Einstein's theory displaced Newton's theory, apples still fall from
apple trees.

They don't license anything under 100 watts (except translators and boosters), but they don't allow anything that is not licensed. It's not a loophole. One of the guys who tried that just got fined $5,000, and an appeals court upheld the fine.

hello Paul
I realise this is not, necessarily, the answer you are looking for,
however, have you considered getting one of those, fairly,
inexpensive, scanners, like those from radio shack, and use it. I
realise this would be more expensive but you would have the
flexibility of what you want plus the ablility to change frequency as
your receiving interests change, eg, a qso on that repeater might
decide to qsy and you would then have the opion, range permiting, to
follow them.
Just a thought.
Larry ve3fxq

4501. FS: Icom 730 HF RIG Must SELL!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-14 00:00:00 UTC
From: Julie Sandstrom <jsandst@eot.com>
Message-ID: <01bd4f4f$90037bc0$9c1069d1@default>
Source record: 150481
Cross-posted to: rec.radio.amateur.equipment,rec.ham-radio.swap,rec.radio.amateur.swap

I have an Icom IC-730 HF rig for sale. This is a solid state older unit and
is in good condition. It has 80-10 meters with the
WARC bands. There is some minor scratching on the sides but the front is
cosmetically beautiful. Functionally it works flawlessly
and comes with the origional microphone and manuals. This unit has the
quad-conversion reciever so you KNOW that it will be
SENSITIVE!! I will also include with the radio a Radio Shack dsp filter! I
am asking $375 for the set.. Please send e-mail to the
address listed below if you have any questions.

4503. **FS: Cellular Bag Phone with lots of accessories**

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-14 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19980314145801.JAA01348@ladder01.news.aol.com>
Source record: 150483

Hey there...

I have a Technophone 900 (clone of a Nokia) Transportible Cellular Phone for sale (or trade). Condition is about 5/10, but it works 100%!! Will work on the Analog (standart 800 MHz) system (both A and B carriers). Includes the Transceiver Unit, the Handset (with the cord), the 12 VDC plug (for connecting a ciggarrete ligher cord), original manual (in both Engligh and Spanish), two antennas, one is the "Rubber Duck" type which connects directly to the TNC connecter on the transciever unit, and a "Trunk Mount" mobile antenna, also with the cord and TNC connecter. Plus I also have some "Programming Info" for it. One more thing, the handset of the unit is in a abit or a rough shape (there's a scratch
going through the LCD) but the LCD functions perfictly. (Basicly only the handset is in rough shape, all else is in great shape.) Makes a great "Emergency Cell Phone" beause you can make 911 calls for free. This unit works 100% Asking $25 +
shipping. I am in the Philadelphia, PA area.

Body handling: Binary attachment payload not displayed: vcard.vcf

Welcome!

There is a new channel on IRC. It is called #CB_Radio. It is on the undernet servers, so as long as you get on one of the undernet servers you will find it.
I am sending this out to several groups in the NG's, so please, come one come all. It will be a good way for people to chit chat and get to know one another and buy,sell, trade their goods.

If you do not have a program to access IRC, then you can get a copy of mIRC 5.3 on our web page at http://www.e-tex.com/cbcity

I hope to see you there, and have a great weekend

Dean Arthur
CB City Manager

When buying goods from private parties over the net, (or any type
of long distance transaction where you can't see the goods).
I'd recommend using an escrow service to act as a third party.

For a small fee, these services hold on to the money while
the goods change hands. They have the tracking numbers,
which allows them to monitor the whole process.

I've used a service called "TradeSafe", and was quite satisfied.
There are also services which are cheaper, and some which allow
you to pay via credit card, which drastically speeds up the process.

Mike

>Benjamin Blavat, KF4KJF

I've got one. It is cheaper than other tuners because it's a kit (Ok there's a W&T version available now). And it is cheaper because it can only handle 100 watts (though that's generally enough). It is basically an L network which is reversable under firmware control. Tuning is in discrete steps by relay. It often can't achieve a *perfect* match, but it can generally get down below 2:1 which is usually all you need. And its tuning range isn't *that* wide. There are load impedances that will cause it to spit and spark. Still, it is a pretty good tuner for what it is, and that's basically a line flattener. If you don't ask too much from it, it can deliver.

From: jsimon@erols.com
Message-ID: <6ecms3$92d$1@winter.news.erols.com>
Source record: 150543

If anyone can help me with the following it would be greatly appreciated.

I'm looking for a special driver transistor produced by General Electric for Q4 on the Transmit strip of a GE MASTR Imperial mobile UHF radio produced in the late '60's to early '70's. The component is a stud or flange mounted (not sure but I believe it is a stud mounted one) common-emitter operated broad band driver amplifier. The whole transmitter assembly is called a wide spaced transmitter and labeled KT-16-A. The GE part number is 19A129283P3.

Thanks for your help!

4529. Contesting Trailer

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-15 00:00:00 UTC
From: Murray Lycan <ve7ha@lightspeed.bc.ca>
Message-ID: <350C1C36.7AA32DB5@lightspeed.bc.ca>
Source record: 150301

I have a 33 foot trailer that I think could be useful as a contest station
in a fixed remote location up on a mountain, for example. I wish I had access to land for this reason since its value for this purpose is far greater than what I can get for the trailer in dollars.

The trailer is located in the Vancouver, B.C, Canada area. It is an old-timer
that we bought in 1996. We upgraded it so we could live in it ourselves. The trailer has a living room, kitchen, two other rooms, plus a full bathroom
with sink, bathtub/shower, toilet. The trailer has 2 doors. When we bought
the trailer, it was located at its current location and skirted like a mobile home, so I don't know what kind of wheels it has under it. The trailer has been used as a mobile home with permanent septic and electrical hookup and oil-fired Intertherm furnace providing forced-air heat into each room. The furnace was professionally serviced last year. The furnace appears much newer than the trailer itself. We lived through two winters comfortably.

We had a professional plumber completely renovate the plumbing to the kitchen and bathroom. He installed a new hot water tank at that time that is the same size as used in houses so there is endless hot water for showers or baths unlike many trailers. We also installed a new toilet and stainless steel dual kitchen sink with Moen faucet. We had an electrician install a new electrical distribution box including adding 220 volt wiring and plug outlet for a linear amplifier.

Anybody interested?

From: John@datasafe.demon.co.uk
Message-ID: <350e16bc.29066053@news.demon.co.uk>
Source record: 150315

Hi Tony,

Thanks for the reply.

The rig is the infamous IC706 Mk1 and the antenna is an Alinco HF
multi band whip which is designed for 3.5 thro' 28 megs.

I have mounted the SGC230 as near to the base of the antenna as
possible and have a short wire connecting to the tuner. I have on
occasions managed to tune the antenna(following the chattering of
relays) but, when I return to the frequency having tried another band,
the 'tune' is lost and fails to tune - no relay chattering.

I did suspect that the rigs protection was the problem and wonder
whether there is any solution.

The total whip length is 9'

How do you find the unit?

Regards

John

Zaurus ZR-5800 and just about everything related to it!

This package goes beyond complete. Check out the list below, both Windows and Macintosh platforms are covered, and all the accessories you could want (well, all the accessories _I_ ever wanted. :-)

Everything is in great condition, well cared for, ready to use. The Zaurus itself is in pristine condition, no scratches; it's lived in the padded leather case all it's life.

I've put the current prices from the Rupp catalog (www.mobilescape.com) rounded up to the nearest dollar) beside everything so you can see what a great deal this is.

If everything was purchased new today this would be over $1000 worth of organizer and extras,.

First $500 offer gets it. If you can't afford $500, send me your best offer, I'll consider it. Please don't send me offers on parts, I want to sell this as a bunch.

So what's it include?
The Zaurus itself, model ZR-5800, with 2MB RAM, Modem, Backlight, Spreadsheet, Compuserve link, Addresses, Notes, Calendar, etc. ($400)

Two Cases:
Deluxe leather case ($60)
Soft Naugahide case ($10)

2 PC connector cables ($50 each)
1 Mac connector cable ($50)
1 PC Infrared connector cable ($90)
2 AC Power supplies ($15 each)

1 MB PCMCIA Card (~$130)

Oak desk stand and stylus ($50)

Zaurus link software PC ($15)
Zaurus link software Mac ($15)

Game Pack: Poker, Othello, Mastermind ($50)

Extra (Damaged) ZR-5800, for spare parts(?) ($???)

Back-Issues of Digital Ink magazine - Tons of Zaurus use tips. (Year's subscription was $30)

ALL FOR ONLY $500!

Reply to the address _below_ after you've removed the spamblock spaces.

You many need advice from another IC-706 Mk1 user. I don't know whether there's any way to increase the output when the mismatch is excessive.

> How do you find the unit?

I never had any problems with the tuner. I had a Yaesu FT890 in a ground floor room of a townhouse and put the SG-230 up on the flat roof with a coax line to the tuner and a wire aerial from that across the road to a neighbour's house. It was pretty QRP, but it got out and I never had a problem getting the SGC tuner to rapidly produce a good VSWR in the downlead coax.

If no IC-706 owners chip in here (and you might try asking also in rec.radio.amateur.antenna) then maybe Icom or SGC can help.

Good luck.

Source record: 150328

You won't hear any more chattering if the freq is stored in
memory on the tuner and you return to it. It just goes back to
that setting. Also, the fuse inside the 230 is a little low rated
and blows on occassion. Get you're power screw driver out and
have at all them little phillips's.
A 9' rod is not exactly a great choice. SGC's whip is a helical
and presents a lower electrical profile to the tuner. I have had
decent results with 80m and 40m hamsticks (inspite of what they
say about them, they are convienient with this tuner).

Anyone have either of these filters forsale for the 850?

4563. HTX-212,noise problem.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-15 00:00:00 UTC
From: "Brien G. McCrea" <brienm@worldnet.att.net>
Message-ID: <6ei2gc$rn6@bgtnsc03.worldnet.att.net>
Source record: 150335

My HTX-212 recently started making a noise that sounds like "rushing water" along with the recieved signal. At first I thought that it was a problem with the local repeater, but then I realized that it happens on all frequencies. It does not appear to make the noise when the squelch is open with no signal being received so I think that rules out a defective audio output circuit. In some cases the noise can actually be louder than the received signal depending on signal strength.

Has anyone else experienced and/or solved this problem?

If the wattmeter is showing that in SSB mode you are OK. What does the
meter show in CW or FM mode???

4565. Transmitter for serial port

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-15 00:00:00 UTC
From: "Marcus P. Hays" <pico1@worldnet.att.net>
Message-ID: <6ei8bs$oa1@bgtnsc02.worldnet.att.net>
Source record: 150337

I was thinking that it would be neat to in some way attach a transmitter to a serial port so that I could write programs to control a radio controlled car. So anyway, I was wondering if anybody knew of somewhere i could get a transmitter like this or had any ideas about where I could look.

Thanks in advance

Marcus Hays

From: Bob McKay <r.mckay-guyton@worldnet.att.net>
Message-ID: <6ei8u2$cdl@bgtnsc03.worldnet.att.net>
Source record: 150339

Greetings;

Does anyone out there know how to delete the programmed freqs in the vfo memories on an Icom 271H? I recently got one, with manual, (which says nothing about deleting), and have some odd freqs from the previous owner or owners. Any help appreciated. (or email)

Source record: 150340
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have for sale an Icom IC-551D Six Meter All-Mode Radio and A.R.R.
GASFET preamp. The rig is in excellent condition, both electronically
and cosmetically. It comes with all documentation, hand mic and the
original box.
An A.R.R. GASFET preamp is installed inside the radio, but it is plenty
sensitive without it. I recently purchased a new rig, so I do not need
this one. This radio is an excellent 6M base rig and will be great for
the upcoming sporadic E season.
Asking $525.00
Please reply via email.

73,
Allen KA5CJJ

I remember my roomate building one from a Mother Earth News article in the
`70's on water injectors to help supress detonation in high-compression
engines using crappy gas. It worked pretty well. It was basic bong tech
(and thus within the range of the average MEN reader's capabilities! (-: )
It basically guffed a little water vapor from a resivoir into a vaccuum
hose. Made my roomate's Belvedere quit dieseling, I must say.

Hello,

Thanks for reading our "Press Release". We are excited to
announce the Release of "The Original Southern California Repeater
Location Guide". This exciting and most up to date guide available is
now on the Net. With the most complete listings of all Open and Closed
repeaters for 2-meters, 220 MHz, 440 MHz, 1.2 GHz, 6 & 10 Meters in
Southern California, you will see why this guide is one of the most
sought after directory available. Find out more at...

4575. Guide to the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6ehnha$eqj@news.Hawaii.Edu>
Source record: 150347
Cross-posted to: rec.radio.amateur.equipment,rec.radio.broadcasting,rec.radio.cb,rec.radio.info

Archive-name: radio/personal-intro
Revision: 2.2 98/14/05 03:50:23
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschlect@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.
